Linear Algebra And Smarandache Linear Algebra:

Linear Algebra and Smarandache Linear Algebra W. B. Vasantha Kandasamy, 2003 In this book the author analyzes the Smarandache linear algebra and introduces several other concepts like the Smarandache semilinear algebra Smarandache bilinear algebra and Smarandache anti linear algebra We indicate that Smarandache vector spaces of type II will be used in the study of neutrosophic logic and its applications to Markov chains and Leontief Economic models both of these research topics have intense industrial applications The Smarandache linear algebra is defined to be a Smarandache vector space of type II on which there is an additional operation called product such that for all a, b in V ab is in V The Smarandache vector space of type II is defined to be a module V defined over a Smarandache ring R such that V is a vector space over a proper subset k of R where k is a field

Super Linear Algebra W. B. Vasantha Kandasamy, Florentin Smarandache, 2008 Super Linear Algebras are built using super matrices These new structures can be applied to all fields in which linear algebras are used Super characteristic values exist only when the related super matrices are super square diagonal super matrices Super diagonalization analogous to diagonalization is obtained These newly introduced structures can be applied to Computer Sciences Markov Chains and Fuzzy Models

n-Linear Algebra of Type 1 and Its Applications W. B. Vasantha Kandasamy, Florentin Smarandache, 2008 n Linear Algebra of type I introduced in this book find applications in Markov chains and Leontief economic models Innovative scientists and engineers can adopt this concept in Fuzzy Finite Element analysis of mechanical structures with uncertain parameters

Interval Linear Algebra W. B. Vasantha Kandasamy, Florentin Smarandache, 2010 Interval Arithmetic or Interval Mathematics was developed in the 1950s and 1960s as an approach to rounding errors in mathematical computations However there was no methodical development of interval algebraic structures to this date This book provides a systematic analysis of interval algebraic structures viz interval linear algebra using intervals of the form $0 \leq a \leq b$

Non Associative Linear Algebras W. B. Vasantha Kandasamy, Florentin Smarandache, 2012

Smarandache Special Definite Algebraic Structures W. B. Vasantha Kandasamy, 2009-01-01 We study these new Smarandache algebraic structures which are defined as structures which have a proper subset which has a weak structure A Smarandache Weak Structure on a set S means a structure on S that has a proper subset P with a weaker structure By proper subset of a set S we mean a subset P of S different from the empty set from the original set S and from the idempotent elements if any A Smarandache Strong Structure on a set S means a structure on S that has a proper subset P with a stronger structure A Smarandache Strong Weak Structure on a set S means a structure on S that has two proper subsets P with a stronger structure and Q with a weaker structure

Neutrosophic Bilinear Algebras and their Generalizations W. B. Vasantha Kandasamy, Florentin Smarandache, 2010 This book introduces over one hundred new concepts related to neutrosophic bilinear algebras and their generalizations Illustrated by more than 225 examples these innovative new notions find applications in various fields

Vasantha Kandasamy, Florentin Smarandache,2013 **Superbimatrices and Their Generalizations** W. B. Vasantha Kandasamy,Florentin Smarandache,2009 In this book the authors introduce the notion of superbimatrices and generalize it to that of supertrimatrices and super n matrices A study of these innovative structures is best suited to our times since superbimatrices find their applications in Fuzzy Models Leontief Economics Model and computer data storage DSm field and linear algebra of refined labels Florentin Smarandache ,Jean Dezert ,Xinde Li , This chapter presents the DSm Field and Linear Algebra of Refined Labels FLARL in DSmT framework in order to work precisely with qualitative labels for information fusion We present and justify the basic operators on qualitative labels addition subtraction multiplication division root power etc *Introduction to Bimatrices* W. B. Vasantha Kandasamy,Florentin Smarandache,K. Ilanthenral,2005 Generally any real world problem is not always solvable because in that not only a percentage of uncertainty is present but also a certain percentage of indeterminacy is present The presence of uncertainty has been analyzed using fuzzy logic In this book the amount of indeterminacy is being analyzed using neutrosophic logic Most of these models use the concept of matrices Matrices have certain limitation when the models are time dependent and any two experts opinions are being studied simultaneously one cannot compare both of them at each stage The new concept of bimatrices would certainly cater to these needs A bimatrix $AB \begin{matrix} A1 & U & B2 \end{matrix}$ where $A1$ and $A2$ are distinct matrices of arbitrary order This book introduces the concept of bimatrices and studies several notions like bieigen values bieigen vectors characteristic bipolynomials bitransformations bioperators and bidiagonalization Further we introduce and explore the concepts like fuzzy bimatrices neutrosophic bimatrices and fuzzy neutrosophic bimatrices which will find its application in fuzzy and neutrosophic logics **Bialgebraic Structures and Smarandache Bialgebraic Structures** W. B. Vasantha Kandasamy,2003-01-01 Generally the study of algebraic structures deals with the concepts like groups semigroups groupoids loops rings near rings semirings and vector spaces The study of bialgebraic structures deals with the study of bistructures like bigroups biloops bigroupoids bisemigroups birings binear rings bisemirings and bivector spaces A complete study of these bialgebraic structures and their Smarandache analogues is carried out in this book For examples A set S with two binary operations and is called a bisemigroup of type II if there exists two proper subsets $S1$ and $S2$ of S such that $S = S1 \cup S2$ and $S1$ is a semigroup $S2$ is a semigroup Let S be a bisemigroup We call S a Smarandache bisemigroup S bisemigroup if S has a proper subset P such that P is a bigroup under the operations of S Let L be a non empty set with two binary operations L is said to be a biloop if L has two nonempty finite proper subsets $L1$ and $L2$ of L such that $L = L1 \cup L2$ and $L1$ is a loop $L2$ is a loop or a group Let L be a biloop we call L a Smarandache biloop S biloop if L has a proper subset P which is a bigroup Let G be a non empty set We call G a bigroupoid if $G = G1 \cup G2$ and satisfies the following $G1$ is a groupoid i.e the operation is non associative $G2$ is a semigroup Let G be a non empty set with $G = G1 \cup G2$ we call G a Smarandache bigroupoid S bigroupoid if

G_1 and G_2 are distinct proper subsets of G such that $G = G_1 \cup G_2$ neither G_1 nor G_2 are included in each other G_1 is a S groupoid G_2 is a S semigroup A nonempty set R with two binary operations and is said to be a biring if $R = R_1 \cup R_2$ where R_1 and R_2 are proper subsets of R and R_1 is a ring R_2 is a ring A Smarandache biring S biring R is a non empty set with two binary operations and such that $R = R_1 \cup R_2$ where R_1 and R_2 are proper subsets of R and R_1 is a S ring R_2 is a S ring
