Sobel, 1989-04-15 Rainbows and exploding stars ancient Greek optics and modern lasers these are but a few facets of this entertaining exploration of light in all areas of science and technology Like the denizens of some brilliant ocean humans are awash in light Surrounded by illuminations both natural and artificial we remain blissfully unaware of how light determines most of life s rhythms and rituals or how it dominates every field of modern science Michael I Sobel a professor of physics at Brooklyn College has attempted no less a task than to enlighten us see how it pervades our language about the many facets of this ubiquitous phenomenon from its earliest stirrings of emotion and wonder in ancient savants to its modern applications in lasers and silicon chips His broader objective however is to show the unity of the natural sciences by using light as a central theme As a guide along the path of light Mr Sobel is excellent James Cornell New York Times Book Review At long last here is a book about a technical subject that anyone can read with interest and understand The author s technical genius and communication skills are combined with excellent lucid sketches concise meaty captions and fascinating photographs Jason R Taylor Science Books and Films The title says it all It is simply a magnificent dissertation on every aspect of light Its lucid

and attractive prose may be read for pleasure and wonder yet the book is also a reference book of authority I doubt whether any question about light cannot be answered by consulting it whether the question is about glow worms or the aurora borealis black bodies of the structure of the eye mirages or fluorescence This is a marvelous book one of the best paperbacks I have ever encountered

**Stars** Durime P. Zherka, 2015-03-20 We admire the beautiful bright stars in the dark night up in the sky while we are doing so many wishes also we are putting so many connections of our activities with stars and moon so to write about stars is interesting With so many interesting information by Astrology awakened my curiosity I decided to write this fiction book in honor of the beautiful and different big groups of stars that are in the constellation Stars are shining by thermonuclear fusion of hydrogen into helium This fusion in its core is releasing energy that traverses in interior of the star and that radiates into outer space This lay of hydrogen into helium gives some stars different beautiful colors like red nebula blue stars or purple stars too Their shining is bright Because the stars have so much mysteries and different stories connected with religious and galactic navigation since in older time and people all around the planet connect the stars and the moon to so many activities and their wishes too it inspired me to write about stars

Michelson* Dorothy Michelson Livingston, 2021-01-14 In this biography of Albert A Michelson 1852 1931 his daughter shares personal reminiscences describes her father s family life two wives six children and a strong temperament and follows Michelson from his birth in Poland to Jewish parents to the United States where his parents brought him at the age of three settling in a gold rush town in Nevada and then in San Francisco Michelson graduated from the US Naval Academy in 1873 studied in Europe taught at Clark University and was head of the department of physics at the University of Chicago from 1894 to 1929 Michelson s passion was the accurate measurement of the speed of light In his first experiment he found it to be 186 320 miles per second which remained the best value available for a generation until Michelson himself bettered it He also invented the interferometer to measure distances using the length of light waves he measured the meter using the wavelength of cadmium light for the International Bureau of Weights and Measures in Paris and he used light interference to determine the size of stars With E W Morley he showed that the absolute motion of the earth through the ether is not measurable contributing to the development of the theory of relativity The first American to receive a Nobel prize in science Michelson received the Nobel prize in physics in 1907 for his optical precision instruments and for the spectroscopic and metrological investigations he made with them This work of a devoted daughter who is not herself a scientist catches the humanity of a complex brilliant man through anecdotes and informed detail The New York Times From personal recollection from much reading and from interviews Mrs Livingston has written a well organized scientific biography of her father In this book the author has attempted not only to discuss his scientific achievements but also to portray Michelson the man his personality and character strengths and foibles He was

dedicated but demanding and could be arrogant strict and severe This book portrays Michelson not as a legend but as a real believable person John N Howard Science A beautiful family portrait of Albert Abraham Michelson America's first Nobel laureate for science This biography is more than an intellectual exercise more than merely of academic or scientific or historical interest It is almost a religious work that begins with a quest for my father and ends with a postscript on Michelson's honors and continuing influence an intelligently organized emotionally motivated intellectually controlled search for meaning in the life and works of a great man of science Michelson's youngest daughter by his second marriage has presented a sensitive artful honest and superbly readable portrait of her father which paints the full life personal relations and human figure of Michelson in a form that is a worthy monument to his memory We learn to know much more intimately where Michelson originated how he matured who recognized and helped him what personal influences shaped his life when and where his own exertions were influential in shaping the life of physics in the United States and the world the author has been remarkably judicious and meticulous in handling her material Loyd S Swenson Jr Isis A non physicist herself the author has relied heavily on physicists who were familiar with her father's work and with the field of optics in general as well as archivists historians of science writers and editors Thus this thorough biography is the fortunate combination of the efforts of many people resulting in a valuable reference work as well as a very readable story about one of America's greatest scientists Its merit lies in the masterful way the author has melded voluminous information from many sources into a sensitive and realistic portrait of Michelson showing him as a very real person with strengths and weaknesses and showing his relation to scientists and the science of his period It is a book well written and well worth reading by physicists and non physicists alike Jean M Bennett Physics Today Mrs Livingston Michelson's last child by his second wife is as she says neither a physicist nor a writer Her book nonetheless has something for both the general reader and the specialist The former will find an interesting and even adventurous life the latter some gems from unpublished correspondence J L Heilbron The British Journal for the History of Science The biography is a well researched accurate and reliable work enhanced by the author's invaluable first hand experience with the subject Michelson's achievements are set against his personal life including his family relationships to other scientists and the struggles which inevitably develop in establishing a college science department George T Ladd The Science Teacher This excellent biography by Michelson's youngest daughter is a judicious mixture of anecdotes and details of the scientific achievements Dorothy Livingston is to be congratulated on this very readable and informative biography of her talented father W W Watson American Scientist An admirable biography of Michelson the man most fascinating David R Topper Technology and Culture **The Special Theory of Relativity** Costas
