International Biographical Dictionary of Computer Pioneers John A. N. Lee, J. A. N. Lee, 1995 First Published in 1996 Routledge is an imprint of Taylor Francis an informa company *Edmund Berkeley and the Social Responsibility of Computer Professionals* Bernadette Longo, 2015-09-01 Edmund C Berkeley 1909 1988 was a mathematician insurance actuary inventor publisher and a founder of the Association for Computing Machinery ACM His book *Giant Brains or Machines That Think* 1949 was the first explanation of computers for a general readership His journal *Computers and Automation* 1951 1973 was the first journal for computer professionals In the 1950s Berkeley developed mail order kits for small personal computers such as Simple Simon and the Braniac In an era when computer development was on a scale barely affordable by universities or government agencies Berkeley took a different approach and sold simple computer kits to average Americans He believed that digital computers using mechanized reasoning based on symbolic logic could help people make more rational decisions The result of this improved reasoning would be better social conditions and fewer large scale wars Although Berkeley's populist notions of computer development in the public interest did not prevail the events of his life exemplify the human side of ongoing debates concerning the social responsibility of computer professionals This biography of Edmund Berkeley based on primary sources gathered over 15 years of archival research provides a lens to understand social and political decisions surrounding early computer development and the consequences of these decisions in our 21st century lives

**Fundamentals of Multicomponent High-Entropy Materials** Brian Cantor, 2024-11-13 Human development has been a continuing attempt to use new materials in ever more sophisticated ways to enhance the quality of human life Throughout history we have made materials with a main component based on the principal property required with small alloying additions to provide secondary properties But recently there has been a revolution as we have discovered how to make much more complex mixtures providing completely new materials requiring entirely new scientific theories and massively extending our ability to make useful products These new materials are called multicomponent or high entropy materials This is the first textbook on the fundamentals of these new multicomponent high entropy materials It includes contextual chapters on the history and future potential for developing humankind as driven by the discovery of new materials and core chapters on methods for discovering and manufacturing multicomponent high entropy materials their underlying thermodynamic and atomic and electronic structures their physical mechanical and chemical properties and their potential applications This book concentrates on the main new concepts and theories that have been developed It is written by the scientist who first discovered multicomponent high entropy materials and covers how to make them as well as their structures properties and potential applications providing an overview and a summary of the state of play for researchers as well as for students and newcomers entering the field

this term suggests the Encyclopedia explores not only autobiography and biography proper but also letters diaries memoirs family histories case histories and other ways in which individual lives have been recorded and structured It includes entries on genres and subgenres national and regional traditions from around the world and important auto biographical writers as well as articles on related areas such as oral history anthropology testimonies and the representation of life stories in non verbal art forms

**Building Blocks of Society** James W. Cortada, 2020-11-25 The history of information is a rapidly emerging new subfield of history Historians are identifying the issues they need to examine crafting novel research agendas and locating research materials relevant to their work Like the larger world around them historians are discovering what it means to live and work in a world that increasingly sees itself as an information society Long a discussion point among sociologists economists political leaders and media experts historians are integrating their methods and research into the larger conversation This book proposes a way to look at the history of information and to history as a whole that is simultaneously relevant to observers in other disciplines and familiar to historians of business economics sociology and technology The author presents that advocacy in two ways with theoretical and historiographical discussions of what information ecosystems and infrastructures are and their value for this kind of research second through a range of case studies applying those concepts The wide range of case studies is purposeful in demonstrating the applicability of the ideas presented in the early methodological chapters Themes mentioned in each of the early chapters are consistently applied in all subsequent chapters This book breaks from the more traditional historiography of book history sociological and philosophical discussions about knowledge and society The first two chapters focus on the craft of the historian in this new field better known as historiography and methods Subsequent chapters are case studies showing what results when a historian writes about ecosystems and infrastructures moving our discussion from theory to practice The book is an important and substantive contribution to this new subfield an essential primer as well as a major statement for all historians on how next to evolve their craft

**Formulations** Andrew Witt, 2022-01-11 An investigation of mathematics as it was drawn encoded imagined and interpreted by architects on the eve of digitization in the mid twentieth century In Formulations Andrew Witt examines the visual methodological and cultural intersections between architecture and mathematics The linkages Witt explores involve not the mystic transcendence of numbers invoked throughout architectural history but rather architecture s encounters with a range of calculational systems techniques that architects inventively retooled for design Witt offers a catalog of mid twentieth century practices of mathematical drawing and calculation in design that preceded and anticipated digitization as well as an account of the formal compendia that became a cultural currency shared between modern mathematicians and modern architects Witt presents a series of extensively illustrated biographies of method episodes that chart the myriad ways in which mathematics particularly the mathematical notion of modeling and drawing was spliced into the creative practice of design These include early drawing machines that mechanized curvature the incorporation of

geometric maquettes theorems made flesh into the toolbox of design the virtualization of buildings and landscapes through surveyed triangulation and photogrammetry formal and functional topology stereoscopic drawing the economic implications of cubic matrices and a strange synthesis of the technological mineral and biological crystallographic design Trained in both architecture and mathematics Witt uses mathematics as a lens through which to understand the relationship between architecture and a much broader set of sciences and visual techniques Through an intercultural exchange with other disciplines he argues architecture adapted not only the shapes and surfaces of mathematics but also its values and epistemic ideals *The Oxford Companion to the History of Modern Science* John L. Heilbron, 2003-02-14 Containing 609 encyclopedic articles written by more than 200 prominent scholars The Oxford Companion to the History of Modern Science presents an unparalleled history of the field invaluable to anyone with an interest in the technology ideas discoveries and learned institutions that have shaped our world over the past five centuries Focusing on the period from the Renaissance to the early twenty first century the articles cover all disciplines Biology Alchemy Behaviorism historical periods the Scientific Revolution World War II the Cold War concepts Hypothesis Space and Time Ether and methodologies and philosophies Observation and Experiment Darwinism Coverage is international tracing the spread of science from its traditional centers and explaining how the prevailing knowledge of non Western societies has modified or contributed to the dominant global science as it is currently understood Revealing the interplay between science and the wider culture the Companion includes entries on topics such as minority groups art religion and science s practical applications One hundred biographies of the most iconic historic figures chosen for their contributions to science and the interest of their lives are also included Above all The Oxford Companion to the History of Modern Science is a companion to world history modern in coverage generous in breadth and cosmopolitan in scope The volume s utility is enhanced by a thematic outline of the entire contents a thorough system of cross referencing and a detailed index that enables the reader to follow a specific line of inquiry along various threads from multiple starting points Each essay has numerous suggestions for further reading all of which favor literature that is accessible to the general reader and a bibliographical essay provides a general overview of the scholarship in the field Lastly as a contribution to the visual appeal of the Companion over 100 black and white illustrations and an eight page color section capture the eye and spark the imagination
