Family Psychology Science Based Interventions:

Family Psychology Howard A. Liddle, 2002-01 Family Psychology Science Based Interventions presents innovative perspectives on the science of family intervention. The editors provide a thorough and concise historical overview of this emerging field which is considered the applied branch of family psychology. Leading experts in the field present therapy techniques, procedures, and research strategies that are empirically based. Contributors stress the need to link research and practice so that the questions targeted by researchers are those confronted by clinicians and the results can directly influence the practice of family therapy. Also emphasized is the need to identify specific patient characteristics that set these patients apart from the rest of the population and if addressed in a more focused manner would enhance the effectiveness of the intervention. Chapters offer strong empirical evidence and the most current developments for the treatment of a wide variety of marriage and family problems. Advances in couples and marital research include conceptual frameworks and treatments aimed at preventing marital distress and divorce and promoting marital adjustment. Chapters on family research discuss promising areas and challenges in moving prevention science into broader community settings, the specific value of prevention efforts, and the role of the family in these efforts. Of particular interest are chapters focusing on contextual considerations which highlight the many ways in which gender and cultural factors can influence core constructs and processes. This book will be a valuable resource for advanced graduate students, family therapists, and family researchers committed to conducting clinically meaningful and scientifically sound intervention research.

contexts work in both clinical and real world settings

It describes cutting edge research across developmental clinical counseling and school psychology, social work, neuroscience, and psychopharmacology. The Handbook emphasizes the development of individual differences in resilience and mental health concerns, including social, environmental, and epigenetic influences across the lifespan, particularly during childhood. Authors offer detailed discussions that expand on areas of research and practice that already have a substantive research base, such as self-regulation, resilience, defining evidence-based treatment, and describing client-related variables that influence treatment processes. Chapters in newer areas of research are also included, e.g., neuroimaging, medications as adjuncts to psychological treatment, and the placebo effect. Additionally, authors address treatment outcomes, such as evaluating therapist effectiveness, assessing outcomes from different perspectives, and determining the length of treatment necessary to attain clinical improvement. The Handbook provides an entrée to the research, as well as hands-on guidance and suggestions for practice and oversight, making it a valuable resource for graduate students, practitioners, researchers, and agencies alike.

Drug Use Trajectories Among Minority Youth Yonette F. Thomas, LeShawndra N. Price, 2016-09-01 This volume examines trajectories of drug use among ethnic minority youth in the United States, with a focus on African Americans and Hispanics. It also highlights what research designs have been employed to address these differences, as well as suggests strategies for moving this discourse forward by identifying potential targets for prevention and intervention with minority youth. This book features essays by leading experts in the field who have grappled with this issue for decades. Inside, readers will find an insightful dialogue that addresses such questions as: Why are African American and Hispanic youth more likely than their White peers to abstain from drug use during adolescence but are more likely to become problem users later in life? What impact does the stress caused by discrimination have on potential drug use? To what extent does religiosity protect minority youth from drug use, as past research suggests that it protects White youth? What is the influence of neighborhood context on exposure to and use of substances among urban African American children? Taken together, the essays in this book identify underexplored risk and protective factors and gaps in the current state of knowledge that can be used to develop effective, culturally specific drug abuse prevention strategies. This book is for anyone with an interest in the initiation and escalation of drug use among African Americans and Hispanics, Latinos, and factors that influence these patterns over the life course. It will also be an ideal resource for those interested in better understanding the mechanisms by which risk and protective factors are related to the development of drug use and

addiction particularly the ways in which such factors contribute to health differences and have disproportionately more negative consequences for ethnic minorities *Substance Abuse and Dependence in Adolescence* Cecilia A.
