Compositionality and Concepts in Linguistics and Psychology James A. Hampton,Yoad Winter,2017-09-19 By highlighting relations between experimental and theoretical work this volume explores new ways of addressing one of the central challenges in the study of language and cognition The articles bring together work by leading scholars and younger researchers in psychology linguistics and philosophy An introductory chapter lays out the background on concept composition a problem that is stimulating much new research in cognitive science Researchers in this interdisciplinary domain aim to explain how meanings of complex expressions are derived from simple lexical concepts and to show how these meanings connect to concept representations Traditionally much of the work on concept composition has been carried out within separate disciplines where cognitive psychologists have concentrated on concept representations and linguists and philosophers have focused on the meaning and use of logical operators This volume demonstrates an important change in this situation where convergence points between these three disciplines in cognitive science are emerging and are leading to new findings and theoretical insights This book is open access under a CC BY license [Handbook of Terminology](#) Hendrik J. Kockaert,Frieda Steurs,2015-03-13 Terminology has started to explore unbeaten paths since W ster and has nowadays grown into a multi faceted science which seems to have reached adulthood thanks to integrating multiple contributions not only from different linguistic schools including computer corpus variational socio cognitive and socio communicative linguistics and frame based semantics but also from engineering and formal language developers In this ever changing and diverse context Terminology offers a wide range of opportunities ranging from standardized and prescriptive to prototype

and user based approaches At this point of its road map Terminology can nowadays claim to offer user based and user oriented hence user friendly approaches to terminological phenomena when searching extracting and analysing relevant terminology in online corpora when building term bases that contribute to efficient communication among domain experts in languages for special purposes or even when proposing terms and definitions formed on the basis of a generally agreed consensus in international standard bodies Terminology is now ready to advance further thanks to the integration of meaning description taking into account dynamic natural language phenomena and of consensus based terminology management in order to help experts communicate in their domain specific languages In this Handbook of Terminology HoT the symbiosis of Terminology with Linguistics allows a mature and multi dimensional reflection on terminological phenomena which will eventually generate future applications which have not been tested yet in natural language The HoT aims at disseminating knowledge about terminology management and at providing easy access to a large range of topics traditions best practices and methods to a broad audience students researchers professionals and lecturers in Terminology scholars and experts from other disciplines among which linguistics life sciences metrology chemistry law studies machine engineering and actually any expert domain In addition the HoT addresses any of those with a professional or personal interest in multilingual terminology translation interpreting localization editing etc such as communication specialists translators scientists editors public servants brand managers engineers intercultural organization specialists and experts in any field Moreover the HoT offers added value in that it is the first handbook with this scope in Terminology which has both a print edition also available as a PDF e book and an online version For access to the Handbook of Terminology Online please visit <http://www.benjamins.com/online/hot>

The HoT is linked to the Handbook of Translation Studies not in the least because of its interdisciplinary approaches but also because of the inevitable intertwining between translation and terminology All chapters are written by specialists in the different subfields and are peer reviewed New Insights into the Semantics of Legal Concepts and the Legal Dictionary Martina Bajčić, 2017-04-12

This book focuses on legal concepts from the dual perspective of law and terminology While legal concepts frame legal knowledge and take center stage in law the discipline of terminology has traditionally been about concept description Exploring topics common to both disciplines such as meaning conceptualization and specialized knowledge transfer the book gives a state of the art account of legal interpretation legal translation and legal lexicography with special emphasis on EU law The special give and take of law and terminology is illuminated by real life legal cases which demystify the ways courts do things with concepts This original approach to the semantics of legal concepts is then incorporated into the making of a legal dictionary thus filling a gap in the theory and practice of legal lexicography With its rich repertoire of examples of legal terms in different languages the book provides a blend of theory and practice making it a valuable resource not only for scholars of law language and lexicography but also for legal translators and students **The Bloomsbury Handbook of**

Klikushina, 2014-06-26 This book is a collection of articles in English, German and French which were presented at the 3rd International Linguistics Conference on the Questions of the Theory of the Language and Methodology of Teaching Foreign Languages in Taganrog, Russia. The conference gathered many scholars both experienced and young from Belarus, Ukraine, Poland, Uzbekistan, Germany, Spain, Italy, Iran, Jordan, Malaysia, Greece, India, Turkey, Algeria, the Netherlands and Albania and from the cities of Russia, namely Moscow, St. Petersburg, Belgorod, Tambov, Volgograd, Saratov, Rostov on Don, Krasnodar and Stavropol. Great attention is paid in this volume to the functioning of different levels of linguistic units and categories of speech with regard to the factors of intra and cross-cultural communication and pragmatics of speech. The theory of language and speech is represented not only in synchrony but in diachrony as well in the comparative and typological aspects of the material of languages from different cultural groups including non-literate languages such as the Ket language. The ideas of internal and external forms of the word and deep and surface structures of the language are also examined in this volume. A further subject of discussion here is the problem of translation and the relation of language and speech, text and discourse. The study of the problem of language and speech in comparative terms and in the treatment of a variety of modern trends in linguistics gives the picture of a universal mechanism for mainstreaming as the process of translating the word of the language in question. This volume represents some of the most interesting and important ideas and researches in the field of linguistics. The book consists of six parts, namely: theoretical linguistics, lexicology, text pragmatics, ethnolinguistics and translation and language teaching methods. This collection of essays will be of great interest to scholars in the fields of philology, linguistics, culture and humanities and will be of particular interest to philologists, linguists, specialists in studying culture, students and postgraduate students majoring in the humanities as well as those interested in issues of language culture and language teaching methods.

Meaning, Discourse and Society Wolfgang Iser, 2010-03-25 *Meaning, Discourse and Society* investigates the construction of reality within discourse. When people talk about things such as language, the mind, globalisation or weeds, they are less discussing the outside world than objects they have created collaboratively by talking about them. Wolfgang Iser shows that meaning cannot be found in mental concepts or neural activity as implied by the cognitive sciences. He argues instead that meaning is negotiated and knowledge is created by symbolic interaction, thus taking language as a social rather than a mental phenomenon. Discourses, Iser contends, can be viewed as collective minds enabling the members of discourse communities to make sense of themselves and of the world around them. By taking an active stance in constructing the reality they share, people thus can take part in moulding the world in accordance with their perceived needs.
