International Law And Sustainable Development:

The Evolution of Sustainable Development in International Law: Inception, Meaning and Status Nico J.

Schrijver, 2009-02-28 In a relatively short time the concept of sustainable development has become firmly established in the field of international law The World Commission on Environment and Development concisely defined sustainable development as follows development that meets the needs of the present generation without compromising the ability of future generations to meet their own needs This definition takes into account the needs of both the present and future generations as well as the capacity of the earth and its natural resources which by clear implication should not be depleted by a small group of people in industrialized countries The aim of this book is threefold to review the genesis and to clarify the meaning of the concept of sustainable development as well as to assess its status within public international law Furthermore it examines the legal principles that have emerged in the pursuit of sustainable development Lastly it assesses to what extent the actual evolution of law demonstrates the balance and integration with all pertinent fields of international law as urged by the Rio Johannesburg and World Summit documents This is the second volume in the Hague Academy of International Law Pocket Book series it contains the text of the course given at the Hague Academy by Professor Schrijver Cet ouvrage r pond trois objectifs examiner la naissance du concept de d veloppement durable clarifier sa signification et valuer son statut dans le droit international public Il examine galement les principes juridiques n s de la poursuite du d veloppement durable Enfin il examine l volution actuelle du droit par rapport aux exigences nonc es Rio Johannesburg et au cours du dernier sommet mondial en ce qui concerne l int gration du concept de d veloppement durable dans tous les domaines pertinents du droit international

Boyle, David Freestone, 1999 Written by leading experts in International Law this collection of essays deals with the most recent developments in international environmental law since the UN Rio Conference on Environment and Development in 1992 It focuses on sustainable development natural resources Antarctica the protection of marine environment and the revolution in international fisheries law

International Law and Sustainable Development Alistair Rieu-Clarke, 2005-11-01 Implementing the goal of sustainable development has long been heralded as the means by which the needs of both present and future generations can be met However finding a long term balance between economic social and environmental interests the basic tenet of sustainable development has proved largely illusive in practice This book shows that while a number of legal frameworks to help promote the goal of sustainable development have been proposed at the international level they fail to fully capture the essence of sustainable development and international law s capacity to support its implementation The book offers a critical analysis of past attempts to develop legal frameworks for promoting sustainable development at the international level and advocates for a fresh approach based on lessons learnt from the law of international watercourses The book is divided into four sections The first section includes an overview of the topic area and an understanding of international law In section two

the book explores the meaning of sustainable development and considers the term's relationship with international law. A detailed analysis of how the law of international watercourses seeks to reconcile competing economic, social and environmental interests is carried out in section three. The book concludes with a section advocating the need for a fresh approach to international law and sustainable development and offering the foundations for this approach based on lessons learnt from the law of international watercourses.

International Law and Policy of Sustainable Development Duncan French, 2005. It is now generally accepted that sustainable development has become a central objective of the international community. This text examines the politics and history of the term before moving on to analyse relevant principles of international law in this context.

International Law and Sustainable Development Nico J. Schrijver, Friedl Weiss, 2004-08-10. The concept of sustainable development has attracted considerable attention in recent years and has become of pivotal importance not only in scientific and political discourse but also increasingly in the practice of states and of relevant international organisations. Since 1992 and within a remarkably short period of time, sustainable development has been endorsed and recognised in a number of instruments of international law. Thus it is incorporated in various environmental treaties as well as in international fisheries agreements, the 1995 Agreement Establishing the World Trade Organisation (WTO) and EU law. Sustainable development and related concepts also feature in a number of international judicial decisions of the 1990s, for example those of the International Court of Justice and the WTO Appellate Body. The chapters assembled in this book illustrate various aspects of efforts of policy makers, regional and national interest groups to invoke and rely upon international law for the realisation of the objective of sustainable development. They deal in particular with recent examples of the practice of states and of relevant international organisations, especially in such areas as international trade, foreign investment, regulation, human rights and natural resources and waste management. Furthermore, some chapters are dedicated to a review of relevant practice at the regional and national level.
