Beyond Right and Wrong Randall Kiser, 2010-01-07 Let us endeavor to see things as they are and then enquire whether we ought to complain Whether to see life as it is will give us much consolation I know not but the consolation which is drawn from truth if any there be is solid and durable that which may be derived from error must be like its original fallacious and fugitive Samuel Johnson Letter to Bennet Langton 1758 Attorneys and clients make hundreds of decisions in every litigation case From initially deciding which attorney to retain to deciding which witnesses to call at trial from deciding whether to file a complaint to deciding whether to appeal a verdict attorneys and clients make multiple critical decisions about strategies costs arguments valuations evidence and negotiations Once made these decisions are scrutinized by an opponent intent on exploiting the consequences of any mistake In this intense and adversarial arena decision making errors often are transparent irreversible and dispositive wielding the power to bankrupt clients and dissolve law firms Although attorneys and clients may regard sound decision making as incidental to effective lawyering sound decision making actually is the essence of effective lawyering An attorney's knowledge intelligence and experience are inert resources until the attorney decides how to deploy those skills to serve the client's interests Those decisions in turn largely determine a case's course and outcome

Neuroeconomic and

Behavioral Aspects of Decision Making Kesra Nermend, Małgorzata Łatuszyńska, 2017-10-06 This proceedings volume presents the latest scientific research and trends in experimental economics with particular focus on neuroeconomics. Derived from the 2016 Computational Methods in Experimental Economics CMEE conference held in Szczecin Poland this book features research and analysis of novel computational methods in neuroeconomics. Neuroeconomics is an interdisciplinary field that combines neuroscience psychology and economics to build a comprehensive theory of decision making. At its core neuroeconomics analyzes the decision making process not only in terms of external conditions or psychological aspects but also from the neuronal point of view by examining the cerebral conditions of decision making. The application of IT enhances the possibilities of conducting such analyses. Such studies are now performed by software that provides interaction among all the participants and possibilities to register their reactions more accurately. This book examines some of these applications and methods. Featuring contributions on both theory and application this book is of interest to researchers students academics and professionals interested in experimental economics neuroeconomics and behavioral economics.

Behavioral Law and Economics Eyal Zamir, Doron Teichman, 2018-06-05 In the past few decades economic analysis of law has been challenged by a growing body of experimental and empirical studies that attest to prevalent and systematic deviations from the assumptions of economic rationality. While the findings on bounded rationality and heuristics and biases were initially perceived as antithetical to standard economic and legal economic analysis over time they have been largely integrated into mainstream economic analysis including economic analysis of law. Moreover the impact of behavioral insights has long since transcended purely economic analysis of law. In recent years the behavioral movement has become one of the most influential developments in legal scholarship in general. Behavioral Law and Economics offers a state of the art overview of the field. Eyal Zamir and Doron Teichman survey the entire body of psychological research that lies at the basis of behavioral analysis of law and critically evaluate the core methodological questions of this area of research. Following this the book discusses the fundamental normative questions stemming from the psychological findings on bounded rationality and explores their implications for setting the law's goals and designing the means to attain them. The book then provides a systematic and critical examination of the contributions of behavioral studies to all major fields of law including property contracts consumer protection torts corporate securities regulation antitrust administrative constitutional international criminal and evidence law as well as to the behavior of key players in the legal arena litigants and judicial decision makers.

Straight Choices Ben R. Newell, David A. Lagnado, David R. Shanks, 2007-08-07 We all face a perplexing array of decisions every day Straight Choices provides an integrative account of the psychology of decision making in which clear connections are made between empirical results and how these results can help us to understand our uncertain world Throughout the text there is an emphasis on the relationship between learning and decision making The authors argue that the best way to understand how and why decisions are made is in the context of the learning and knowledge acquisition that precedes them and the feedback that follows them The mechanisms of learning and the structure of environments in which decisions are made are carefully examined to explore the ways in which they act on our choices From this the authors go on to consider whether we are all constrained to fall prey to biases or whether with sufficient exposure can we find optimal decision strategies and improve our decision making This novel approach integrates findings from the decision and learning literatures to provide a unique perspective on the psychology of decision making It will be of interest to researchers and students in cognitive psychology as well as researchers in economics and philosophy interested in the nature of decision making

The Role of Fear for Entrepreneurial Venture Creation Philipp K. Berger, 2015-03-10 Based on theory and an empirical survey Philipp K. Berger measures the amount of fear for different groups of entrepreneurs He draws parallels to Prospect Theory revealing the components of fear and shows that entrepreneurial fear is a rather rational subconscious evaluation of the situation Furthermore he identifies the root causes of this fear the fear of failure and the underlying reasons why potential entrepreneurs think they might fail A comparison to actual company failure shows that potential entrepreneurs both over

rate certain potential pitfalls and under estimate other blind spots The attributes of the individuals also have an influence on their fear clustering them into rather fearful and rather fearless entrepreneurs Based on the generated insights the book concludes with concrete recommendations to improve the entrepreneurial activity in a country **Handbook of Applied Cognition** Francis T.
