DEATH, DISEASE AND FAMINE IN PRE-INDUSTRIAL ENGLAND By Leslie Clarkson. (Pp. 183; £8.75.) Gill & Macmillan: London. 1975.

Dr Clarkson's book gives a series of images of the precariousness of health and life in pre-industrial England. He makes use of such contemporary sources as diaries, journals and medical treatises of the period. His book is easy and absorbing reading to both specialist and general readers. However, as a non-specialist, slim volume, the price of £8.75 seems exorbitant even by present-day standards.

One of the romantic myths which the book dispels is that high morbidity and mortality rates were associated with urbanization and industrialization. Pre-industrial England was, in fact, a hazardous place to inhabit and became increasingly so from the sixteenth century onwards. Food supplies became scarcer and the population increased and thus 'the poor became less well fed and more vulnerable to illness'. Fear of famine led to a decline in hospitality and, therefore, the impoverishment of those who depended on it. However, hunger was seasonal and amount of illness was related to geographical locality. For example, the Fen districts were notorious for their unsalubrious climate. There is a chilling account of Defoe's visit to the marshy districts of Essex where one man was reported to be living with his twenty-fifth wife, the previous twenty-four having all died of malaria.

Some diseases like the plague and syphilis were epidemic in nature, others like dysentery, malaria and smallpox were virtually endemic in pre-industrial England. Clarkson writes: 'Far from being a creation of nineteenth century urban society, alimentary ailments were as common as fresh air in pre-industrial England and as much a part of the country scene as ploughing and harvest.' This "army of death" was ineffectively staved off by bleeding, purging and astrology. The absence of any distinction between nervous and bodily distempers was mirrored in the practice of medicine itself which was closely interwoven with religious and magical ideas.

BETTER SERVICES FOR THE MENTALLY ILL By the Department of Health and Social Security. (Pp. 91; not illustrated; £1.35.) HMSO: London. 1975.

In the post-Rothschild era we in the United Kingdom have been led to anticipate great things from

the new marriage, or cohabitation, of science and government. If this White Paper is to be taken as a representative product of the union, however, our hopes may have been sadly misplaced. While the Department of Health and Social Security apparently remains firmly attached to the ill-defined concept of 'community care' despite the disappointments of the past 15 years, it has been confronted by a dilemma which is clearly acknowledged by the Secretary of State for Social Services in her foreword: 'The policy can only be achieved if there is substantial capital investment in new facilities and if there is a significant shift in the balance of services between health and local authority. In the present state of financial stringency we have therefore felt bound to ask ourselves whether we should issue the White Paper at all.'

Whether the decision to publish was correct must unfortunately be adjudged an open question. The document summarizes well enough the recent development and current status of the British mental health services and provides an adequately frank amount of the difficulties faced by the planners. The high expectations which have been aroused, however, will call for more than good intentions, exhortations and platitudes. On most of the key issues, e.g. the long-stay population and the primary care services, well-processed generalizations provide a poor substitute for hard-headed appraisals based on the available information and informed predictions. A White Paper should surely serve to give a clear lead to future activities as well as to identify the obstacles ahead.

EMOTIONS: THEIR PARAMETERS AND MEASUREMENT Edited by Lennart Levi. (Pp. 800; illustrated; \$25.00.) Raven Press: New York. 1975.

Emotion is one of those broad areas of inquiry which readily attract multidisciplinary interest. The process is well illustrated by the proceedings of this international symposium held in Stockholm. The material is organized into five sections: theory, biological substrates, psychophysiology, psychology and ethology, measurement and ethics. Not much new emerged, but the ground is thoroughly tilled by a number of well-known contributors, including Maclean, Parsons, Lazarus, Rahe, Eysenck, Brady and Rioch. And, as one speaker pointed out, 'The ideal drug for the industry, as far as profits are concerned, is one which can be prescribed for an ill-defined category of diseases with floating borders against the healthy state and thus likely to strike all individuals. This is where emotions come in so handy for the drug industry. The greatest explorer of this field - where much more exploration is to be

Regardless of culture most adult humans report experiencing similar feelings such as anger fear humor and joy Such subjective emotional states however are not universal Members of some cultures deny experiencing specific emotions such as fear or grief Moreover within any culture individuals differ widely in their self reports of both the variety and intensity of their emotions Some people report a vivid tapestry of positive and negative emotional experiences Other people report that a single emotion such as depression or fear totally dominates their existences Still others report flat and barren emotional lives Over the past 100 years scientists have proposed numerous rival explanations of why such large individual differences in emotions occur Various authors have offered anthropological biochemical ethological neurological psychological and sociological models of human emotions Indeed the sheer number of competing theories precludes a comprehensive review in a single volume Accordingly only a representative sample of models are discussed in this book and many equally important theories have been omitted These omissions were not intended to prejudice the reader in favor of any particular conceptual framework Rather this selective coverage was intended to focus attention upon the empirical findings that contemporary theories attempt to explain *Emotions and Bodily Responses* James L McGaugh,2013-10-22
