**Individual Differences in Movement** D.B. Kirkcaldy, 2012-12-06 This book is an attempt to bridge the gap between differential psychology and human movement. It is curious that each discipline has received considerable attention in its own right but little effort has been made to cross fertilize them. Some experimentalists view this union as the equivalent of committing academic adultery; they have tended to concentrate on general theories and models of motor control and movement, viewing individual differences as awkward and best assigned to the error variance component of an analysis. By neglecting person variables, valuable information is discarded; people do differ in terms of ability, attitude, motivation, and temperament, and it is hardly surprising that such differences interact with a variety of experimental and situational paradigms. The causes and determinants of individual differences must be examined at an interdisciplinary level, incorporating studies from experimental, physiological, clinical, and educational psychology. This synthesis could not have been actualized by any single contributor. For this reason, a multi-authored approach has been adopted in which 17 specialists have been assembled to present the current position of individual difference research in their respective disciplines. The authors were granted maximum freedom in their selection and presentation of material. What emerges is hopefully a novel and informative collection of articles addressed to a wide audience and providing an impulse for further research. **Individual**

**Heritage Languages at the Crossroads: Cultural Contexts, Individual Differences, and Methodologies** Brechje Antonet Van Osch,Alicia Luque,Jason Rothman,Selim Tiryakiol,Nadine Kolb,2025-02-10 This Research Topic focuses on heritage languages at the crossroads by approaching heritage language bilingualism in an interdisciplinary way A language qualifies as a heritage language if it is a minority language spoken at home in a majority language context Any language can be the societal majority language in one context and the heritage language in another While the number of empirical studies on language acquisition and processing in heritage language bilingualism has increased in recent years heritage language bilinguals are an understudied subgroup of bilinguals When examined as adults heritage speaker bilinguals tend to show significant differences in their heritage language performance use and competence grammatical knowledge from one another This variation is particularly unusual because heritage speakers like monolinguals are native speakers of the heritage language

The Role of Eye Movements in Perceptual Processes E. Chekaluk,K.R. Llewellyn,1992-07-06 It has become a truism that the frozen optical diagram representation of vision is the worst possible picture of the way in which we visually interact with the environment Even apart from our reaction to moving targets by pursuit movements our visual behaviour can be said to be characterised by eye movements We sample from our environment in a series of relatively brief fixations which move from one point to another in a series of extremely rapid jerks known as saccades Many questions arising from this characteristic of vision are explored within this volume including the question of how our visual world maintains its perceptual stability despite the drastic changes in input associated with these eye movements

Genetic diversity and human behavior James Norman Spuhler, Genetic differences in humans like those between individuals of any animal or plant species and those between species are all products of the evolutionary development of the living world These differences with their behavioral consequences can only be understood in the light of evolution Our understanding of evolution however has itself evolved The Darwin Wallace theory of evolution appeared in the nineteenth century Since then development of evolutionary thought has gone through several stages The contributions in this volume describe those stages The first four decades after Darwin were dominated by studies in comparative anatomy embryology systematics zoogeography phytogeography and paleontology all intended to discover and

examine the evidences of evolution But the phylogenies of the animal and plant kingdoms that is the history of the linkages of animal and plant organisms as they change through time were less well documented In particular the phylogeny of humans is still not completely known The period following World War Two saw acceleration of activity in fields in and bordering on behavioral genetics Research in neuroendocrinology showed that higher cortical centers could influence and be influenced by the hypothalamus pituitary thyroid adrenals and gonads Genetic diversity in the function of these organs had obvious consequences for social and cultural behavior The failure of some early and long reinforced attempts at conditioning by students of comparative animal behavior showed species specific innate behavior could not be ignored in any theory that attempts to combine psychology and anthropology This classic volume summarizes the development of evolutionary thinking and describes how what we know about genetic diversity links up with research on human behavior J N Spuhler was known for his pioneering work in the department of anthropological genetics He taught in many universities including Ohio State University the University of Michigan and the University of Mexico He received the National Academy of Science award for scientific reviewing and his work has appeared in scholarly journals including Journal of Anthropological Research Annual Review of Anthropology and American Journal of Physical Anthropology *Handbook of Reading Research, Volume II* Rebecca Barr, Michael L. Kamil, Peter B. Mosenthal, P David Pearson, 2016-11-18 A comprehensive overview of important contemporary issues in the field of reading research from the mid 1980s to mid 1990s this well received volume offers readers an examination of literacy through a variety of lenses some permitting microscopic views and others panoramic views A veritable who's who of specialists in the field chapter authors cover current methodology as well as cumulative research based knowledge Because it deals with society and literacy the first section provides the broadest possible view of literacy The second section defines the range of activities culturally determined to be a part of the enterprise known as literacy The third focuses on the processes that individuals engage in when they perform the act of reading The fourth section visits the environment in which the knowledge that comprises literacy is passed on from one generation to the next The last section an epilogue to the whole enterprise of reading research provides apt philosophical reflection **Dispersal Ecology and Evolution** Jean Clobert, 2012-09-27 Provides an overview of the fast expanding field of dispersal ecology The causes mechanisms and consequences of dispersal at the individual population species and community levels are all considered **Art, Aesthetics, and the Brain** Joseph P. Huston, Marcos Nadal, Francisco Mora, Luigi F. Agnati, Camilo José Cela Conde, 2015-06-25 Humans have engaged in artistic and aesthetic activities since the appearance of our species Our ancestors have decorated their bodies tools and utensils for over 100 000 years The expression of meaning using color line sound rhythm or movement among other means constitutes a fundamental aspect of our species biological and cultural heritage Art and aesthetics therefore contribute to our species identity and distinguish it from its living and extinct relatives Science is faced with the challenge of explaining the natural foundations of such a unique trait and the way cultural

processes nurture it into magnificent expressions historically and ethnically unique How does the human brain bring about these sorts of behaviors What neural processes underlie the appreciation of painting music and dance How does training modulate these processes How are they impaired by brain lesions and neurodegenerative diseases How did such neural underpinnings evolve Are humans the only species capable of aesthetic appreciation or are other species endowed with the rudiments of this capacity This volume brings together the work on such questions by leading experts in genetics psychology neuroimaging neuropsychology art history and philosophy It sets the stage for a cognitive neuroscience of art and aesthetics understood in the broadest possible terms With sections on visual art dance music neuropsychology and evolution the breadth of this volume's scope reflects the richness and variety of topics and methods currently used today by scientists to understand the way our brain endows us with the faculty to produce and appreciate art and aesthetics
