Committee for Physics of the prize to A H Compton in 1927 Some translated autobiographic texts have also been included to acquaint the reader with Klein s interest in cosmology and his attempts to find the driving force behind the expanding system of galaxies what Klein termed the Meta galaxy **In the Beginning** John R. Gribbin,1993 Analyzes the consequences of the most recent discoveries in the field of astronomy discussing the findings of the COBE satellite which prove the Big Bang theory but pose other important questions about the origin of life 30 000 first printing 30 000 ad promo **Oskar Klein Memorial Lectures, The: 1988-1999** Gosta Ekspong,2014-03-21 The Oskar Klein Memorial Lecture series has become a very successful tradition in Swedish physics since it started in 1988 Theoretical high energy physics dominates the subjects of the lectures mirroring one of Klein s own main interests This single volume is a compilation of the unique lectures previously produced in three separate volumes The lectures are by world renowned experts in physics who have all contributed to the excitement of the field over the years They continue to be of value to students and teachers alike

Reading Popular Physics Elizabeth Leane, 2017-03-02 Reading Popular Physics is a valuable contribution to our understanding of the nature and implications of physics popularizations A literary critic trained in science Elizabeth Leane treats popular science writing as a distinct and significant genre focusing particularly on five bestselling books Stephen Hawking's *A Brief History of Time* Steven Weinberg's *The First Three Minutes* James Gleick's *Chaos* M Mitchell Waldrop's *Complexity* and Gary Zukav's *The Dancing Wu Li Masters* Leane situates her examination of the texts within the heated interdisciplinary exchanges known as the Science Wars focusing specifically on the disputed issue of the role of language in science Her use of literary analysis reveals how popular science books function as sites for disciplinary skirmishes as she uncovers the ways in which popularizers of science influence the public In addition to their explicit discussion of scientific concepts Leane argues these authors employ subtle textual strategies that encode claims about the nature and status of scientific knowledge claims that are all the more powerful because they are unacknowledged Her book

will change the way these texts are read offering readers a fresh perspective on this highly visible and influential genre A

Search for Significance Vern Westfall, 2017-03-27 Humanity's search for significance has been ongoing since the earliest humans asked the first questions. Answers have come from the arrangements of stars from nature and from many gods. The changing perspectives created by myth, religion, and science have molded our social and spiritual relationships and our perceived place in the natural world. The process forms our core beliefs, gives us direction, outlines our history, and determines our future. Understanding how our differing perspectives both join and separate us is essential if we are to survive our current dominance over natural processes.

The Deep Ecology Movement Alan Drengson, Yuichi Inoue, 1995-02-02 Deep ecology, a term coined by noted Norwegian philosopher Arne Naess, is a worldwide grassroots environmental movement that seeks to redress the shallow and piecemeal approach of technology-based ecology. Its followers share a profound respect for the earth's interrelated natural systems and a sense of urgency about the need to make profound cultural and social changes in order to respond and sustain the long-term health of the planet. This comprehensive introduction to the Deep Ecology movement brings together Naess' groundbreaking work with essays by environmental thinkers and activists responding to and expanding on its philosophical and practical aspects. Contributors include George Sessions, Gary Snyder, Alan Drengson, Dill Devall, Freya Matthews, Warwick Fox, David Rothenberg, Michael E. Zimmerman, Patsy Hallen, Dolores LaChapelle, Pat Fleming, Joanna Macy, John Rodman, and Andrew McLaughlin. The authors offer diverse viewpoints from ecofeminist, scientific, and purely philosophical approaches to Christian, Buddhist, and Gandhian-based principles. Their essays show how social, technological, psychological, philosophical, and institutional issues are all fundamentally related to our attitudes and values toward the natural world.

In Search of the Multiverse John Gribbin, 2010-08-13 Critical acclaim for John Gribbin, the master of popular science. Sunday Times London: Gribbin explains things very well indeed and there's not an equation in sight. David Goodstein, The New York Times Book Review on *Almost Everyone's Guide to Science*: Gribbin breathes life into the core ideas of complexity science and argues convincingly that the basic laws, even in biology, will ultimately turn out to be simple. Nature magazine on *Deep Simplicity*: Gribbin takes us through the basics of chaos theory with his customary talent for accessibility and clarity. His arguments are driven not by impersonal equations but by a sense of wonder at the presence in the universe and in nature of simple self-organizing harmonies underpinning all structures, whether they are stars or flowers. Sunday Times London on *Deep Simplicity*: In the true quantum realm, Gribbin remains the premier expositor of the latest developments. Booklist on Schrödinger's Kittens and the Search for Reality.

Out of Weakness Andrew Schmookler, 2011-02-23 A wide-ranging and deeply thoughtful meditation on the psychological sources of the danger to humanity created by the advent of weapons of mass destruction.
