Forms Of Attention:

Forms of Poetic Attention Lucy Alford, 2020-01-28 A poem is often read as a set of formal technical and conventional devices that generate meaning or affect. However, Lucy Alford suggests that poetic language might be better understood as an instrument for tuning and refining the attention. Identifying a crucial link between poetic form and the forming of attention, Alford offers a new terminology for how poetic attention works and how attention becomes a subject and object of poetry. *Forms of Poetic Attention* combines close readings of a wide variety of poems with research in the philosophy, aesthetics, and psychology of attention. Drawing on the work of a wide variety of poets such as T. S. Eliot, Wallace Stevens, Frank O'Hara, Anne Carson, Theresa Hak Kyung Cha, Harryette Mullen, Al Khans, Rainer Maria Rilke, Arthur Rimbaud, and Claudia Rankine, Alford defines and locates the particular forms of attention poems both require and produce. She theorizes the process of attention, making its objects, its coordinates, its variables, while introducing a broad set of interpretive tools into the field of literary studies. *Forms of Poetic Attention* makes the original claim that attention is poetry's primary medium and that the forms of attention demanded by a poem can train, hone, and refine our capacities for perception and judgment on and off the page.

Attention and consciousness in different senses Naotsugu Tsuchiya, Jeroen J. Van Boxtel, 2013-06-03 Although often used in everyday speech and in the scholarly literature, selective attention and consciousness lack clear, undisputed definitions. Partly because of this deficit, there exists a lively debate on the relationship between the two. Nevertheless, attention has been studied scientifically for a long time because a variety of tasks allow researchers to control several of its aspects, e.g., focused and feature-based attention. Consciousness as a scientific subject of study has emerged more recently but is now rapidly gaining traction. Scientific studies of consciousness concern the state or level of consciousness, e.g., awake as opposed to in coma, dreamless sleep, or under anaesthesia, as well as the contents of consciousness or the phenomenology of perception. With the increase in consciousness-focused research, there is a concomitant surge in research examining the relationship between attention and consciousness. This relationship between attention and consciousness is the topic of this Research Topic. Contributions related to or focused solely on attention or on consciousness will not be considered. It had long been assumed that attention and consciousness are inextricably intertwined, two sides of the same coin. However, recently substantial evidence has emerged that attention and consciousness are interacting but separable processes. It is, however, debated how tight the interactions are and what the exact nature of the relationship is. Therefore, we invite researchers from different camps to provide opinionated but balanced literature reviews. Different groups will interpret the same data in different ways. We feel that combining these views in one Research Topic is immensely valuable to researchers from different fields. Apart from reviews, we also invite potential contributors to provide new and exciting evidence in the form of original contributions that may support any of the different views. Even though attention and consciousness are critical aspects of many different cognitive processes, they are mainly studied though not

exclusively in the domain of visual perception In other sensory modalities e g olfaction or audition it is currently not clear whether distinctions between attention and consciousness exist which is even more true for other cognitive processes such as memory Therefore we specifically invite contributions covering the auditory somatosensory olfactory and memory domain We ask all contributors to provide discussions on the relationship between attention and consciousness and focus on 1 the influence of attention on sensory processing 2 the formation of conscious perception 3 the evidence for unconscious processing and its modulation by attention 4 potential indications for dissociations between attention and consciousness e g does paying attention to a stimulus decrease performance on e g a discrimination task 5 neuroimaging and neurophysiology data pertaining to these questions Often one is caught in one s own research field and lacks the time or the knowledge to delve into another field This Research Topic should provide a great overview in great breadth of the current state of knowledge on the links between attention and consciousness and their interactions in several different sensory modalities

Cohen,2013-03-09 As you read this you are probably unaware of how your left foot feels in your shoe Although your brain was receiving sensory input from this foot you were not aware of your foot because you were reading and not attending to it However this discussion led you to move your attention to your left foot and to become aware of it When I was a medical student I saw a patient who was unaware of both the left side of his body and the left side of his environment Unlike people in normal health who when instructed can become aware of the left side of the body this patient could not be made aware of his left arm or the left side of his environment The patient s defect was so profound that despite being hungry he was unaware of food on the left side of his tray and did not recognize that his left arm belonged to him This left sided body and spatial unawareness could not be accounted for by a primary sensory defect Although I knew that this man suffered from a large right hemisphere stroke I did not know the brain mechanisms that accounted for this profound example of unawareness It was not until I had almost completed my neurology training in 1969 that I was able to return to this problem At that time most neuropsychological research was directed at understanding the language disorders associated with brain disease

Attention Equals Life Andrew Epstein,2016-06-10 Poetry has long been thought of as a genre devoted to grand subjects timeless themes and sublime beauty Why then have contemporary poets turned with such intensity to documenting and capturing the everyday and mundane Drawing on insights about the nature of everyday life from philosophy history and critical theory Andrew Epstein traces the modern history of this preoccupation and considers why it is so much with us today Attention Equals Life argues that a potent hunger for everyday life explodes in the post 1945 period as a reaction to the rapid

unsettling transformations of this epoch which have resulted in a culture of perilous distraction Epstein demonstrates that poetry is an important and perhaps unlikely cultural form that has mounted a response and even a mode of resistance to a culture suffering from an acute crisis of attention In this timely and engaging study Epstein examines why a compulsion to represent the everyday becomes predominant in the decades after modernism and why it has so often sparked genre bending formal experimentation With chapters devoted to illuminating readings of a diverse group of writers including poets associated with influential movements like the New York School language poetry and conceptual writing the book considers the variety of forms contemporary poetry of everyday life has taken and analyzes how gender race and political forces all profoundly inflect the experience and the representation of the quotidian By exploring the rise of experimental realism as a poetic mode and the turn to rule governed everyday life projects *Attention Equals Life* offers a new way of understanding a vital strain at the heart of twentieth and twenty first century literature It not only charts the evolution of a significant concept in cultural theory and poetry but also reminds readers that the quest to pay attention to the everyday within today's frenetic world of and social media is an urgent and unending task
