The Personal Distribution of Income in an International Perspective Richard Hauser, Irene Becker, 2012-12-06 Irene Becker and Richard Hauser *Bringing Income Distribution in From The Cold* was the title Anthony B Atkinson gave his Presidential Address to the Royal Economic Society in 1996 This provocative formulation was intended to draw attention to the way in which the subject of income distribution long has been marginalised in the field of economics Atkinson 1997 In recent years however scientific interest in matters of personal income distribution has been growing One reason for this recent concern stems from the political sphere The factors of reinforced competition between countries due to the globalisation of markets and European integration high unemployment rates and demographic changes necessitate reforms of labour markets tax systems and social security systems These reforms will affect both allocation and distribution so that reliable information on both areas is needed to devise balanced political programs Another reason for the burgeoning literature on personal income distribution is the improved availability of data on individual income which are a major

prerequisite for detailed analyses of distribution topics Last but not least the development of powerful computers advanced statistics econometric packages and extended micro simulation models enables researchers both to work with huge individual data sets to describe and explain the personal distribution of income and to simulate the effects of political social and economic programs The volume at hand is based on some of the research advances in this field during the last decade

Income Mobility and Welfare Mr.Tom Krebs,Mr.Pravin Krishna,Mr.William Maloney,2013-01-28 This paper develops a framework for the quantitative analysis of individual income dynamics mobility and welfare Individual income is assumed to follow a stochastic process with two unobserved components an i i d component representing measurement error or transitory income shocks and an AR 1 component representing persistent changes in income We use a tractable consumption saving model with labor income risk and incomplete markets to relate income dynamics to consumption and welfare and derive analytical expressions for income mobility and welfare as a function of the various parameters of the underlying income process The empirical application of our framework using data on individual incomes from Mexico provides striking results Much of measured income mobility is driven by measurement error or transitory income shocks and therefore almost welfare neutral A smaller part of measured income mobility is due to either welfare reducing income risk or welfare enhancing catching up of low income individuals with high income individuals both of which have economically significant effects on social welfare Decomposing mobility into its fundamental components is thus seen to be crucial from the standpoint of welfare evaluation

Economics Letters, 2001. *Institutions, Partisanship and Credibility in Global Financial Markets*. Hye Jee Cho, 2017-07-28. Increasingly integrated global financial markets have been shaken by a series of severe shocks in recent decades from Mexico's Tequila crisis to the upheavals in the Eurozone. These crises have demonstrated that signs of uncertain local economic and political conditions can result in market fluctuations which in turn cause economic social and political instability. Such instability is particularly severe for developing countries that rely heavily on international financial markets for their financial needs. Building credibility in these markets is therefore important for national governments who wish to prevent market panic and capital flight and ultimately to achieve stable economic growth. Earlier studies have argued that institutional arrangements that constrain governments and commit them to protecting private property rights and market friendly policies can send a strong positive signal to the markets about a given country's sovereign credibility. This book argues, however, that the market perception of such credibility building institutions is significantly contingent on which party governs the country. Formal institutions confer significant credibility building effects on left wing governments whereas less or no significant effects are enjoyed by right wing governments. And beyond that, any significant changes in a country's institutional landscape such as a breakdown of democracy or joining an international organization that can influence domestic politics have particularly strong impact on the credibility of left wing governments. This argument is supported by a quantitative analysis of sovereign credit ratings data collected from around 90 developing countries from 1980 to 2007 by case studies from South Asia, Eastern Europe and Latin America and by face to face interviews with 24 financial market experts based in Hong Kong, Seoul and Paris. **Proceedings of the ... Annual Conference on Taxation Held Under the Auspices of the National Tax Association-Tax Institute of America**. National Tax Association-Tax Institute of America, 1996.
