Likelihood-Based Inference in Cointegrated Vector Autoregressive Models Søren Johansen, *Structural Vector Autoregressive Analysis* Lutz Kilian, Helmut Lütkepohl, 2017-11-23

Structural vector autoregressive VAR models are important tools for empirical work in macroeconomics finance and related fields This book not only reviews the many alternative structural VAR approaches discussed in the literature but also highlights their pros and cons in practice It provides guidance to empirical researchers as to the most appropriate modeling choices methods of estimating and evaluating structural VAR models The book traces the evolution of the structural VAR methodology and contrasts it with other common methodologies including dynamic stochastic general equilibrium DSGE models It is intended as a bridge between the often quite technical econometric literature on structural VAR modeling and the needs of empirical researchers The focus is not on providing the most rigorous theoretical arguments but on enhancing the reader's understanding of the methods in question and their assumptions Empirical examples are provided for illustration

Time Series Models D.R. Cox, D.V. Hinkley, O.E. Barndorff-Nielsen, 2020-11-25 The analysis prediction and interpolation of economic and other time series has a long history and many applications Major new developments are taking place driven partly by the need to analyze financial data The five papers in this book describe those new developments from various viewpoints and are intended to be an introduction accessible to readers from a range of backgrounds The book arises out of the second Seminaire Européen de Statistique SEMSTAT held in Oxford in December 1994 This brought together young statisticians from across Europe and a series of introductory lectures were given on topics at the forefront of current research activity The lectures form the basis for the five papers contained in the book The papers by Shephard and Johansen deal respectively with time series models for volatility i.e. variance heterogeneity and with cointegration Clements and Hendry analyze the nature of prediction errors A complementary review paper by Laird gives a biometrical view of the analysis of short time series Finally Astrup and Nielsen give a mathematical introduction to the study of option pricing Whilst the book draws its primary motivation from financial series and from multivariate econometric modelling the applications are potentially much broader

Econometrics John D. Levendis, 2019-01-31 In this book the author rejects the theorem proof approach as much as possible and emphasize the practical application of econometrics They show with examples how to calculate and interpret the numerical results This book begins with students estimating simple univariate models in a step by step fashion using the popular Stata software system Students then test for stationarity while replicating the actual results from hugely influential papers such as those by Granger and Newbold and Nelson and Plosser Readers will learn about structural breaks by replicating papers by Perron and Zivot and Andrews They then turn to models of conditional volatility replicating papers by Bollerslev Finally students estimate multi equation models such as vector autoregressions and vector error correction mechanisms replicating the results in influential papers by Sims and Granger The book contains many worked out examples and many data driven exercises While intended primarily for graduate students and advanced undergraduates practitioners will also find the book useful

Aspects of Globalisation Christopher Tsoukis, George M. Agiomirgianakis, Tapan Biswas, 2004 Furthermore diverse methodologies are followed including the widespread use of state of the art econometrics reflecting the recent trend in economic analysis Equally important many of the papers offer clear cut policy conclusions and should therefore be of direct relevance to policy minded analysts and policy makers Jacket *Econometric Business Cycle Research* Jan Jacobs, 2012-12-06 Econometric Business Cycle Research deals with econometric business cycle research EBCR a term introduced by the Nobel laureate Jan Tinbergen for his econometric method of testing economic business cycle theories EBCR combines economic theory and measurement in the study of business cycles i e ups and downs in overall economic activity We assess four methods of EBCR business cycle indicators simultaneous equations models vector autoregressive systems and real business indicators After a sketch of the history of the methods we investigate whether the methods meet the goals of EBCR the three traditional ones description forecasting and policy evaluation and the one Tinbergen introduced the implementation testing of business cycles The first three EBCR methods are illustrated for the Netherlands a typical example of a small open economy The main conclusion of the book is that simultaneous equation models are the best vehicle for EBCR if all its goals are to be attained simultaneously This conclusion is based on a fairly detailed assessment of the methods and is not over turned in the empirical illustrations The main conclusion does not imply the end of other EBCR methods Not all goals have to be met with a single vehicle other methods might serve the purpose equally well or even better For example if one is interested in business cycle forecasts one might prefer a business cycle indicator or vector autoregressive system A second conclusion is that many ideas concepts that play an important role in current discussions about econometric methodology in general and EBCR in particular were put forward in the 1930s and 1940s A third conclusion is that it is difficult if not impossible to compare the outcomes of RBC models to outcomes of the other three methods because RBC modellers are not interested in modelling business cycles on an observation per observation basis A more general conclusion in this respect is that methods should adopt the same concept of business cycles to make them comparable

The Dynamic Macroeconomic Effects of Public Capital Christophe Kamps, 2004-12-22 This book analyzes the dynamic macroeconomic effects of public capital in industrialized countries The issue of whether public capital is productive has received a great deal of recent attention Yet existing empirical analyses have been limited to a small set of countries This book presents a new database that provides internationally comparable capital stock estimates for 22 OECD countries for the 1960-2001 period Building on this database the book estimates the dynamic effects of public capital using a variety of econometric methods The results suggest that public capital is productive in OECD countries on average The theoretical analysis based on a dynamic general equilibrium model shows that the effects of public capital depend crucially on the way the government chooses to finance additional spending
