**Evidence and Evolution** Elliott Sober, 2008-03-27 How should the concept of evidence be understood And how does the concept of evidence apply to the controversy about creationism as well as to work in evolutionary biology about natural selection and common ancestry In this rich and wide-ranging book Elliott Sober investigates general questions about probability and evidence and shows how the answers he develops to those questions apply to the specifics of evolutionary biology Drawing on a set of fascinating examples he analyzes whether claims about intelligent design are untestable whether they are discredited by the fact that many adaptations are imperfect how evidence bears on whether present species trace back to common ancestors how hypotheses about natural selection can be tested and many other issues His book will interest all readers who want to understand philosophical questions about evidence and evolution as they arise both in Darwin's work and in contemporary biological research  
**Knowledge As Design** David N. Perkins, 2013-11-26 First published in 1986 We all play the roles of teacher or learner many times in life in school and home on the job and even at play How can we

strengthen those roles striving for deep understanding and sound thinking Knowledge As Design demonstrates the strong but neglected unity between learning and critical and creative thinking Author David Perkins discloses how the concept of design opens a doorway into a deeper exploration of any topic academic or every day Knowledge As Design challenges the concept of knowledge as information Drawing from current philosophy and cognitive science the book shows how learners can attain a new level of insight when learning highlights the constructed and constructive character of knowledge Any individual involved in formal or informal learning or teaching can benefit from the general outlook and specific principles laid out in this book It offers a uniquely intelligent philosophy and psychology of understanding and critical and creative thinking

Bera, Samrat Paul, 2017-12-11 This book comprises the select proceedings of the ETAEERE 2016 conference. The book aims to shed light on different systems or machines along with their complex operation behaviors and linear nonlinear relationship in different environments. It covers problems of multivariable control systems and provides the necessary background for performing research in the field of control and automation. Aimed at helping readers understand the classical and modern design of different intelligent automated systems, the book presents coverage on the control of linear and nonlinear systems, intelligent systems, stochastic control, knowledge-based systems, applications, fault diagnosis, and tolerant control, real-time control applications, etc. The contents of this volume will prove useful to researchers and professionals alike. **Handbook**

**of Wind Energy Aerodynamics** Bernhard Stoevesandt, Gerard Schepers, Peter Fuglsang, Yuping Sun, 2022-08-04 This handbook provides both a comprehensive overview and deep insights on the state-of-the-art methods used in wind turbine aerodynamics, as well as their advantages and limits. The focus of this work is specifically on wind turbines where the aerodynamics are different from that of other fields due to the turbulent wind fields they face and the resultant differences in structural requirements. It gives a complete picture of research in the field, taking into account the different approaches which are applied. This book would be useful to professionals, academics, researchers, and students working in the field.

**Handbook of Affective Sciences** Richard J. Davidson, Klaus R. Sherer, H. Hill Goldsmith, 2009-05-21 One hundred stereotype maps glazed with the most exquisite human prejudice especially collected for you by Yanko Tsvetkov, author of the viral Mapping Stereotypes project. Satire and cartography rarely come in a single package, but in the Atlas of Prejudice they successfully blend in a work of art that is both funny and thought-provoking. The book is based on Mapping Stereotypes, Yanko Tsvetkov's critically acclaimed project that became a viral Internet sensation in 2009. A reliable weapon against bigots of all kinds, it serves as an inexhaustible source of much-needed argumentation and occasionally as a nice slab of paper that can be used to smack them across the face whenever reasoning becomes utterly impossible. The Complete Collection version of the Atlas contains all maps from the previously published two volumes and adds twenty-five new ones, wrapping the best-selling series in a single extended edition. *Principles Underlying the Design of Electrical Machinery* Walter Irvine
