for municipal legislators and industry practitioners      *Life Cycle Engineering of Plastics* L. Lundquist,Y. Leterrier,P. Sunderland,J.A.E. Manson,2001-01-23 This book adds much to the already evolving field of Design for Environment but it goes far beyond most works on this subject by surrounding the central notions of life cycle assessment with a scientific body of knowledge and with a more practical slant reflecting the reality of the organizations in which product development occurs Through a focus on plastic products the authors show the importance of making ties between basic technical knowledge and the process of life cycle engineering Their approach offers a practical deliberate way to make ecologically and economically sensible decisions about product reuse and recycling and other critical dimensions of product life behavior They demonstrate a positive approach to designing products that fits into a sustainable economy through down to earth cases While the book focuses on the life cycle engineering of plastics it is only a short step to other materials and products Beyond contributing to the technology of life cycle engineering this text adds to the growing body of knowledge that argues for an fundamentally new way of thinking about economic and social activity a new paradigm for sustainable social and industrial problem solving Industrial ecology is such a new system for thinking about and implementing sustainability that draws its core set of ideas from the ecological world Industrial ecology brings to the surface the idea of interdependence among members of a community natural or economic and notes the material cycles that are central to a stable ecosystem The life cycle engineering framework coupled with sound scientific knowledge of materials behavior as articulated in this book makes a giant step towards bringing the model of industrial ecology into everyday practice From the Preface by John R Ehrenfeld Director MIT Technology Business and Environment Program Center for Technology Policy and Industrial Development

Karger-Kocsis, 2012-12-06 My heart sank when I was approached by Dr Hastings and by Professor Briggs Senior Editor of Materials Science and Technology and Series Editor of Polymer Science and Technology Series at Chapman Hall respectively to edit a book with the provisional title Handbook of Polypropylene My reluctance was due to the fact that my former book 1 along with that of Moore 2 issued in the meantime seemed to cover the information demand on polypropylene and related systems Encouraged however by some colleagues the new generation of scientists and engineers needs a good reference book with easy information retrieval and the development with metallocene catalysts deserves a new update I started on this venture Having some experience with polypropylene systems and being aware of the current literature it was easy to settle the titles for the book chapters and also to select and approach the most suitable potential contributors Fortunately many of my first choice authors accepted the invitation to contribute Like all editors of multi author volumes I recognize that obtaining contributors follows an S type curve of asymptotic saturation when the number of willing contributors is plotted as a function of time The saturation point is however never reached and as a consequence Dear Reader you will also find some topics of some relevance which are not explicitly treated in this book but believe me I have considered them
