Empirical Studies Of Programmers Humancomputer Interaction Series Vol I:

Human-Centered Software Engineering Ahmed Seffah, Jean Vanderdonckt, Michel C. Desmarais, 2009-06-19 Activity theory is a way of describing and characterizing the structure of human activity of all kinds First introduced by Russian psychologists Rubinshtein Leontiev and Vigotsky in the early part of the last century activity theory has more recently gained increasing attention among interaction designers and others in the human computer interaction and usability communities see for example Gay and H Brooke 2004 Interest was given a significant boost when Donald Norman suggested activity theory and activity centered design as antidotes to some of the putative ills of human centered design Norman 2005 Norman who has been credited with coining the phrase user centered design suggested that too much attention focused on human users may be harmful that to design better tools designers need to focus not so much on users as on the activities in which users are engaged and the tasks they seek to perform within those activities Although many researchers and practitioners claim to have used or been influenced by activity theory in their work see for example Nardi 1996 it is often difficult to trace precisely where or how the results have actually been shaped by activity theory In many cases even detailed case studies report results that seem only distantly related if at all to the use of activity theory Contributing to the lack of precise and traceable impact is that activity theory spite its name is not truly a formal and proper theory *Guide to Advanced Empirical Software Engineering* Forrest Shull, Janice Singer, Dag I. K. Sjøberg, 2007-11-21 Empirical studies have become an important part of software engineering research and practice Ten years ago it was rare to see a conference or journal article about a software development tool or process that had empirical data to back up the claims Today in contrast it is becoming more and more common that software engineering conferences and journals are not only publishing but eliciting articles that describe a study or evaluation Moreover a very successful conference International Symposium on Empirical Software Engineering and Measurement journal Empirical Software Engineering and organization International Software Engineering Research Network have all evolved in the last 10 years that focus solely on this area As a further illustration of the growth of empirical software engineering a search in the articles of 10 software engineering journals showed that the proportion of articles that used the term empirical software engineering doubled from about 6% in 1997 to about 12% in 2006 While empirical software engineering has seen such substantial growth there is not yet a reference book that describes advanced techniques for running studies and their application This book aims to fill that gap The chapters are written by some of the top international empirical software engineering researchers and focus on the practical knowledge necessary for conducting reporting and using empirical methods in software engineering The book is intended to serve as a standard reference Books in Series, 1876-1949 R.R. Bowker Company, 1982 **The Virtual Classroom** Starr Roxanne Hiltz, 1994 *Empirical Studies of Programmers* Elliot Soloway, Sundararaja S. Iyengar, 1986 This volume studies programmers to gain insights to facilitate improved productivity and quality software The chapters cover a range of topics

including cognitive models of programming measuring program complexity the effects of program style and structure on program comprehension production and maintenance documentation the effects of control structures and data structures on program comprehension production and maintenance evaluations of program design and construction methodologies teaching strategies and assessment of programmer abilities *The Cognitive Artifacts of Designing* Willemien

Visser,2006-08-08 In this dynamic review and synthesis of empirical research and theoretical discussion of design as cognitive activity Willemien Visser reconciles and integrates the classical view of design as conceptualized by Herbert Simon's symbolic information processing approach with modern views of design such as the situativity approach as formulated by Donald Schon The author goes on to develop her own view on design in which design is most appropriately characterized as a construction of representations She lays the groundwork for the integration of design research and cognitive science This seemingly simple framework has implications that set the stage for this mutually beneficial integration **Agile Processes**

in Software Engineering and Extreme Programming Claes Wohlin,2012-05-12 This book contains the refereed proceedings of the 13th International Conference on Agile Software Development XP 2012 held in Malm Sweden in May 2012 In the last decade we have seen agile and lean software development strongly influence the way software is developed Agile and lean software development has moved from being a way of working for a number of pioneers to becoming more or less the expected way of developing software in industry The topics covered by the selected full papers include general aspects of agility agile teams studies related to the release and maintenance of software and research on specific practices in agile and lean software development They are complemented by four short papers capturing additional aspects of agile and lean projects Human-Computer Interaction Andrew Sears,Julie A. Jacko,2009-03-02 Hailed on first publication as a

compendium of foundational principles and cutting edge research The Human Computer Interaction Handbook has become the gold standard reference in this field Derived from select chapters of this groundbreaking resource Human Computer Interaction The Development Practice addresses requirements specification design **Human-computer Interface Design Guidelines** C. Marlin Brown,1988 This volume contains guidelines to aid software designers in developing user oriented human computer interfaces The procedures formats and wording with which a computer system communicates with its users have an impact on ease of learning and ease of use of that system It presents suggestions drawn from diverse sources

Informatics Curricula and Teaching Methods Lillian Cassel,R. Reis,2013-04-17 Several aspects of informatics curricula and teaching methods at the university level are reported in this volume including Challenges in defining an international curriculum The diversity in informatics curricula Computing programs for scientists and engineers Patterns of curriculum design Student interaction Teaching of programming Peer review in education This book contains a selection of the papers presented at the Working Conference on Informatics Curricula Teaching Methods and Best Practice ICTEM 2002

which was sponsored by the International Federation for Information Processing IFIP Working Group 3.2 and held in Florianópolis, Brazil, in July 2002. The working groups were organized in three parallel tracks. Working Group 1 discussed the Directions and Challenges in Informatics Education. The focus of Working Group 2 was Teaching Programming and Problem Solving. Working Group 3 discussed Computing: The Shape of an Evolving Discipline.

Intelligent Multimedia Multi-Agent Systems Rajiv Khosla, Ishwar K. Sethi, Ernesto Damiani, 2013-03-09. Intelligent Multimedia Multi-Agent Systems focuses on building intelligent successful systems. The book adopts a human-centered approach and considers various pragmatic issues and problems in areas like intelligent systems, software engineering, multimedia databases, electronic commerce, data mining, enterprise modeling, and human-computer interaction for developing a human-centered virtual machine. The authors describe an ontology of the human-centered virtual machine which includes four components: activity-centered analysis component, problem-solving adapter component, transformation agent component, and multimedia-based interpretation component. These four components capture the external and internal planes of the system development spectrum. They integrate the physical, social, and organizational reality on the external plane with stakeholder goals, tasks, and incentives, and organization culture on the internal plane. The human-centered virtual machine and its four components are used for developing intelligent multimedia multi-agent systems in areas like medical decision support and health informatics, medical image retrieval, e-commerce, face detection and annotation, internet games, and sales recruitment. The applications in these areas help to expound various aspects of the human-centered virtual machine, including human-centered domain modeling, distributed intelligence and communication, perceptual and cognitive task modeling, component-based software development, and multimedia-based data modeling. Further, the applications described in the book employ various intelligent technologies like neural networks, fuzzy logic, and knowledge-based systems, software engineering artifacts like agents and objects, internet technologies like XML, and multimedia artifacts like image, audio, video, and text.

Artificial Intelligence and Tutoring Systems Etienne Wenger, 2014-05-12. Artificial Intelligence and Tutoring Systems: Computational and Cognitive Approaches to the Communication of Knowledge focuses on the cognitive approaches, methodologies, principles, and concepts involved in the communication of knowledge. The publication first elaborates on knowledge communication systems, basic issues, and tutorial dialogues. Concerns cover natural reasoning and tutorial dialogues, shift from local strategies to multiple mental models, domain knowledge, pedagogical knowledge, implicit versus explicit encoding of knowledge, knowledge communication, and practical and theoretical implications. The text then examines interactive simulations, existing CAI traditions, and learning environments. The manuscript elaborates on knowledge communication, didactics, and diagnosis. Topics include knowledge presentation and communication, pedagogical contexts, target levels of didactic operations, behavioral and epistemic diagnosis, and aspects of diagnostic experience. The publication is a dependable reference for researchers interested in the computational and cognitive approaches to the communication of knowledge.

Cognition Beyond the Brain Stephen J Cowley, Frédéric Vallée-Tourangeau, 2013-06-13 Cognition Beyond the Brain challenges neurocentrism by advocating a systemic view of cognition based on investigating how action shapes the experience of thinking The systemic view steers between extended functionalism and enactivism by stressing how living beings connect bodies technologies language and culture Since human thinking depends on a cultural ecology people connect biologically based powers with extended systems and by so doing they constitute cognitive systems that reach across the skin Biological interpretation exploits extended functional systems Illustrating distributed cognition one set of chapters focus on computer mediated trust work at a construction site judgement aggregation and crime scene investigation Turning to how bodies manufacture skills the remaining chapters focus on interactivity or sense saturated coordination The feeling of doing is crucial to solving maths problems learning about X rays finding an invoice number or launching a warhead in a film People both participate in extended systems and exert individual responsibility Brains manufacture a now to which selves are anchored people can act automatically or at times vary habits and choose to author actions In ontogenesis a systemic view permits rationality to be seen as gaining mastery over world side resources Much evidence and argument thus speaks for reconnecting the study of computation interactivity and human artifice Taken together this can drive a networks revolution that gives due cognitive importance to the perceivable world that lies beyond the brain Cognition Beyond the Brain is a valuable reference for researchers practitioners and graduate students within the fields of Computer Science Psychology Linguistics and Cognitive Science

Human-Computer Interaction - INTERACT '87 H.-J. Bullinger, B. Shackel, 2014-05-21 Since the first INTERACT Conference in September 1984 the field of Human Computer Interaction has received increasing attention from researchers and industrial practitioners the importance of the topic now being widely recognized Technological developments have made it possible to seek new solutions to the problem of supporting work processes by information technology and for designing the interface between user and the machine Computers have become an everyday and common tool in the work of many people This has motivated the development of an interdisciplinary field of research which now appears much more established than it was a few years ago The INTERACT forums provide the opportunity for regular presentation and discussion of new results from research and application by bringing together the various disciplines and research approaches on a worldwide basis
