Sooner or later power system protection is going to cost money. How much is entirely up to you. Setting up a safe and effective AC power system from the very beginning can help avoid costly downtime and repairs, provide backup power during system outages and minimize workplace accidents. For the past 15 years, Jerry Whitaker's *AC Power Systems Handbook* has supplied industry professionals with a comprehensive practical guide to the key elements of AC power for commercial and industrial systems. This third edition is thoroughly revised and completely reorganized to reflect the changing demands of modern power systems. To ease navigation, many sections are now presented as separate chapters filled with updated and expanded information. Most notably, the author adds heavily in the areas of transient suppression hardware, electrical system components and power system fundamentals. Following a logical progression, coverage flows from power system operation to protecting equipment loads, selecting the right level of protection, grounding, standby power and safety. Along the way, the author paints a clear picture of the sources of disturbances, the tradeoffs involved for different options and the advantages and limitations of various approaches. Streamlined to be a hands-on, user-oriented guide, the *AC Power Systems Handbook* offers expert guidance on designing and installing a safe and efficient power system. *Emergency & standby power systems*, 1974. Provide guidance in determining what specifications should be made in selection and installation of standby and emergency power systems. *Critical Infrastructure Assurance Guidelines for Municipal Governments: Planning for Electric Power Disruptions*. Chicago Metropolitan Area Critical Infrastructure Protection Program, 2001. The economic prosperity and the well-being of our nation's communities depend on the reliable functioning of critical infrastructures: transportation, banking and finance, information and communications, water supply systems, emergency services and especially energy: electric power, oil and natural gas. In the new economy, these infrastructures are increasingly reliant on information technologies and are strongly affected by restructuring and other market forces. They are much more heavily interconnected than ever before, and disruptions in one system can have significant adverse consequences both locally and regionally. Communities often are not well prepared to deal with widespread infrastructure failures which could become commonplace in the new millennium. This report, prepared on behalf of the partnership, is a first-of-a-kind effort to compile this type of information on the electric power system in a form that municipal governments can use and adapt to local conditions. ComEd and Harza Engineering Company have provided valuable support for this effort. Argonne National Laboratory's Infrastructure Assurance Center compiled and integrated the planning information.
