Lisp An Interactive Approach:

Common LISP Stuart Shapiro,1991-08-01 *Common LISP* Stuart Charles Shapiro,1992 The text uses a tutorial style that focuses on learning by interaction and experimentation **LISP** Stuart Charles Shapiro,1986 *LISP* Stuart Shapiro,1986-01-01 Common Lisp in an Interactive Approach Henry Coleman,2017-02-03 Your goal for this chapter is to learn how to access your system's Common Lisp and how to exit from it Although this may not seem like much it is obviously very important It is also very dependent on the particular system you are using so you will have to get much of the information from a manual a teacher a consultant or a friend The first problem is to log onto your computer system This might involve simply turning on your microcomputer or it might require typing in some accounting information If you are using a Lisp machine or have booted a microcomputer with a Common Lisp disk you may already be talking to Common Lisp Otherwise you will have to access it This might require just typing `lisp cl` some abbreviation of the implementation of Common Lisp that you are using or it might require first retrieving the Common Lisp system *Signal*,1987

Briggle,P.A.E. Brey,K. Waelbers,2008-06-20 The theme of this volume is the multi faceted computational turn that is occurring through the interaction of the disciplines of philosophy and computing In computer and information sciences there are significant conceptual and methodological questions that require reflection and analysis Moreover digital information and communication technologies have had tremendous impact on society which raises further philosophical questions This book

tries to facilitate the task to continuously work to ensure that its diversity of perspectives and methods proves a source of strength and collaboration rather than a source of instability and disintegration The first three contributions explore the phenomenon of virtual worlds The next four focus on robots and artificial agents Then a group of chapters discusses the relation between human mentality and information processing in computers and the final section covers a broad range of issues at the interface of computers and society

The Closed World Paul N. Edwards, 1996 The Closed World offers a radically new alternative to the canonical histories of computers and cognitive science Arguing that we can make sense of computers as tools only when we simultaneously grasp their roles as metaphors and political icons Paul Edwards shows how Cold War social and cultural contexts shaped emerging computer technology and were transformed in turn by information machines The Closed World explores three apparently disparate histories the history of American global power the history of computing machines and the history of subjectivity in science and culture through the lens of the American political imagination In the process it reveals intimate links between the military projects of the Cold War the evolution of digital computers and the origins of cybernetics cognitive psychology and artificial intelligence Edwards begins by describing the emergence of a closed world discourse of global surveillance and control through high technology military power The Cold War political goal of containment led to the SAGE continental air defense system Rand Corporation studies of nuclear strategy and the advanced technologies of the Vietnam War These and other centralized computerized military command and control projects for containing world scale conflicts helped closed world discourse dominate Cold War political decisions Their apotheosis was the Reagan era plan for a Star Wars space based

ballistic missile defense Edwards then shows how these military projects helped computers become axial metaphors in psychological theory Analyzing the Macy Conferences on cybernetics the Harvard Psycho Acoustic Laboratory and the early history of artificial intelligence he describes the formation of a cyborg discourse By constructing both human minds and artificial intelligences as information machines cyborg discourse assisted in integrating people into the hyper complex technological systems of the closed world Finally Edwards explores the cyborg as political identity in science fiction from the disembodied panoptic AI of 2001 A Space Odyssey to the mechanical robots of Star Wars and the engineered biological androids of Blade Runner where Information Age culture and subjectivity were both reflected and constructed Inside
