**Irish in Ontario, 1st Edition** Donald Harman Akenson, 1984-08-01 Hailed as one of the most important books on social sciences of the last fifty years by the Social Sciences Federation of Canada Akenson argues that despite the popular conception of the Irish as a city people those who settled in Ontario were primarily rural and small town dwellers Though it is often claimed that the experience of the Irish in their homeland precluded their successful settlement on the frontier in North America Akenson's research proves that the Irish migrants to Ontario not only chose to live chiefly in the hinterlands but that they did so with marked success Akenson also suggests that by using Ontario as an historical laboratory it is possible to make valid assessments of the real differences between Irish Protestants and Irish Catholics characteristics which he contends are much more precisely measurable in the neutral environment of central Canada than in the turbulent Irish homeland While Akenson is careful not to over generalize his findings he contends that the case of Ontario seriously calls into question conventional beliefs about the cultural limitations of the Irish Catholics not only in Canada but throughout North America

**2013 Update To Esoptrics' Try To End The Notion Of The Continuum & The "Absurd" Math It Begets** Edward N. Haas,2014-01-08 For at least 2 500 years now one of the most if not the most hotly widely and often contested issues is the notion of the continuum It s a notion which looks upon time space locomotion and change as continuous which is to say it implies there is no limit to the smallness of the smallest segment of each Thereby it necessarily invokes the notion of infinite divisibility The latter then demands mathematical conclusions so manifestly self contradictory they boggle the mind no less than does the notion of a square circle No wonder then they move many a renowned thinker such as John Locke and David Hume to proclaim those conclusions absurd See my quotes from them on pages II VIII **Combustion Waves and Fronts in Flows** Paul Clavin,Geoff Searby,2016-07-28 Combustion is a fascinating phenomenon coupling complex chemistry to transport mechanisms and nonlinear fluid dynamics This book provides an up to date and comprehensive presentation of the nonlinear dynamics of combustion waves and other non equilibrium energetic systems The major advances in this field have resulted from analytical studies of simplified models performed in close relation with carefully controlled laboratory experiments The key to understanding the complex phenomena is a systematic reduction of the complexity of the basic equations Focusing on this fundamental approach the book is split into three parts Part I provides physical insights for physics oriented readers Part II presents detailed technical analysis using perturbation methods for theoreticians and Part III recalls the necessary background knowledge in physics chemistry and fluid dynamics This structure makes the content accessible to newcomers to the physics of unstable fronts in flows whilst also offering advanced material for scientists who wish to improve their knowledge
