Emergent Self:

The Emergent Self William Hasker, 2015-11-20 In *The Emergent Self* William Hasker joins one of the most heated debates in analytic philosophy that over the nature of mind His provocative and clearly written book challenges physicalist views of human mental functioning and advances the concept of mind as an emergent individual Hasker begins by mounting a compelling critique of the dominant paradigm in philosophy of mind showing that contemporary forms of materialism are seriously deficient in confronting crucial aspects of experience He further holds that popular attempts to explain the workings of mind in terms of mechanistic physics cannot succeed He then criticizes the two versions of substance dualism most widely accepted today Cartesian and Thomistic and presents his own theory of emergent dualism Unlike traditional substance dualisms Hasker's theory recognizes the critical role of the brain and nervous system for mental processes It also avoids the mechanistic reductionism characteristic of recent materialism Hasker concludes by addressing the topic of survival following bodily death After demonstrating the failure of materialist views to offer a plausible and coherent account of that possibility he considers the implications of emergentism for notions of resurrection and the afterlife [The Emergent Self](#) Adrian L. The Emergent Method: A Modern Science Approach to the Phenomenology and Ethics of Emergentism Michael E. Kean, 2019-02-06 Emergentism New form of Emergentism Ethics Philosophy of Mind Popular Science Self Improvement Phenomenology Existentialism Emergentism is the study and tentative explanation of how order arises in everything from quantum fluctuations to human consciousness The aim of *The Emergent Method* is to use the new philosophy of Emergentism and the findings of modern science to challenge the way we think and thereby help fulfil our highest purposes

The Emergent Self Peter Philippon, 2018-03-26 This book tracks a particular understanding of self philosophically from research evidence and in its implications for psychotherapy At each step the author includes first the theory he is working from then the clinical implications of the theory followed by some links to the philosophical outlook inherent in the theory and finally a more extended case example It takes the view that the continuing self is partly an illusion partly a construct and that we in fact have to work to stay the same in the face of all the different possibilities the world offers us The author believes that we do this for two reasons First of all continuity allows deeper contact friendships loving relationships with partners and families Secondly and balancing this the predictable is less anxiety producing and that we avoid this existential anxiety by acting in a stereotyped way and avoiding some of the depths of contact

The Reciprocating Self Jack O. Balswick, Pamela Ebstyne King, Kevin S. Reimer, 2005-04-28 On the basis of a theologically grounded understanding of the nature of persons and the self Jack O Balswick Pamela Ebstyne King and Kevin S Reimer present a model of human development that ranges across all of life's stages infancy childhood adolescence young adulthood middle adulthood elder adulthood They do this by drawing on a biblical model of relationality where the created goal or purpose of human development is to become a reciprocating self

fully and securely related to others and to God Along the way they provide a context for understanding individual development issues concerns tensions worries or crises encountered by the self in the context of change Awareness of these issues is most pronounced at developmental transitional points learning to talk and walk beginning to eat unassisted going to school developing secondary sexual physical features leaving home obtaining full time employment becoming engaged and then married having a child for the first time parenting an adolescent watching children move away from home retiring experiencing decline in physical and mental health and finally facing imminent death Throughout Balswick King and Reimer contend that since God has created human beings for relationship to be a self in reciprocating relationships is of major importance in negotiating these developmental issues Critically engaging social science research and theory The Reciprocating Self offers an integrated approach that provides insight helpful to college and seminary students as well as those serving in the helping professions Those preparing for or currently engaged in Christian ministry will be especially rewarded by the in depth discussion of the implications for moral and faith development nurtured in the context of the life of the church

Jung's Self Psychology Polly Y. Eisendrath, James James Albert Hall, 1991-05-03 Jung was fascinated by the problem of unity in the personality If the personality is made up of multiple voices or affective imaginal states as he believed it was then how does an individual achieve a core self Jung concluded that a coherent and continuous self is the hard won achievement of consciousness the product of a mature personality in the second half of life His theory of the integration of multiple subjectivities into an individuating self anticipates current trends in constructivism and developmental psychology Jung did not systematize his own work nor attempt to make accessible many of his most complex ideas about the self This volume explores his self psychology its meaning and its application within the context of other contemporary theories of subjectivity To describe Jung's self psychology more fully in the light of contemporary theories the authors introduce twelve other self theories in a comparative analysis of the clinical case of a midlife man in psychotherapy From Kohut and Piaget to Lichtenberg and Loevinger the authors compare Jung's theories with other clinical and developmental approaches The book's final chapter offers cogent suggestions for future use of Jung's self psychology Unique in its treatment and understanding of Jung's theories this volume illuminates and simplifies many of his central ideas about the self For Jungians it provides a contemporary context in which to read and systematize his work For professionals in the larger therapeutic and educational communities it offers an up to date introduction to a provocative and imaginative body of work that is a central chapter of modern theories of subjectivity

Models of the Self Shaun Gallagher, 2013-10-22 A long history of inquiry about human nature and the self stretches from the ancient tradition of Socratic self knowledge in the context of ethical life to contemporary discussions of brain function in cognitive science It begins with a conflict among the ancients On one view which comes to be represented most clearly by Aristotle the issue is settled in terms of a composite and very complex human nature Who I am is closely tied to my embodied existence The other view found as early as the Pythagoreans and developed

in the writings of Plato Augustine and Descartes held that genuine humanness is not the result of an integration of lower functions but a purification of those functions in favour of a liberating spirituality The animal elements are excluded from the human essence The modern debate on the problem of the self although owing much to the insights of Locke and Hume can still be situated within the context of the two schools of ancient thought and this has led many to despair over the lack of apparent progress in this problem Today of course we often tend to look to science rather than philosophy to develop our understanding of a wide range of fundamental issues To what extent is the problem of the self a scientific issue Can insights from the study of neuropsychology and cognitive development in infancy provide a new perspective Can the study of schizophrenia and dissociative identity disorders tell us anything about the nature of human self consciousness Many would answer yes to the above questions but then is it not also the case that the study of exceptional self actualised human experience is equally relevant And can the phenomenological tradition dedicated to the systematic study of human experience and contemporary analytic approaches in philosophy help us out of some of the impasses that have bedevilled the empiricist tradition MODELS OF THE SELF includes all these perspectives in an attempt to cast light on one of the most intractable problems in science and the humanities The Emergent Self Adrian Van Kaam, Susan Muto, Bert Van

Croonenburg, 1985-01 **Jungian Psychotherapy and Contemporary Infant Research** Mario Jacoby, 2003-09-02 Infant research observations and hypotheses have raised serious questions about previous mainstream psychoanalytic theories of earliest childhood development In Jungian Psychotherapy and Contemporary Infant Research Mario Jacoby looks at how these observations are relevant to psychotherapeutic and Jungian analytical practice Using recent findings in infant research along with practical examples from therapeutic practice he shows how early emotional exchange processes though becoming superimposed in adult life by rational control and various defenses remain operative and become reactivated in situations of intimacy Jungian Psychotherapy and Contemporary Infant Research will be of interest to both professionals and students involved in analytical psychology and psychotherapy *Child and Adult Development* Calvin A. Colarusso, 1992-09-30

Developmental theory is the essence of any psychodynamic psychotherapy and certainly of psychoanalysis It is through an understanding of progressive life events and the way these events relate to associated biological and social events that we come to understand both psychopathology and psychological strengths For a long time we have needed a clinically oriented book that surveys normal development in both childhood and adulthood This book should be particularly helpful to all mental health professionals whose daily work requires a constant awareness and appraisal of developmental issues Dr Colarusso has integrated and summarized a tremendous amount of theoretical empirical and clinical material in a format that makes it come alive through clinical examples This book should be of great interest to all students of human behavior as well as to seasoned clinicians SHERWYN M WOODS M D PH D vii Preface Each year as I gave a lecture series on child and adult development to the adult and child psychiatric residents at the University of California at San Diego someone inevitably

would ask Is there a book that I could understand that has all of this information in it I would reply that I did not know of any single source but I could refer the person to many articles and books on development Perception, Action, and Cognition Snehlata Jaswal,2016-11-09 Even as simple a task as quenching thirst with a glass of water involves a sequence of perceptions and actions woven together by expectations and experience What are the myriad links between perception and action and what does cognition have to do with them Intuitively we think that perception precedes action but we also know that action moulds perception The reciprocal links between perception and action are now accepted almost universally The discovery of mirror neurons that encode observed actions has further emphasized the coupling of perception and action The real aim of this research topic is to go beyond identifying the evidence for perception action coupling and study the cognitive entities and processes that influence the perception action link For example the internal representations of perceived and produced events are created and modified through experience Yet the perception action link is considered relatively automatic To what extent is the perception action link affected by representations and their manipulations by cognitive processes Does selective attention modify the perception action coupling How and to what extent does the context provide sources of cognitive control The developmental trajectory of the perception action link and the influence of cognition at various stages of development could be another line of important evidence The responses to these and other such questions contribute to our understanding of this research area with significant implications for perception action coupling Self in Relationships Astri Johnsen,Rolf Sundet,Vigdis Wie Torsteinsson,2018-04-24 Inspired by Daniel Stern s work on self development the authors suggest that by combining systemic therapy with a psychoanalytical aspect family therapy can reach new depths They argue that this will enrich our understanding of the relationships between parents and children and between siblings There have been changes within psychoanalysis and family therapy which we believe can enrich both these theoretical fields The idea is not to integrate but rather to bring about a mutual curiosity in these two areas which may result in dialogues with each other and create reservoirs for ideas and practices which have been found to be useful The Self in Jungian Psychology Leslie Stein,2021-10-15 Realizing the Self is the absolute goal of Jungian psychology Yet as a concept it is impossibly vague as it defines a center of our being that also embraces the mystery of existence This work synthesizes the thousands of statements Jung made about the Self in order to bring it to ground to unravel its true purpose and to understand how it might be able to manifest **On the Lyricism of the Mind** Dana Amir,2015-12-14 On the Lyricism of the Mind Psychoanalysis and Literature explores the lyrical dimension or the lyricism of the psychic space It is not presented as an artistic disposition but rather as a universal psychic quality which enables the recovery and recuperation of the self The specific nature of human lyricism is defined as the interaction as well as the integration of two psychic modes of experience originally defined by the psychoanalyst Wilfred Bion The emergent and the continuous principles of the self Dana Amir elaborates Bion s general notion of an interaction between the emergent and the continuous principles of the self offering a

discussion of the specific function of each principle and of the significance of the various types of interaction between them as the basis for mental health or pathology The author applies these theoretical notions in her analytic work by means of literary illustrations showing how the lyrical dimension may be used to teach psychoanalytic readings of literature and explore the connection between psychoanalytic and literary languages On the Lyricism of the Mind presents a new psychoanalytic understanding of the capacity to heal to grieve to love and to know using literary illustrations but also literary language in order to extract a new formulation out of the classic psychoanalytic language of Winnicott and Bion This book will appear to a wide audience to include psychoanalysts psychotherapists and art therapists It is also extremely relevant to literary scholars including students of literary criticism philosophers of language and philosophers of mind novelists poets and to the wide educated readership in general

Slings and Arrows Jerome David Levin,1995-04-01 Levin examines what therapists can do to help the victims of narcissistic wounds to integrate mourn and heal them He shows the nature of the injuries to each party and considers ways to minimize them since treatment itself can seem an injury to both patient and therapist

Artificial Cognitive Systems David Vernon,2024-08-20 A concise introduction to a complex field bringing together recent work in cognitive science and cognitive robotics to offer a solid grounding on key issues This book offers a concise and accessible introduction to the emerging field of artificial cognitive systems Cognition both natural and artificial is about anticipating the need for action and developing the capacity to predict the outcome of those actions Drawing on artificial intelligence developmental psychology and cognitive neuroscience the field of artificial cognitive systems has as its ultimate goal the creation of computer based systems that can interact with humans and serve society in a variety of ways This primer brings together recent work in cognitive science and cognitive robotics to offer readers a solid grounding on key issues The book first develops a working definition of cognitive systems broad enough to encompass multiple views of the subject and deep enough to help in the formulation of theories and models It surveys the cognitivist emergent and hybrid paradigms of cognitive science and discusses cognitive architectures derived from them It then turns to the key issues with chapters devoted to autonomy embodiment learning and development memory and prospection knowledge and representation and social cognition Ideas are introduced in an intuitive natural order with an emphasis on the relationships among ideas and building to an overview of the field The main text is straightforward and succinct sidenotes drill deeper on specific topics and provide contextual links to further reading

Emotional Value in the Composition Classroom Ryan Crawford,2023-08-24 Using the concept of plasticity or the brain s ability to change through growth and reorganization as a theoretical framework this book argues that encouraging an exploration of the self better establishes emotional value in the composition classroom This book explores recent evidence from studies in modern neuroscience to provide biological correlations between current and developing theory and pedagogy in Composition Studies Starting with the concept of self each subsequent chapter builds a neurobiological understanding of how emotional value intrinsic motivation creativity and

happiness are constructed and felt This material exploration shows how these factors can maintain motivation improve long term memory encourage creative risk and initiate complex considerations of being Recognizing the shift in Composition Studies to posthuman and new materialist methodologies this modern neuroscience is presented as a useful parallel to rather than being at odds with these and other current methodologies theories and pedagogies Outlining the need for a more student focused guided discovery framework for the composition classroom this interdisciplinary resource will be of interest to scholars and students in the field of Composition Studies Communication Studies Education Psychology and Philosophy
