### **Operator Theory in Function Spaces** Kehe Zhu, 2007

This book covers Toeplitz operators Hankel operators and composition operators on both the Bergman space and the Hardy space The setting is the unit disk and the main emphasis is on size estimates of these operators boundedness compactness and membership in the Schatten classes Most results concern the relationship between operator theoretic properties of these operators and function theoretic properties of the inducing symbols Thus a good portion of the book is devoted to the study of analytic function spaces such as the Bloch space Besov spaces and BMOA whose elements are to be used as symbols to induce the operators we study The book is intended for both research mathematicians and graduate students in complex analysis and operator theory The prerequisites are minimal a graduate course in each of real analysis complex analysis and functional analysis should sufficiently prepare the reader for the book Exercises and bibliographical notes are provided at the end of each chapter These notes will point the reader to additional results and problems Kehe Zhu is a professor of mathematics at the State University of New York at Albany His previous books include *Theory of Bergman Spaces* Springer 2000 with H Hedenmalm and B Korenblum and *Spaces of Holomorphic Functions in the Unit Ball* Springer 2005 His current research interests are holomorphic function spaces and operators acting on them

[Selected Preserver Problems on Algebraic Structures of Linear Operators and on Function Spaces](#) L. Molnár, 2006-11-15 The territory of preserver problems has grown continuously within linear analysis This book presents a cross section of the modern theory of preservers on infinite dimensional spaces operator spaces and function spaces through the author s corresponding results Special emphasis

is placed on preserver problems concerning some structures of Hilbert space operators which appear in quantum mechanics In addition local automorphisms and local isometries of operator algebras and function algebras are discussed in detail

**Integral Representation** Walter Roth,2023-10-04 This book presents a wide ranging approach to operator valued measures and integrals of both vector valued and set valued functions It covers convergence theorems and an integral representation for linear operators on spaces of continuous vector valued functions on a locally compact space These are used to extend Choquet theory which was originally formulated for linear functionals on spaces of real valued functions to operators of this type

**Narrow Operators on Function Spaces and Vector Lattices** Mikhail Popov,Beata Randrianantoanina,2012-12-06 Most classes of operators that are not isomorphic embeddings are characterized by some kind of a smallness condition Narrow operators are those operators defined on function spaces that are small at 1 0 1 valued functions e g compact operators are narrow The original motivation to consider such operators came from theory of embeddings of Banach spaces but since then they were also applied to the study of the Daugavet property and to other geometrical problems of functional analysis The question of when a sum of two narrow operators is narrow has led to deep developments of the theory of narrow operators including an extension of the notion to vector lattices and investigations of connections to regular operators Narrow operators were a subject of numerous investigations during the last 30 years This monograph provides a comprehensive presentation putting them in context of modern theory It gives an in depth systematic exposition of concepts related to and influenced by narrow operators starting from basic results and building up to most recent developments The authors include a complete bibliography and many attractive open problems

**Theory of Linear Operators in Hilbert Space** Naum Il'ich Akhiezer,Izrail' Markovich Glazman,1961 *Composition Operators on Function Spaces* R.K. Singh,J.S. Manhas,1993-11-03 This volume of the Mathematics Studies presents work done on composition operators during the last 25 years Composition operators form a simple but interesting class of operators having interactions with different branches of mathematics and mathematical physics After an introduction the book deals with these operators on  $L_p$  spaces This study is useful in measurable dynamics ergodic theory classical mechanics and Markov process The composition operators on functional Banach spaces including Hardy spaces are studied in chapter III This chapter makes contact with the theory of analytic functions of complex variables Chapter IV presents a study of these operators on locally convex spaces of continuous functions making contact with topological dynamics In the last chapter of the book some applications of composition operators in isometries ergodic theory and dynamical systems are presented An interesting interplay of algebra topology and analysis is displayed This comprehensive and up to date study of composition operators on different function spaces should appeal to research workers in functional analysis and operator theory post graduate students of mathematics and statistics as well as to physicists and engineers

**Operator Theory, Function Spaces, and Applications** Tanja Eisner,Birgit Jacob,André Ran,Hans Zwart,2016-09-24 This volume collects a selected number of papers

presented at the International Workshop on Operator Theory and its Applications IWOTA held in July 2014 at Vrije Universiteit in Amsterdam. Main developments in the broad area of operator theory are covered with special emphasis on applications to science and engineering. The volume also presents papers dedicated to the eightieth birthday of Damir Arov and to the sixty fifth birthday of Leiba Rodman, both leading figures in the area of operator theory and its applications in particular to systems theory.

Linear Operators in Function Spaces G. Arsene, 1989-12-01. The Operator Theory conferences organized by the Department of Mathematics of INCREST and the Department of Mathematics of the University of Timișoara are conceived as a means to promote cooperation and exchange of information between specialists in all areas of operator theory. This book comprises carefully selected papers on theory of linear operators and related fields. Original results of new research in fast developing areas are included. Several contributed papers focus on the action of linear operators in various function spaces. Recent advances in spectral theory and related topics: operators in indefinite metric spaces, dual algebras and the invariant subspace problem, operator algebras and group representations as well as applications to mathematical physics are presented. The research contacts of the Department of Mathematics of INCREST with the National Committee for Science and Technology of Romania provided means for developing the research activity in mathematics; they represent the generous framework of these meetings too. It is our pleasure to acknowledge the financial support of UNESCO which also contributed to the success of this meeting. We are indebted to Professor Israel Gohberg for including these Proceedings in the OT Series and for valuable advice in the editing process. Birkhäuser Verlag was very cooperative in publishing this volume. Camelia Minculescu, Iren Nemethi and Rodica Stoenescu dealt with the difficult task of typing the whole manuscript using a Rank Xerox 860 word processor; we thank them for this excellent job.

**Functions, Spaces, and Expansions** Ole Christensen, 2010-05-27. This graduate level textbook is a detailed exposition of key mathematical tools in analysis aimed at students, researchers and practitioners across science and engineering. Every topic covered has been specifically chosen because it plays a key role outside the field of pure mathematics. Although the treatment of each topic is mathematical in nature and concrete applications are not delineated, the principles and tools presented are fundamental to exploring the computational aspects of physics and engineering. Readers are expected to have a solid understanding of linear algebra in  $\mathbb{R}^n$  and in general vector spaces. Familiarity with the basic concepts of calculus and real analysis including Riemann integrals and infinite series of real or complex numbers is also required.

*Operator Functions And Operator Equations* Michael Gil', 2017-09-08. This book is devoted to norm estimates for operator valued functions of one and two operator arguments as well as to their applications to spectrum perturbations of operators and to linear operator equations, i.e. to equations whose solutions are linear operators. Linear operator equations arise in both mathematical theory and engineering practice. The norm estimates suggested in the book have applications to the theories of ordinary differential, difference, functional differential and integro differential equations as well as to the theories of integral operators and

analytic functions This book provides new tools for specialists in matrix theory and functional analysis A significant part of the book covers the theory of triangular representations of operators that was developed by L de Branges M S Brodskii I C Gohberg M G Krein M S Livsic and other mathematicians *Function Spaces, Proceedings Of The Sixth Conference* Ryszard Grzaslewicz, Henryk Hudzik, Julian Musielak, Czeslaw Ryll-nardzewski, 2003-04-03 The papers included in this volume deal with the following topics convex analysis operator theory interpolation theory theory of real functions theory of analytic functions bifurcation theory Fourier analysis functional analysis measure theory geometry of Banach spaces history of mathematics *Function Spaces* Krzysztof Jarosz, 1999 This proceedings volume presents 36 papers given by leading experts during the Third Conference on Function Spaces held at Southern Illinois University at Edwardsville A wide range of topics in the subject area are covered Most papers are written for nonexperts so the book can serve as a good introduction to the topic for those interested in this area The book presents the following broad range of topics including spaces and algebras of analytic functions of one and of many variables  $L_p$  spaces spaces of Banach valued functions isometries of function spaces geometry of Banach spaces and related subjects Known results open problems and new discoveries are featured At the time of publication information about the book the conference and a list and pictures of contributors are available on the Web at [www.siu.edu/MATH/conference.htm](http://www.siu.edu/MATH/conference.htm) *Operator Theory in Function Spaces and Banach Lattices* C.B. Huijsmans, M.A. Kaashoek, W.A.J. Luxemburg, B.de Pagter, 2012-12-06 This volume is dedicated to A C Zaanen one of the pioneers of functional analysis and eminent expert in modern integration theory and the theory of vector lattices on the occasion of his 80th birthday The book opens with biographical notes including Zaanen's curriculum vitae and list of publications It contains a selection of original research papers which cover a broad spectrum of topics about operators and semigroups of operators on Banach lattices analysis in function spaces and integration theory Special attention is paid to the spectral theory of operators on Banach lattices in particular to the one of positive operators Classes of integral operators arising in systems theory optimization and best approximation problems and evolution equations are also discussed The book will appeal to a wide range of readers engaged in pure and applied mathematics **Function Spaces and Operators between them** José Bonet, David Jornet, Pablo Sevilla-Peris, 2023-10-28 The aim of this work is to present in a unified and reasonably self contained way certain aspects of functional analysis which are needed to treat function spaces whose topology is not derived from a single norm their topological duals and operators between those spaces We treat spaces of continuous analytic and smooth functions as well as sequence spaces Operators of differentiation integration composition multiplication and partial differential operators between those spaces are studied A brief introduction to Laurent Schwartz's theory of distributions and to Lars Hörmander's approach to linear partial differential operators is presented The novelty of our approach lies mainly on two facts First of all we show all these topics together in an accessible way stressing the connection between them Second we keep it always at a level that is accessible to beginners and young researchers

Moreover parts of the book might be of interest for researchers in functional analysis and operator theory Our aim is not to build and describe a whole complete theory but to serve as an introduction to some aspects that we believe are interesting We wish to guide any reader that wishes to enter in some of these topics in their first steps Our hope is that they learn interesting aspects of functional analysis and become interested to broaden their knowledge about function and sequence spaces and operators between them The text is addressed to students at a master level or even undergraduate at the last semesters since only knowledge on real and complex analysis is assumed We have intended to be as self contained as possible and wherever an external citation is needed we try to be as precise as we can Our aim is to be an introduction to topics in or connected with different aspects of functional analysis Many of them are in some sense classical but we tried to show a unified direct approach some others are new This is why parts of these lectures might be of some interest even for researchers in related areas of functional analysis or operator theory There is a full chapter about transitive and mean ergodic operators on locally convex spaces This material is new in book form It is a novel approach and can be of interest for researchers in the area

**Function Spaces and Applications** David Eric Edmunds, 2000 Developed from the proceedings an international conference held in 1997 Function Spaces and Applications presents the work of leading mathematicians in the vital and rapidly growing field of functional analysis

**Function Spaces and Partial Differential Equations** Ali Taheri, 2015 This is a book written primarily for graduate students and early researchers in the fields of Analysis and Partial Differential Equations PDEs Coverage of the material is essentially self contained extensive and novel with great attention to details and rigour The strength of the book primarily lies in its clear and detailed explanations scope and coverage highlighting and presenting deep and profound inter connections between different related and seemingly unrelated disciplines within classical and modern mathematics and above all the extensive collection of examples worked out and hinted exercises There are well over 700 exercises of varying level leading the reader from the basics to the most advanced levels and frontiers of research The book can be used either for independent study or for a year long graduate level course In fact it has its origin in a year long graduate course taught by the author in Oxford in 2004 5 and various parts of it in other institutions later on A good number of distinguished researchers and faculty in mathematics worldwide have started their research career from the course that formed the basis for this book

**Function Spaces in Modern Analysis** Krzysztof Jarosz, 2011-07-18 This volume contains the proceedings of the Sixth Conference on Function Spaces which was held from May 18 22 2010 at Southern Illinois University at Edwardsville The papers cover a broad range of topics including spaces and algebras of analytic functions of one and of many variables and operators on such spaces spaces of integrable functions spaces of Banach valued functions isometries of function spaces geometry of Banach spaces and other related subjects

**Function Spaces** Ryszard Grz??lewicz, 2003 The papers included in this volume deal with the following topics convex analysis operator theory interpolation theory theory of real functions theory of analytic functions bifurcation theory Fourier

analysis functional analysis measure theory geometry of Banach spaces history of mathematics      **Linear and Multilinear Algebra and Function Spaces** A. Bourhim, J. Mashregi, L. Oubbi, Z. Abdelali, 2020-05-05 This volume contains the proceedings of the International Conference on Algebra and Related Topics held from July 2-5 2018 at Mohammed V University Rabat Morocco Linear preserver problems demand the characterization of linear maps between algebras that leave invariant certain properties or certain subsets or relations One of the most intractable unsolved problems is Kaplansky's conjecture every surjective unital invertibility preserving linear map between two semisimple Banach algebras is a Jordan homomorphism Recently there has been an upsurge of interest in nonlinear preservers where the maps studied are no longer assumed linear but instead a weak algebraic condition is somehow involved through the preserving property This volume contains several articles on various aspects of preservers including such topics as Jordan isomorphisms Aluthge transform joint numerical radius on  $C^*$  algebras admissible complete algebras and Gelfand Mazur algebras The volume also contains a survey on recent progress on local spectrum preserving maps Several articles in the volume present results about weighted spaces and algebras of holomorphic or harmonic functions including biduality in weighted spaces of analytic functions interpolation in the analytic Wiener algebra and weighted composition operators on non locally convex weighted spaces
