Fuzzy Linear Programming: Solution Techniques and Applications Seyed Hadi Naseri, Ali Ebrahimnejad, Bing-Yuan Cao, 2019-05-29

This book presents the necessary and essential backgrounds of fuzzy set theory and linear programming particularly a broad range of common Fuzzy Linear Programming FLP models and related convenient solution techniques These models and methods belong to three common classes of fuzzy linear programming namely i FLP problems in which all coefficients are fuzzy numbers ii FLP problems in which the right hand side vectors and the decision variables are fuzzy numbers and iii FLP problems in which the cost coefficients the right hand side vectors and the decision variables are fuzzy numbers The book essentially generalizes the well known solution algorithms used in linear programming

to the fuzzy environment Accordingly it can be used not only as a textbook teaching material or reference book for undergraduate and graduate students in courses on applied mathematics computer science management science industrial engineering artificial intelligence fuzzy information processes and operations research but can also serve as a reference book for researchers in these fields especially those engaged in optimization and soft computing For textbook purposes it also includes simple and illustrative examples to help readers who are new to the field

Integer Programming and Related Areas C. Kastning, 2013-11-11 Integer Programming is one of the most fascinating and difficult areas in the field of Mathematical Optimization Due to this fact notable research contributions to Integer Programming have been made in very different branches of mathematics and its applications Since these publications are scattered over many journals proceedings volumes monographs and working papers a comprehensive bibliography of all these sources is a helpful tool even for specialists in this field I initiated this compilation of literature in 1970 at the Institut für Konometrie und Operations Research University of Bonn Since then many collaborators have contributed to and worked on it Among them Dipl Math Claus Kastning has done the bulk of the work With great perseverance and diligence he has gathered all the material and checked it with the original sources The main aim was to incorporate rare and not easily accessible sources like Russian journals preprints or unpublished papers Without the invaluable and dedicated engagement of Claus Kastning the bibliography would never have reached this final version For this reason he must be considered its responsible editor As with any other collection this literature list has a subjective viewpoint and may be in some sense incomplete We have however tried to be as complete as possible The bibliography contains 4704 different publications by 6767 authors which were classified by 11839 descriptor entries
