Toni, Rashad Sawires, 2025-06-03 This volume is considered as a unique book outlining new advances in seismotectonic
research of the East Mediterranean Red Sea Region EMRSR The dedicated chapters will outline the region in terms of
tectonic segmentation kinematics and possible causes of it It will provide state of art overview along strike variations in
geometry and behavior of faulting jog characteristics of the active tectonic zones analysis of earthquake clustering features
crustal deformation constraining crustal velocity fields relationship between strain rate and seismicity paleoseismology as
well as global and regional seismicity There will be specific topics within the book dedicated to the probabilistic seismic
hazard assessment of the EMRSR including its crustal stress field evolution and its implications for fault mechanics
earthquake source parameters and moment tensors and description of double coupled earthquake focal mechanism Also
earthquake induced deformational structures focusing on afterslip and spontaneous aseismic slip processes will provide a
complete picture for the reader about this fascinating active region Sections documenting the stress field variations and
kinematics for diffuse microseismicity will also be developed Other cutting edge research such as progressive failure
spatiotemporal characteristics of seismicity that depends on accurate earthquake locations as well as relationship of global
distribution to earthquake source geometry and tectonic origin provides up to date information within the EMRSR realm The
significance of the ambient noise level and site characterization specific to EMRSR and congruence and incongruence of
active tectonic zones with normal plate kinematics will be shown in illustrative sections of this new book The book also will
explore the potential relationship of seismotectonics to sustainable development as a key societal aspect of seismotectonic

research in an active convergent plate margin region such as the EMRSR
