Indirect Estimators In Us Federal Programs:

Indirect Estimators in U.S. Federal Programs Wesley L. Schaible, 2013-11-11 In 1991 a subcommittee of the Federal Committee on Statistical Methodology met to document the use of indirect estimators that is estimators which use data drawn from a domain or time different from the domain or time for which an estimate is required This volume comprises the eight reports which describe the use of indirect estimators and they are based on case studies from a variety of federal programs As a result many researchers will find this book provides a valuable survey of how indirect estimators are used in practice and which addresses some of the pitfalls of these methods **Indirect Estimators in U. S. Federal Programs** Wesley L. Schaible, 2014-01-15 *Substance Abuse in States and Metropolitan Areas*, 1996 **Handbook of Statistics_29B: Sample Surveys: Inference and Analysis**, 2000 **Sample Surveys: Inference and Analysis**, 2009-09-02 Handbook of Statistics_29B contains the most comprehensive account of sample surveys theory and practice to date It is a second volume on sample surveys with the goal of updating and extending the sampling volume published as volume 6 of the Handbook of Statistics in 1988 The present handbook is divided into two volumes 29A and 29B with a total of 41 chapters covering current developments in almost every aspect of sample surveys with references to important contributions and available software It can serve as a self contained guide to researchers and practitioners with appropriate balance between theory and real life applications Each of the two volumes is divided into three parts with each part preceded by an introduction summarizing the main developments in the areas covered in that part Volume 1 deals with methods of sample selection and data processing with the later including editing and imputation handling of outliers and measurement errors and methods of disclosure control The volume contains also a large variety of applications in specialized areas such as household and business surveys marketing research opinion polls and censuses Volume 2 is concerned with inference distinguishing between design based and model based methods and focusing on specific problems such as small area estimation analysis of longitudinal data categorical data analysis and inference on distribution functions The volume contains also chapters dealing with case control studies asymptotic properties of estimators and decision theoretic aspects Comprehensive account of recent developments in sample survey theory and practice Covers a wide variety of diverse applications Comprehensive bibliography *Small Area Estimation* J. N. K. Rao, Isabel Molina, 2015-08-24 Praise for the First Edition This pioneering work in which Rao provides a comprehensive and up to date treatment of small area estimation will become a classic I believe that it has the potential to turn small area estimation into a larger area of importance to both researchers and practitioners Journal of the American Statistical Association Written by two experts in the field Small Area Estimation Second Edition provides a comprehensive and up to date account of the methods and theory of small area estimation SAE particularly indirect estimation based on explicit small area linking models The model based approach to small area estimation offers several advantages including increased precision the derivation of optimal estimates and

associated measures of variability under an assumed model and the validation of models from the sample data Emphasizing real data throughout the Second Edition maintains a self contained account of crucial theoretical and methodological developments in the field of SAE The new edition provides extensive accounts of new and updated research which often involves complex theory to handle model misspecifications and other complexities Including information on survey design issues and traditional methods employing indirect estimates based on implicit linking models Small Area Estimation Second Edition also features Additional sections describing the use of R code data sets for readers to use when replicating applications Numerous examples of SAE applications throughout each chapter including recent applications in U S Federal programs New topical coverage on extended design issues synthetic estimation further refinements and solutions to the Fay Herriot area level model basic unit level models and spatial and time series models A discussion of the advantages and limitations of various SAE methods for model selection from data as well as comparisons of estimates derived from models to reliable values obtained from external sources such as previous census or administrative data Small Area Estimation Second Edition is an excellent reference for practicing statisticians and survey methodologists as well as practitioners interested in learning SAE methods The Second Edition is also an ideal textbook for graduate level courses in SAE and reliable small area statistics

National Research Council, Division of Behavioral and Social Sciences and Education, Commission on Behavioral and Social Sciences and Education, Panel on Estimates of Poverty for Small Geographic Areas, 1997-07-27 The Panel on Estimates of Poverty for Small Geographic Areas was established by the Committee on National Statistics at the National Research Council in response to the Improving America's Schools Act of 1994 That act charged the U S Census Bureau to produce updated estimates of poor school age children every two years for the nation's more than 3 000 counties and 14 000 school districts The act also charged the panel with determining the appropriateness and reliability of the Bureau's estimates for use in the allocation of more than 7 billion of Title I funds each year for educationally disadvantaged children The panel's charge was both a major one and one with immovable deadlines The panel had to evaluate the Census Bureau's work on a very tight schedule in order to meet legal requirements for allocation of Title I funds As it turned out the panel produced three interim reports the first one evaluated county level estimates of poor school age children in 1993 the second one assessed a revised set of 1993 county estimates and the third one covered both county and school district level estimates of poor school age children in 1995 This volume combines and updates these three reports into a single reference volume

Missing Data and Small-Area Estimation Nicholas T. Longford, 2005-08-05 This book evolved from lectures courses and workshops on missing data and small area estimation that I presented during my tenure as the first Copley Fellow 2000-2002 For the Fellowship I proposed these two topics as areas in which the academic statistics could contribute to the development of government statistics in exchange for access to the operational details and background that would inform the direction and sharpen the focus of academic research After a few years of involvement I have come to realise that the separation of academic and industrial statistics is not well suited to either party and their integration is the key to progress in both branches Most of the work on this monograph was done while I was a visiting lecturer at Massey University Palmerston North New Zealand The hospitality and stimulating academic environment of their Institute of Information Science and Technology is gratefully acknowledged I could not name all those who commented on my lecture notes and on the presentations themselves apart from them I want to thank the organisers and silent attendees of all the events and with a modicum of reluctance the greybeards who kept inquiring whether I was any nearer the completion of whatever stage I had been foolish enough to attach a date

Small-Area Income and Poverty Estimates National Research Council,Commission on Behavioral and Social Sciences and Education,Committee on National Statistics,Panel on Estimates of Poverty for Small Geographic Areas,2000-09-25 Recent trends in federal policies for social and economic programs have increased the demand for timely accurate estimates of income and poverty for states counties and even smaller areas Every year more than 130 billion in federal funds is allocated to states and localities through formulas that use such estimates These funds support a wide range of programs that include child care community development education job training nutrition and public health A new program of the U S Census Bureau is now providing more timely estimates for these programs than those from the decennial census which have been used for many years These new estimates are being used to allocate more than 7 billion annually to school districts through the Title I program that supports educationally disadvantaged children But are these estimates as accurate as possible given the available data How can the statistical models and data that are used to develop the estimates be improved What should policy makers consider in selecting particular estimates This new book from the National Research Council provides guidance for improving the Census Bureau s program and for policy makers who use such estimates for allocating funds

Improving Crop Estimates by Integrating Multiple Data Sources National Academies of Sciences, Engineering, and Medicine,Division of Behavioral and Social Sciences and Education,Committee on National Statistics,Panel on Methods for Integrating Multiple Data Sources to Improve Crop Estimates,2018-01-26 The National Agricultural Statistics Service NASS is the primary statistical data collection agency within the U S Department of Agriculture USDA NASS conducts hundreds of surveys each year and prepares reports covering virtually every aspect of U S agriculture Among the small area estimates produced by NASS are county level estimates for crops planted acres harvested acres production and yield by commodity and for cash rental rates for irrigated cropland nonirrigated cropland and permanent pastureland Key users of these county level estimates include USDA s Farm Services Agency FSA and Risk Management Agency RMA which use the estimates as part of their processes for distributing farm subsidies and providing farm insurance respectively Improving Crop Estimates by Integrating Multiple Data Sources assesses county level crop and cash rents estimates and offers recommendations on methods for integrating data sources to provide more precise county level estimates of acreage and yield for major crops and of cash rents by land use

This report considers technical issues involved in using the available data sources such as methods for integrating the data the assumptions underpinning the use of each source the robustness of the resulting estimates and the properties of desirable estimates of uncertainty **Survey Methodology** ,2006 **Nutrition Monitoring** United States.
