In The Field Readings On The Field Research Experience:

In the Field Carolyn D. Smith, William Kornblum, 1989 This volume brings together personal accounts by a group of noted ethnographic researchers An ideal supplemental text for methods courses In the Field is designed to give students a sense of what it is actually like to conduct ethnographic research especially participant observation As the selections show field researchers often become deeply involved in the lives of the people they study and are at times forced into a reexamination of their own values By learning how social scientists conduct research under field conditions and how they feel while they are doing it students will be better prepared to carry out successful field research projects of their own Divided into four parts the book begins with several readings that explore the confusing and frustrating period every field researcher goes through while trying to gain the acceptance of the people under study In the second section Building Relationships the contributors show how ethnographic researchers often develop subtle complex relationships with their informants These selections also illustrate the impact of differences in race gender and class between the researcher and his or her subject The next group of readings deal with a problem often encountered in the field How can ethnographic researchers maintain objectivity in the face of deepening involvement in their subjects lives In the final section the researchers ask some searching questions about the role of the observer Taken together these readings offer a new window onto the field research experience that will be invaluable not only for those just beginning their careers but also for professional researchers who seek inspiration and encouragement from others with similar experiences

The Researcher Experience in Qualitative Research Susan Diemert Moch, Marie F. Gates, 2000 One of the most prominent currents felt in the arena of qualitative research methods is the impulse toward reflexivity and self analysis researchers considering their own place in the research act The goals of this book are to describe various researcher experiences and give novice researchers some insight to better choose research settings deal with their own personal issues in the research act and to report their research accurately The first part of the book will consider various populations and settings for qualitative research with a special emphasis on health care related settings Part Two will discuss how one processes the researcher experience both in terms of tools that can be used networking focused discussions qualitative writing etc as well as issues pertaining to processing cross cultural and gender issues etc It then offers some insight into ways of processing the researcher experience in teams Finally in part three the author turn to ways of reporting the researcher experience both in terms of possible setting journal articles chapters the Internet as well as modes and issues first person narratives ethical considerations

Uncharted Terrains Anna Ochoa O'Leary, Colin M. Deeds, Scott Whiteford, 2013-11-28 We must secure our borders has become an increasingly common refrain in the United States since 2001 Most of the securing has focused on the US Mexico border In the process immigrants have become stigmatized if not

criminalized This has had significant implications for social scientists who study the lives and needs of immigrants as well as the effectiveness of programs and policies designed to help them In this groundbreaking book researchers describe their experiences in conducting field research along the southern US border and draw larger conclusions about the challenges of contemporary border research Each chapter raises methodological and ethical questions relevant to conducting research in transnational contexts which can frequently be unpredictable or even volatile The volume addresses the central question of how can scholars work with vulnerable migrant populations along the perilous US Mexico border and maintain ethical and methodological standards while also providing useful knowledge to stakeholders Not only may immigrants be afraid to provide information that could be incriminating but researchers may also be reluctant to allow their findings to become the basis of harsher law enforcement unjustly penalize the subjects of their research and inhibit the formulation of humane and effective immigration policy based on scholarly research All of these concerns which are perfectly legitimate from the social scientists point of view can put researchers into conflict with legal authorities Contributors acknowledge their quandaries and explain how they have dealt with them They use specific topics reproductive health issues and sexually transmitted diseases among immigrant women a study of undocumented business owners and the administration of the Mexican Household Survey in Phoenix among others to outline research methodology that will be useful for generations of border researchers

Invisible Contrarian Regna Darnell, **The Interloper** Michel Anteby, 2024-04-09 A stranger enters your world and starts asking questions you would prefer not to answer What do you do Mostly when an interloper appears communities find ways to resist they obstruct investigations and hide evidence shelve complaints and silence dissent even forget their own past and deny having done so Such resistance that is the social mechanisms deployed by social groups to maintain the status quo is the bane of field researchers everywhere for it often seems to slam the door in their face How can one learn about a community when they resist so very strongly The answer is that sometimes the resistance is itself the key By closing ranks and creating obstacles community members often disclose more than they meant This book shows how such resistance manifests itself how researchers can respond to it and most importantly what it all reveals To do so The Interloper draws insights from diverse stories of resistance and research inquiries everything from Nazi rocket scientists to Disney union busters Harvard professors to those securing cadavers for medical school dissection to draw attention to field resistance and help analyze it Offering a window into such research for readers of many disciplines this book ultimately is intended both as a practical and theoretical guide for field researchers All these stories and more reveal a common truth When any field

researcher tries to gain access to a field they are sure to meet resistance to their investigations The Interloper brings together all these instances of resistance that he encountered or witnessed alongside accounts from other published work The book organizes them around ideal forms of resistance and details their unique implications Ultimately The Interloper argues that such resistance contains way more analytical possibilities than most interlopers including field researchers envision
