**Linguistic Instruments In Requirements Engineering:**

**Linguistic Instruments in Requirements Engineering** J. F. M. Burg,1997 **Formal Ontology in Information Systems** Nicola Guarino,1998 Research on ontology is becoming increasingly widespread in the computer science community While this term has been rather confined to the philosophical sphere in the past it is now gaining a specific role in areas such as Artificial Intelligence Computational Linguistics and Databases Its importance has been recognized in fields as diverse as knowledge engineering knowledge representation qualitative modeling language engineering database design information integration object oriented analysis information retrieval and extraction knowledge management and organization agent based systems design Current applications areas are disparate including enterprise integration natural language translation medicine mechanical engineering electronic commerce geographic information systems legal information systems and biological information systems Various workshops addressing the engineering aspects of ontology have been held in the recent years However ontology by its very nature ought to be a unifying discipline Insights in this field have potential impact on the whole area of information systems taking this term in its broadest sense as testified by the interest recently shown by international standards organizations In order to provide a solid general foundation for this work it is therefore important to focus on the common scientific principles and open problems arising from current tools methodologies and applications of ontology **Aspect-Oriented Requirements Engineering** Ana Moreira,Ruzanna Chitchyan,João Araújo,Awais Rashid,2013-11-19 Broadly scoped requirements such as security privacy and response time are a major source of complexity in modern software systems This is due to their tangled inter relationships with and effects on other requirements Aspect Oriented Requirements Engineering AORE aims to facilitate modularisation of such broadly scoped requirements so that software developers are able to reason about them in isolation one at a time AORE also captures these inter relationships and effects in well defined composition specifications and in so doing exposes the causes for potential conflicts trade offs and roots for the key early architectural decisions Over the last decade significant work has been carried out in the field of AORE With this book the editors aim to provide a consolidated overview of these efforts and results The individual contributions discuss how aspects can be identified represented composed and reasoned about as well as how they are used in specific domains and in industry Thus the book does not present one particular AORE approach but conveys a broad understanding of the aspect oriented perspective on requirements engineering The chapters are organized into five sections concern identification in requirements concern modelling and composition domain specific use of AORE aspect interactions and AORE in industry This book provides readers with the most comprehensive coverage of AORE and the capabilities it offers to those grappling with the complexity arising from broadly scoped requirements a phenomenon that is without doubt universal across software systems Software engineers and related professionals in industry as well as advanced undergraduate and post graduate students and researchers will benefit from these comprehensive descriptions and

Berry,Xavier Franch,2011-03-16 This book constitutes the refereed proceedings of the 17th International Working Conference on Requirements Engineering Foundation for Software Quality REFSQ 2011 held in Essen Germany in March 2011 The 10 revised full papers and the 9 short papers presented were carefully reviewed and selected from 59 submissions The papers are organized in seven topical sections on security and sustainability process improvement and requirements in context elicitation models services embedded and real time systems and prioritization and traceability **Natural Language Processing and Information Systems** Farid Meziane,Elizabeth Métais,2004-07-28 Welcome to NLDB04 the Ninth International Conference on the Application of Natural Language to Information Systems held at the University of Salford UK d ing June 23 25 2004 NLDB04 follows on the success of previous conferences held since 1995 Early conferences then known as Application of Natural Language to Databases hence the acronym NLDB were used as a forum to discuss and disse nate research on the integration of natural language and databases and were mainly concerned with natural language based queries database modelling and user int faces that facilitate access to information The conference has since moved to enc pass all aspects of Information Systems and Software Engineering Indeed the use of natural language in systems modelling has greatly improved the development process and benefited both

developers and users at all stages of the software development process The latest developments in the field of natural language and the emergence of new technologies has seen a shift towards storage of large semantic electronic dictionaries their exploitation and the advent of what is now known as the semantic web Inf mation extraction and retrieval document and content management ontology dev opment and management and natural language conversational systems are becoming regular tracks in the last NLDB conferences NLDB04 has seen a 50% increase in the number of submissions and has est lished itself as one of the leading conferences in the area of applying natural language to information systems in its broader sense Natural Language Processing and Information Systems Zoubida Kedad,Nadira Lammari,Elisabeth Métais,Farid Meziane,Yacine Rezgui,2007-08-15 This book constitutes the refereed proceedings of the 12th International Conference on Applications of Natural Language to Information Systems NLDB 2007 held in Paris France in June 2007 It covers natural language for database query processing email management semantic annotation text clustering ontology engineering natural language for information system design information retrieval systems and natural language processing techniques

**Seminal Contributions to Information Systems Engineering** Janis Bubenko,John Krogstie,Oscar Pastor,Barbara Pernici,Colette Rolland,Arne Sølvberg,2013-06-13 In 2013 the International Conference on Advance Information Systems Engineering CAiSE turns 25 Initially launched in 1989 for all these years the conference has provided a broad forum for researchers working in the area of Information Systems Engineering To reflect on the work done so far and to examine prospects for future work the CAiSE Steering Committee decided to present a selection of seminal papers published for the conference during these years and to ask their authors all prominent researchers in the field to comment on their work and how it has developed over the years The scope of the papers selected covers a broad range of topics related to modeling and designing information systems collecting and managing requirements and with special attention to how information systems are engineered towards their final development and deployment as software components With this approach the book provides not only a historical analysis on how information systems engineering evolved over the years but also a fascinating social network analysis of the research community Additionally many inspiring ideas for future research and new perspectives in this area are sparked by the intriguing comments of the renowned authors **Engineering and Managing Software Requirements** Aybüke Aurum,Claes Wohlin,2006-04-07 Requirements engineering is the process by which the requirements for software systems are gathered analyzed documented and managed throughout their complete lifecycle Traditionally it has been concerned with technical goals for functions of and constraints on software systems Aurum and Wohlin however argue that it is no longer appropriate for software systems professionals to focus only on functional and non functional aspects of the intended system and to somehow assume that organizational context and needs are outside their remit Instead they call for a broader perspective in order to gain a better understanding of the interdependencies between enterprise stakeholders processes and software systems which would in turn give rise to more appropriate techniques and

higher quality systems Following an introductory chapter that provides an exploration of key issues in requirements engineering the book is organized in three parts Part 1 presents surveys of state of the art requirements engineering process research along with critical assessments of existing models frameworks and techniques Part 2 addresses key areas in requirements engineering such as market driven requirements engineering goal modeling requirements ambiguity and others Part 3 concludes the book with articles that present empirical evidence and experiences from practices in industrial projects Its broader perspective gives this book its distinct appeal and makes it of interest to both researchers and practitioners not only in software engineering but also in other disciplines such as business process engineering and management science Computer Engineering: Concepts, Methodologies, Tools and Applications Management Association, Information Resources,2011-12-31 This reference is a broad multi volume collection of the best recent works published under the umbrella of computer engineering including perspectives on the fundamental aspects tools and technologies methods and design applications managerial impact social behavioral perspectives critical issues and emerging trends in the field Provided by publisher **New Trends in Software Methodologies, Tools and Techniques** Hamido Fujita,Mohamed Mejri,2005 Presents trends and theories in the direction in which we believe software science and engineering may develop to transform the role of software and science in information society This series contributes to elaborate on such trends and related academic research studies and development **Requirements Engineering: Foundation for Software Quality** Martin Glinz,Patrick Heymans,2009-06-06 This book constitutes the refereed proceedings of the 15th International Working Conference on Requirements Engineering Foundation for Software Quality REFSQ 2009 held in Amsterdam The Netherlands in June 2009 The 14 revised full papers were carefully reviewed and selected from 49 submissions The papers are organized in thematic sections on value and risk change and evolution interactions and inconsistencies organization and structuring experience elicitation research methods behavior modeling empirical studies and open source RE Transactions on Aspect-Oriented Software Development III Awais Rashid,Mehmet Aksit,2007-11-26 This journal is devoted to all facets of aspect oriented software development AOSD techniques in the context of all phases of the software life cycle from requirements and design to implementation maintenance and evolution The focus is on approaches for systematic identification modularization representation and composition of crosscutting concerns i e the aspects and evaluation of such approaches and their impact on improving quality attributes of software systems **Knowledge-based Software Engineering** Enn Tõugu,Ėnn Kharal′dovich Tyugu,Takahira Yamaguchi,2006 This publication addresses the research in theoretical foundations practical techniques software tools applications and or practical experiences in knowledge based software engineering The book also includes a new field research in web services and semantic web This is a rapidly developing research area promising to give excellent practical outcome and interesting for theoretically minded as well as for practically minded people The largest part of the papers belongs to a traditional area of applications of artificial intelligence
