Climate Vulnerability ,2013-03-15 Climate change has been the subject of

thousands of books and magazines scientific journals and newspaper articles daily It s a subject that can be very political and emotional often blurring the lines between fact and fiction The vast majority of research studies projections and recommendations tend to focus on the human influence on climate change and global warming as the result of CO2 emissions often to the exclusion of other threats that include population growth and the stress placed on energy sources due to emerging global affluence Climate Vulnerability Five Volume Set seeks to strip away the politics and emotion that surround climate change and will assess the broad range of threats using the bottom up approach including CO2 emissions population growth emerging affluence and many others to our five most critical resources water food ecosystems energy and human health Inclusively determining what these threats are while seeking preventive measures and adaptations is at the heart of this unique reference work Takes a Bottom Up approach addressing climate change and the threat to our key resources at the local level first and globally second providing a more accurate and inclusive approach Includes extensive cross referencing which is key to readers as new connections between factors can be discovered Cuts across a number of disciplines and will appeal to Biological Science Earth Environmental Science Ecology and Social Science comprehensively addressing climate change and other threats to our key resources from multiple perspectives *Rights Resources and Rural Development* Christo Fabricius,2013-01-11 Community based natural resource management CBNRM is an approach that offers multiple related benefits securing rural livelihoods ensuring careful conservation and management of biodiversity and other resources and empowering communities to manage these resources sustainably Recently however the CBNRM concept has attracted criticism for failing in its promise of delivering significant local improvements and conserving biodiversity in some contexts This book identifies the flaws in its application which often have been swept under the carpet by those involved in the initiatives The authors analyse them and propose remedies for specific circumstances based on the lessons learned from CBNRM experience in southern Africa over more than a decade The result is essential reading for all researchers observers and practitioners who have focused on CBNRM in sustainable development programmes as a means to overcome poverty and conserve ecosystems in various parts of the globe It is a vital tool in improving their methods and performance In addition academics students and policy makers in natural resource management resource economics resource governance and rural development will find it a very valuable and instructive resource Democratic Management of an Ecosystem Under Threat Kelly Dunning,2023-07-11 Using case studies from Florida and the Caribbean region this book summarizes the state of coral reef conservation today The question this book answers is what is the best way to protect the vulnerable coral reefs with an ever worsening climate crisis The book s contribution is looking closely at people s avenues to participate in coral reef management and how the public is increasingly making their voices heard in the management process Urbanization, Biodiversity and Ecosystem Services: Challenges and Opportunities Thomas Elmqvist,Michail Fragkias,Julie Goodness,Burak Güneralp,Peter J. Marcotullio,Robert I. McDonald,Susan Parnell,Maria Schewenius,Marte

Sendstad, Karen C. Seto, Cathy Wilkinson, 2013-09-21 Urbanization is a global phenomenon and the book emphasizes that this is not just a social technological process. It is also a social ecological process where cities are places for nature and where cities also are dependent on and have impacts on the biosphere at different scales from local to global. The book is a global assessment and delivers four main conclusions: Urban areas are expanding faster than urban populations. Half the increase in urban land across the world over the next 20 years will occur in Asia, with the most extensive change expected to take place in India and China. Urban areas modify their local and regional climate through the urban heat island effect and by altering precipitation patterns, which together will have significant impacts on net primary production, ecosystem health and biodiversity. Urban expansion will heavily draw on natural resources, including water, on a global scale and will often consume prime agricultural land, with knock-on effects on biodiversity and ecosystem services elsewhere. Future urban expansion will often occur in areas where the capacity for formal governance is restricted, which will constrain the protection of biodiversity and management of ecosystem services.

Socio-Environmental Regimes and Local Visions Minerva Arce

Ibarra, Manuel Roberto Parra Vázquez, Eduardo Bello Baltazar, Luciana Gomes de Araujo, 2020-09-13 This book presents oral histories, collective dialogues and analyses of rural and indigenous livelihoods facing global socio-environmental regime change in Latin America. Since the late twentieth century, rural and indigenous producers in Latin America, including agriculturists, coffee growers as well as small-scale farmers, fishers and others, have had to resist, cope with or adapt to a range of neoliberal socio-environmental regimes that impact their territories and associated resources, including water production systems and ultimately their cultural traditions. In response, rural producers are using local visions and innovation niches to decide what, when and how to resist, cope with uncertainty and still be successful in using their customary laws to retain their land rights and livelihoods. This book presents a range of ethnically diverse case studies from Latin America which addresses socio-environmental, educational and law regimes, effects using transdisciplinary research approaches in rural traditional and indigenous production systems. Based on both the results and insights gained into how producers are resisting and adapting to these regimes, as well as decades of research carried out in Latin American rural territories by the participating authors, the book puts forward a baseline for devising new public policies that are better suited to the real challenges of livelihoods, poverty and environmental degradation in Latin America. These recommendations are rooted in post-development thinking, they promote territorial public policy with social inclusion and a human rights approach. The book draws on over 20 years of research carried out by Latin American academics and their undergraduate and graduate students who have addressed collaborative work, participatory research and transdisciplinary approaches with rural commons and communities in Latin America. It features 19 case studies with contributions from Argentina, Bolivia, Brazil, Colombia, Cuba, Honduras and Mexico.
