Developing Novel Spinning Methods to Fabricate Continuous Multifunctional Fibres for Bioapplications Azadeh Mirabedini, 2018-07-23 This book describes the development of three dimensional electroactive fibres using a novel coaxial wet spinning approach from organic conductors in combination with non conducting hydrogel polymers. This book also presents the characterization and evaluation of multiaxial biofibres in terms of mechanical, physical, electrochemical and biological properties and explores their use in a diverse range of applications including implantable electrodes, drug delivery systems and energy storage systems. In the first chapter the author highlights the significance of engineering three dimensional fibres, introduces the involved hydrogels and organic conductors with emphasis on their biomedical application and collects some of the previously established methods for fabrication of biofibres. In the second chapter particular attention is given to the overall experimental fabrication methods and characterization analyses conducted in the work. Chapters three to five present the main findings of this work in which readers will discover how novel hybrid hydrogel fibres with an inner core of chitosan and alginate were prepared and characterized, how graphene was incorporated into coaxial wet spun biofibres and how one dimensional triaxial fibres were developed using a novel coaxial wet spinning fibre production method and applied as potential battery devices. In the final chapter of this work the author summarizes the main achievements of the work and outlines some recommendations for future research.

Nanostructures and Nanoconstructions based on DNA Yuri M. Yevdokimov, V.I. Salyanov, S.G. Skuridin, 2012-06-04 Evolutionally optimized biomolecules and their complexes present attractive objects in the production of functionalized nanoobjects. Nanotechnology and Functional Foods Cristina Sabliov, Hongda Chen, Rickey Yada, 2015-04-21 The continued advancement in the sciences of functional foods and nutraceuticals has clearly established a strong correlation between consumption of bioactives and improved human health and performance. However, the efficacy and bioavailability of these bioactive ingredients e.g. omega 3 oils, carotenoid antioxidants, vitamins and probiotic bacteria in foods often remains a

challenge due to their instability in food products and gastrointestinal tract as well as their limited bioavailability. In some cases these bioactive ingredients may impart an undesirable organoleptic characteristic to the final product which hinders acceptance by consumers. In addressing these challenges development of effective delivery systems is critical to meet the consumer needs for effective bioactives. The scientific knowledge behind developing effective delivery of bioactive components into modern and wide ranging food products will be essential to reap their health promoting benefits and to support the sustained growth of the functional foods market. *Nanotechnology and Functional Foods: Effective Delivery of Bioactive Ingredients* explores the current data on all aspects of nanoscale packing, carrying and delivery mechanisms of bioactive ingredients to functional foods. The book presents various delivery systems including nano emulsions, solid lipid nanoparticles and polymeric nano particles, their properties and interactions with other food components and fate in the human body. Later chapters emphasize the importance of consumers attitude towards nano delivery for the success of the technology and investigate the challenges faced by regulatory agencies to control risks and harmonize approaches worldwide. The wide applicability of bioactive delivery systems with the purpose of improving food quality, food safety and human health will make this book a worthy reference for a diverse range of readers in industry, research and academia.

Surfactants in Solution. K.L. Mittal, P. Botherel, 2012-12-06. This and its companion Volumes 5 and 6 document the proceedings of the 5th International Symposium on Surfactants in Solution held in Bordeaux, France, July 9-13, 1984. This symposium was the continuation of the series of symposia initiated in 1976 in Albany, New York, under the title *Micellization, Solubilization and Microemulsions*. The next two symposia were labelled *Solution Chemistry of Surfactants* and *Solution Behavior of Surfactants: Theoretical and Applied Aspects*, held in Knoxville, TN in 1978 and Potsdam, NY in 1980 respectively. In 1982, at the time of the 4th Symposium in this series, it became amply evident that there was a definite need to have more of a generic title to describe these biennial events and after much deliberation it was decided that an appropriate title would be *Surfactants in Solution*, as both the aggregation and adsorption aspects of surfactants were addressed. So the 4th Symposium was held in 1982 in Lund, Sweden, under this new rubric and it was

decided to continue these symposia in the future under this appellation Naturally the Bordeaux Symposium was dubbed as the 5th International Symposium on Surfactants in Solution and our logo became SIS which is very apropos and appealing It was in Bordeaux that the decision was made to hold the 6th SIS Symposium in New Delhi and it is scheduled for August 18 22 1986 in the capital of India **Encyclopedia of Optical Engineering: Las-Pho, pages 1025-2048** Ronald G.
