Indices And Identity:

Indices and Identity Robert Fiengo, Robert May, 1994 Under what conditions are expressions of a language the same when are they different Indices and identity focuses on this question in the context of the theory of anaphora and on the role of indices in characterizing syntactic and semantic identity of expressions Fiengo and May develop two main themes within the theory of anaphora The first pertains to the meaning of coindexing and non coindexing the correspondence between indexical relations among expressions and the valuation relation that holds among them while the second is the development of Dependency Theory the theory of the relations of occurrences of indices The novelty of Fiengo and May's approach lies with their characterization of indexical dependencies and the conditions under which structures manifest the same or different dependency In particular Indices and identity emphasizes issues raised by strict and sloppy identity in ellipsis exploring what Fiengo and May call the eliminative puzzles of ellipsis The significance of these puzzles is that they show the shortcomings of current theories of anaphora in ellipsis while illustrating an application of Dependency Theory to complex cases of strict and sloppy identity Elliptical contexts in turn lead to consideration of the embedding of the formal syntactic notions of identity arising from indices and dependencies within more general notions of structural identity This relates to a consideration of the foundations of reconstruction which the authors argue is syntactic identity up to indexical identity and vehicle change variation in the syntactic form of expression of arguments The book concludes with a discussion of the relation of reconstruction logical representation in grammar and the application of grammatical constraints The discussion focuses on antecedent contained deletion and stands independently as a comprehensive study of this construction **The**

Poetics of National and Racial Identity in Nineteenth-Century American Literature John D. Kerkerling, 2003-12-11

John D Kerkerling's study examines the literary history of racial and national identity in nineteenth century America Kerkerling argues that writers such as DuBois Lanier Simms and Scott used poetic effects to assert the distinctiveness of certain groups in a diffuse social landscape Kerkerling explores poetry's formal properties its sound effects as they intersect with the issues of race and nation He shows how formal effects ranging from meter and rhythm to alliteration and melody provide these writers with evidence of a collective identity whether national or racial Through this shared reliance on formal literary effects national and racial identities Kerkerling shows are related elements of a single literary history This is the story of how poetic effects helped to define national identities in Anglo America as a step toward helping to define racial identities within the United States This highly original study will command a wide audience of Americanists Linear groups Leonard Eugene Dickson, 1901 *Analysing Identity* Peter Weinreich, Wendy Saunderson, 2005-12-08 People's identities are addressed and brought into being by interaction with others Identity processes encompass biographical experiences historical eras and cultural norms in which the self's autonomy varies according to the flux of power relationships with others Identity Structure Analysis ISA draws upon psychological sociological and social anthropological theory and evidence to

formulate a system of concepts that help explain the notion of identity They can be applied to the practical investigations of identity structure and identity development in a number of clinical societal and cultural settings This book includes topics on national and ethnic identification in multicultural contexts and gender identity relating to social context and the urban environment Clinical applications that describe identity processes associated with psychological distress are also examined These include anorexia nervosa and vicarious traumatising of counsellors in the aftermath of atrocity Analysing Identity is unique in its development of this integrative conceptualisation of self and identity and its operationalisation in practice This innovative book will appeal to academics and professionals in developmental social cross cultural clinical and educational psychology and psychotherapy It will also be of interest to those involved with sociology political science gender studies ethnic studies and social policy Of particular note is the availability of new software Ipseus which facilitates ISA for use by practitioners It enables them to enhance their professional skills by ascertaining their clients perspectives on self as located in the social world This has been successfully used with pre school three to five year old children and all other age ranges through childhood adolescence and adulthood Ipseus is designed to be used in inter cultural contexts and appeals to practitioners for their input for the generation of customized identity instruments see www.identityexploration.com

Border Crossing in Greater China Jenn-hwan Wang, 2014-07-25 China's transformation from a poor and underdeveloped country into a global market power has profoundly altered its socioeconomic power relations with the other countries in the Greater China region namely Taiwan and Hong Kong Indeed this economic shift has resulted in the massive flow of capital and people from Taiwan as well as Hong Kong to China to seek business opportunities and new lifestyles These flows have in turn completely transformed longstanding borderlines in the region This book examines the transformation of Taiwan and Hong Kong's socioeconomic relationships with China as their economies have become more deeply integrated into Greater China

Across three key sections it explores the impact of increasing social interaction and the shrinking of existing borderlines to ask whether these changes will bring about a convergence of identity among the people involved Production examines how investments from Taiwan and Hong Kong to China have transformed production networks Community explores the impact of cross boundary mobility and the integration of migrants into Chinese communities and finally Identity engages with what is one of the most important issues in contemporary Taiwanese society Border Crossing in Greater China contributes not only to theoretical debates on border crossing issues but also provides valuable insights on the practical concerns regarding social and political integration and tensions in the region As such it will be of great interest to students and scholars of Taiwan studies Chinese studies Chinese society and Chinese economics

Poincaré Plot Methods for Heart Rate Variability Analysis Ahsan Habib Khandoker, Chandan Karmakar, Michael Brennan, Marimuthu Palaniswami, Andreas Voss, 2013-08-15 The Poincaré plot named after Henri Poincaré is a popular two dimensional visualization tool for dynamic systems due to its intuitive display of the dynamic properties of a system from a time series This book presents the basis of Poincaré plot and focus especially on traditional and new methods for analysing the geometry temporal and spatial dynamics disclosed by the Poincaré plot to evaluate heart rate variability HRV Mathematical descriptors of Poincaré plot have been developed to quantify the autonomic nervous system activity sympathetic and parasympathetic modulation of heart rate Poincaré plot analysis has also been used in various clinical diagnostic settings like diabetes chronic heart failure chronic renal failure and sleep apnea syndrome The primary aims of quantification of the Poincaré plots are to discriminate healthy physiological systems from pathological conditions and to classify the stage of a disease The HRV analysis by Poincaré plot has opened up ample opportunities for important clinical and research applications Therefore the present book can be used either for self study as a supplement to courses in linear and nonlinear systems or as a modern monograph by researchers in this field of HRV analysis

Reflecting the Mind Eros Corazza, 2004-09-30 This volume presents a fascinating investigation of the role that indexicals play in our thought Indexicality is crucial to the understanding of such puzzling issues as the nature of the self the nature of perception social interaction psychological pathologies and psychological development

Cognitive Interfaces Emile van der Zee, Urpo Nikanne, 2001-02-01 This book brings new perspectives to bear on the the architecture of the mind and the relationship between language and cognition It considers how information is linked in the mind between different cognitive and expressive levels so that people can for example talk about what they see and act upon what they hear and how these linkages are and need to be constrained The book is concerned in particular with the perception and representation of spatial structure In the opening chapter the editors address the general issues underlying current research and set each chapter in context The book is then divided into four parts The first two discuss the properties of the conceptual to syntactic structure interface and the conceptual to spatial structure interface Part three examines constraints on the lexical interface and the different kinds of cognitive information in word representations Part four considers how the neural architecture of the brain

constrains mapping relations between different kinds of cognitive information The authors are psychologists and linguists They show the insights that can be gained from the joint deployment of theoretical linguistic and experimental psychological research and the value of a multi disciplinary approach to the study of mind brain and language **Price Index Numbers** Naohito Abe,2025-03-14 This textbook offers a comprehensive yet concise introduction to the theory behind price indices covering the basics historical background necessary mathematical foundations and contemporary cutting edge theories For those looking to study price indices the most commonly used resources have traditionally been the comprehensive but voluminous CPI Manual which is aimed at statistical practitioners or Balk 2008 which while covering theory concisely requires advanced mathematical skills This book is distinctive in that it 1 places emphasis on the relationship between price indices and economic theory 2 presents cutting edge methods and topics such as multilateral indices using scanner data and price measurement using Engel curves and 3 provides explanations of essential mathematical techniques like functional equations thus enabling self study from the fundamentals to the forefront of modern index number theory *The Decomposition of Global Conformal Invariants* Spyros Alexakis,2012-05-06 To mark the continued success of the series all hook s are again available in paperback For a complete list of titles please visit the Princeton University Press Web site www.press.princeton.edu The most recently published volumes include Book jacket *A Theory of Action Identification* Robin R. Vallacher,Daniel M. Wegner,2014-04-04 First published in 1985 A person may be caught in the midst of a patently ridiculous act interrupted in a moment of apparent confusion or even aroused from sleep and yet respond to a query of What are you doing with remarkable ease The answer that is given is an identification of action It is the central idea of this book that such action identifications perform pivotal functions in a broad range of psychological and social processes *Your GPS for outstanding leadership , Identity and Indiscernibility in Quantum Mechanics* Tomasz Bigaj,2022-01-03 This book analyzes metaphysical consequences of the quantum theory of many particles with respect to the fundamental notions of identity individuality and discernibility The main focus is on the proper interpretation of the quantum formalism in relation to the role of permutation invariance and the adequate representation of the properties of individual subsystems Two main approaches to the issue of the individuation of quantum particles are distinguished and thoroughly discussed These approaches differ radically with respect to their metaphysical consequences while one of them implies the complete indiscernibility of quantum particles of the same kind the other one restores the possibility of discerning individual particles by their properties We connect the problem of quantum individuation and discernibility with an analysis of the concept of quantum entanglement and we also discuss identity over time and in counterfactual scenarios *Identity and Intercultural Communication* Nicoleta Corbu,Dana Popescu-Jourdy,Tudor Vlad,2014-10-21 The search for identity is a continuous challenge in the global world from personal identity to social national European or professional identities each person experiences nowadays a multi dimensional self representation Placing the topic against an intercultural background with a focus on communication this

book addresses the complicated relationship between self identity and society from an academic perspective The authors of the chapters in this book offer a complex landscape of professional and scholar approaches and research in various parts of the world including Canada China Estonia France Greece Israel Romania and the United States of America Quark-Gluon Plasma: Theoretical Foundations J. Kapusta, B. Müller, J. Rafelski, 2003-11-25 The purpose of this volume is to trace the development of the theoretical understanding of quark gluon plasma both in terms of the equation of state and thermal correlation functions and in terms of its manifestation in high energy nuclear collisions Who among us has not wondered how tall a mountain is on a neutron star what happens when matter is heated and compressed to higher and higher densities what happens when an object falls into a black hole or what happened eons ago in the early universe The study of quark gluon plasma is related in one way or another to these and other thought provoking questions Oftentimes the most eloquent exposition is given in the original papers To this end a selection is made of what are the most important pioneering papers in this field The early 1950s was an era when high energy multiparticle production in cosmic ray interactions attracted the attention of some of the brightest minds in physics and so it should be no surprise that the first reprinted papers deal with the introduction of statistical models of particle production The quark model arose in the 1960s while QCD as such was recognized as the theory of the strong interactions in the 1970 s The behavior of matter at high temperatures and supranuclear densities became of wide interest in the nuclear and particle physics communities starting in the 1970s which is when the concept of quark gluon plasma became established The history of the field has been traced up to the early 1990s There are three reasons for stopping at that point in time First most of the key theoretical concepts and formalisms arose before 1993 although many of them continue to be developed today and hopefully well into the future Second papers written after 1992 are much more readily available than those written before due to the advent of the World Wide Web and its electronic preprint databases and journals Finally in making this collection of reprints available as hardcopy one is limited in the number of pages and some papers in the present selection should have been deleted in order to make room for post 1993 papers For the same reason the subject focus must of necessity be limited which means that in this reprint collection two wide subject areas are not addressed the behavior of nuclear matter under extreme conditions is not reported nor is quark matter in neutron stars The broad categories into which the material has been placed reflect the diverse studies of quark gluon plasma and its manifestation They are phase space models of particle production perturbative QCD plasma lattice gauge theory fluid dynamics and flow strangeness heavy flavor charm electromagnetic signals parton cascade and minijets parton energy loss and jet quenching Hanbury Brown Twiss HBT interferometry disoriented chiral condensates phase transition dynamics and cosmology and color superconductivity Each chapter is prefaced by an introduction which contains a list of significant papers which is more complete than the reprinted papers though by no means exhaustive It also contains citations to most relevant papers published up to the date of completion of this volume fall 2002 It is hoped that the short

reviews will help bring the reader up to date on the latest developments The selection of papers cited in each chapter and in particular the ones selected for reprinting is solely the responsibility of the Editors It is based on their best judgement and experience in this field dating back to the mid 1970s In order to be reprinted a paper must have been pioneering in the sense of originality and impact on the field Generally they have been cited over a hundred times by other papers published in refereed journals The final selection was reviewed and discussed among the Editors repeatedly Just because a paper is not included does not mean they do not know of it or do not have a high regard for it All of the papers cited or reprinted are original research contributions There are three other types of publications listed The first is a compilation of books The second is a list of reviews many of which contain a significant amount of original material The third is a list of the proceedings of the series of Quark Matter meetings the primary series of international conferences in this field that is attended by both theorists and experimentalists

Language and Identity across Modes of Communication Dwi Noverini Djenar,Ahmar Mahboob,Ken Cruickshank,2015-03-10 This edited collection examines how people use a range of different modalities to negotiate influence and or project their own or other people s identities It brings together linguistic scholars concerned with issues of identity through a study of language use in various types of written texts conversation performance and interviews
