

Viscosity of Dilute Polymer Solutions

For dilute polymer solutions, one is normally interested not in the value of η itself but in *specific viscosity* $\eta_s = (\eta - \eta_0) / \eta_0$ (η_0 is the viscosity of pure solvent) and *characteristic viscosity* $[\eta] = (\eta - \eta_0) / \eta_0 \rho$, where ρ is the density of monomer units in the solution.

For the solution of impenetrable spheres of radius R Einstein derived

$$\eta = \eta_0(1 + 2.5\Phi)$$

where Φ is the volume fraction occupied by the spheres in the solution. If each sphere consists of N particles (monomer units) of mass m , and their density is ρ , we have

$$\Phi = \frac{N_A \rho}{mN} \frac{4\pi}{3} R^3 = \frac{\rho N_A}{M} \frac{4\pi}{3} R^3$$

where M is molecular mass of the polymer chain, $M = mN$, and N_A is Avogadro number .

Light Scattering From Dilute Polymer Solutions:

Light Scattering from Dilute Polymer Solutions Donald McIntyre, Fred Gornick, 1964 **Light scattering from dilute polymer solutions**, ed Donald McIntyre, Fred Gornick, *Light Scattering from Polymer Solutions and Nanoparticle Dispersions* Wolfgang Schärtl, 2007-08-02 Light scattering is a very powerful method for characterizing the structure of polymers and nanoparticles in solution As part of the Springer Laboratory series this book provides a simple to read and illustrative textbook probing the seemingly very complicated topic of light scattering from polymers and nanoparticles in dilute solution and goes further to cover some of the latest technical developments in experimental light scattering

Classical Light Scattering from Polymer Solutions Pavel Kratochvíl, 1987 Classical light scattering from dilute polymer solutions is one of the few absolute rigorously founded methods for the determination of molar mass and molecular size of macromolecular substances and for the quantitative characterization of solute solvent interaction Light scattering is thus one of the most fundamental methods of the physical chemistry of polymers and the present book provides an introduction to this technique elements of practice and application of light scattering Although there are a number of advanced monographs and reviews currently available on light scattering from polymer solutions the appearance of this book marks the first introductory text of its kind Polymer chemists wishing to make a start in light scattering will find this book an indispensable aid in their work

Low Angle Light Scattering in Dilute Polymer Solutions Ronald D. Mole, City of London Polytechnic, 1972 **International science review series**, 1964 [Light Scattering from Dilute Polymer Solutions](#), Edited by D. McIntyre [and] F. Gornick D. McIntyre, F. Gornick, 1964

Dynamic Light Scattering in Semi-dilute Polymer Solutions Steven Joseph Ballogé, 1986 **Phenomenology of Polymer Solution Dynamics** George D. J. Phillies, 2011-10-06 Presenting a completely new approach to examining how polymers move in non dilute solution this book focuses on experimental facts not theoretical speculations and concentrates on polymer solutions not dilute solutions or polymer melts From centrifugation and solvent dynamics to viscosity and diffusion experimental measurements and their quantitative representations are the core of the discussion The book reveals several experiments never before recognized as revealing polymer solution properties A novel approach to relaxation phenomena accurately describes viscoelasticity and dielectric relaxation and how they depend on polymer size and concentration Ideal for graduate students and researchers interested in the properties of polymer solutions the book covers real measurements on practical systems including the very latest results Every significant experimental method is presented in considerable detail giving unprecedented coverage of polymers in solution
