Limnological Aspects of Recreational Lakes Kenneth Marsh Mackenthun, William Marcus Ingram, Ralph Porges, United States. Division of Water Supply and Pollution Control, 1964 *Limnological Aspects of Recreational Lakes* considers the many problems associated with the recreational use of lakes, reservoirs, and ponds. These standing water bodies receive the most concentrated and varied recreational use of any waters and provide enjoyment to the greatest number of people. Individuals using such areas soon become aware of associated biological problems and often demand remedial measures to alleviate developing nuisances or the prevention of them before they arise. This book is written for the person faced with problems of interpretation and management in dealing with the phenomena of recreational lakes. In most States a permit or permission must be obtained from an appropriate agency prior to the institution of controls. Then controls are instituted, the recommended controlling agent, and its field application must be tempered with a scientist's astute knowledge of both the problem and the ecological ramifications of a control program.
