**Light Reaction Path of Photosynthesis** Francis K. Fong, 1982      **Light Reaction Path of Photosynthesis** Francis K. Fong, 1982-12-01 This monograph deals with the light reaction pathway in photosynthesis The photophysico chemical events are presented in the order of their occurrence beginning with the collection of sunlight by antenna systems ending with the reduction of CO to carbohydrates Relationships between the structural 2 properties and kinetic effects of primary and secondary events spanning time 12 domains in the range 10<sup>-12</sup> s are explored Photosynthesis is examined in terms of a light induced redistribution of reaction intermediates common to the biosynthesis and metabolic degradation of carbohydrates The experimental procedures and results reviewed in the book are representative of developments in instrumental methods and conceptual formulations in this area during the past decade In particular picosecond spectroscopy time resolved and magnetic resonance techniques along with structural and photoelectrochemical models of photosynthesis have provided clues for the molecular mechanisms of energy migration from the antenna systems to the reaction centers and of succeeding stages of photochemical events leading to the carbon reduction cycle The preparation of this monograph resulted from the efforts of workers in distantly separated institutions The writer gratefully acknowledges the responsive collaboration of the contributing authors and members of the Springer editorial staff that made possible completion of the manuscript

Molecular Biology, Biochemistry, and Biophysics, 1986      *International Review of Cytology*, 1989-01-01 International Review of Cytology      **Photosynthesis** Bacon Ke, 2006-04-11 Photosynthesis Photobiology and Photobiophysics is the first single authored book in the Advances in Photosynthesis Series It provides an overview of the light reactions and electron transfers in both oxygenic and anoxygenic photosynthesis The scope of the book is characterized by the time frame in which the light reactions and the subsequent electron transfers take place namely between 10<sup>-12</sup> s and 10<sup>-3</sup> s The book is divided into five parts An Overview Bacterial Photosynthesis Photosystem II Photosystem I and Proton Transport and Photophosphorylation In discussing the structure and function of various protein complexes we begin with an introductory chapter followed by chapters on light harvesting complexes the primary electron donors and the primary electron acceptors and finally the secondary electron donors The discussion on electron acceptors is presented in the order of their discovery to convey a sense of history in parallel with the advancement in instrumentation of increasing time resolution The book includes a large number of stereo pictures showing the three dimensional structure of various photosynthetic proteins which can be easily viewed with unaided eyes This book is designed to be used as a textbook in a graduate or upper division undergraduate course in photosynthesis photobiology plant physiology biochemistry and biophysics it is equally suitable as a resource book for students teachers and researchers in the areas of molecular and cellular biology integrative biology microbiology and plant biology      **Ecology of Photosynthesis in Sun and Shade** John R. **Biophysics** W. Hoppe, W. Lohmann, H. Markl, H. Ziegler, 2012-12-06 What is biophysics As with all subjects which straddle traditional boundaries between fields it eludes a precise definition Furthermore it is impossible to do biophysics without having a certain foundation of knowledge in biology physics physical chemistry chemistry and biochemistry One approach to a biophysics textbook would be to refer the student to the literature of these neighboring fields and to leave the selection of the appropriate supplementary material up to the student The editors of this volume are of the opinion that it is more useful and less time consuming to present a selection of the supplementary knowledge in concentrated form together with the subject matter specific to biophysics The reader will thus find in this book introductions to such subjects as the structure and function of the cell the chemical structure of biogenic macromolecules and even theoretical chemistry What indeed is biophysics Must we consider it to include physiology electromedicine radiation medicine etc The field has evolved continuously in recent years Molecular understanding of life processes has come more and more to the fore Just as the field of molecular physics has developed to describe structures and processes in the realm of non living systems there has been a corresponding development of molecular biophysics *Revue roumaine de biochimie* ,1983 Annual Review of Biophysics and Biophysical Chemistry Donald M.
