## **Internal Logic Foundations Of Mathematics From Kronecker To Hilbert:**

**Internal Logic** Y. Gauthier, 2013-03-09 Internal logic is the logic of content The content is here arithmetic and the emphasis is on a constructive logic of arithmetic arithmetical logic Kronecker's general arithmetic of forms polynomials together with Fermat's infinite descent is put to use in an internal consistency proof The view is developed in the context of a radical arithmetization of mathematics and logic and covers the many faceted heritage of Kronecker's work which includes not only Hilbert but also Frege Cantor Dedekind Husserl and Brouwer The book will be of primary interest to logicians philosophers and mathematicians interested in the foundations of mathematics and the philosophical implications of constructivist mathematics It may also be of interest to historians since it covers a fifty year period from 1880 to 1930 which has been crucial in the foundational debates and their repercussions on the contemporary scene **Internal Logic** Y.

Gauthier, 2014-01-15 Visualization, Explanation and Reasoning Styles in Mathematics P. Mancosu, Klaus Froyen Jørgensen, S.A. Pedersen, 2006-03-30 In the 20th century philosophy of mathematics has to a great extent been dominated by views developed during the so called foundational crisis in the beginning of that century These views have primarily focused on questions pertaining to the logical structure of mathematics and questions regarding the justification and consistency of mathematics Paradigmatic in this respect is Hilbert's program which inherits from Frege and Russell the project to formalize all areas of ordinary mathematics and then adds the requirement of a proof by epistemically privileged means nitistic reasoning of the consistency of such formalized theories While interest in modified versions of the original foundational programs is still thriving in the second part of the twentieth century several philosophers and historians of mathematics have questioned whether such foundational programs could exhaust the realm of important philosophical problems to be raised about the nature of mathematics Some have done so in open confrontation and hostility to the logically based analysis of mathematics which characterized the classical foundational programs while others and many of the contributors to this book belong to this tradition have only called for an extension of the range of questions and problems that should be raised in connection with an understanding of mathematics The focus has turned thus to a consideration of what mathematicians are actually doing when they produce mathematics Questions concerning concept formation understanding heuristics changes in style of reasoning the role of analogies and diagrams etc *Husserl and the Sciences* Richard Feist, 2004 Edmund Husserl 1859-1938 is one of the previous century's most important thinkers Often regarded as the Father of phenomenology this collection of essays reveals that he is indeed much more than that The breadth of Husserl's thought is considerable and much remains unexplored An underlying theme of this volume is that Husserl is constantly returning to origins revising his thought in the light of new knowledge offered by the sciences Published in English Dynamic Epistemic Logic Hans van Ditmarsch, Wiebe van der Hoek, Barteld Kooi, 2007-05-06 Dynamic Epistemic Logic is the logic of knowledge change This book provides various logics to support such formal specifications including proof systems Concrete examples and epistemic

puzzles enliven the exposition The book also offers exercises with answers It is suitable for graduate courses in logic Many examples exercises and thorough completeness proofs and expressivity results are included A companion web page offers slides for lecturers and exams for further practice Philosophical Dimensions of Logic and Science Artur Rojszczak, Jacek Cachro, Gabriel Kurczewski, 2013-04-17 Philosophical Dimensions of Logic and Science is a collection of outstanding contributed papers presented at the 11th International Congress of Logic Methodology and Philosophy of Science held in Krak w in 1999 The Congress was a follow up to the series of meetings initiated once by Alfred Tarski which aimed to provide an interdisciplinary forum for scientists philosophers and logicians The articles selected for publication in the book comply with that idea and innovatively address current issues in logic metamathematics philosophy of language philosophy of science and cognitive science as well as philosophical problems of biology chemistry and physics The volume will be of interest to philosophers logicians and scientists interested in foundational problems of their disciplines **In the Scope of Logic, Methodology and Philosophy of Science** Peter Gärdenfors, Jan Wolenski, K. Kijania-Placek, 2002-12-31 This is the first of two volumes containing papers submitted by the invited speakers to the 11th International Congress of Logic Methodology and Philosophy of Science The book presents the state of the intellectual discourse in the respective fields

**The Limits of Logical Empiricism** Arthur Pap, 2006-03-02 This volume collects some of the most significant papers of Arthur Pap Pap s work played an important role in the development of the analytic tradition This goes beyond the merely historical fact of Pap s influential views of dispositional and modal concepts Pap s writings in philosophy of science modality and philosophy of mathematics provide insightful alternative perspectives on philosophical problems of current interest

*Minkowski Spacetime: A Hundred Years Later* Vesselin Petkov, 2010-03-11 Celebrating the one hundredth anniversary of the 1909 publication of Minkowski s seminal paper Space and Time this volume includes a fresh translation as well as the original in German and a number of contributed papers on the still controversial subject **Scientific Progress** Craig Dilworth, 2007-09-18 Kuhn and Feyerabend formulated the problem Dilworth provides the solution In the fourth edition of this highly original book Craig Dilworth answers the questions raised by the incommensurability thesis Logical empiricism cannot account for theory conflict Popperianism cannot account for how one theory is a progression beyond another Dilworth s Perspectivist conception of science covers both bases with a concept of scientific progress based on both rationalism and empiricism *The Adventure of Reason* Paolo Mancosu, 2014-01-09 Paolo Mancosu presents a series of innovative studies in the history and the philosophy of logic and mathematics in the first half of the twentieth century The Adventure of Reason is divided into five main sections history of logic from Russell to Tarski foundational issues Hilbert s program constructivity Wittgenstein G del mathematics and phenomenology Weyl Becker Mahnke nominalism Quine Tarski semantics Tarski Carnap Neurath Mancosu exploits extensive untapped archival sources to make available a wealth of new material that deepens in significant ways our understanding of these fascinating areas of modern intellectual history At the same time the book is a

contribution to recent philosophical debates in particular on the prospects for a successful nominalist reconstruction of mathematics the nature of finitist intuition the viability of alternative definitions of logical consequence and the extent to which phenomenology can hope to account for the exact sciences      *Blameworthy Belief* Nikolaj Nottelmann, 2007-07-18

Believing the wrong thing can have drastic consequences The question of when a person is not only ill guided but genuinely at fault for holding a particular belief goes to the root of our understanding of such notions as criminal negligence and moral responsibility This book explores the conditions under which someone may be deemed blameworthy for holding a particular belief drawing on contemporary epistemology ethics and legal scholarship      *Trading Ontology for Ideology* L. Decock, 2013-03-09

Willard VanOrman Quine has probably been the most influential th American philosopher of the 20 century His work spans over seven decades and covers many domains in philosophy He has made major contributions to the fields of logic and set theory philosophy of logic and mathematics philosophy of language philosophy of science epistemology and metaphysics Quine s first work in philosophy was in the field of logic His major contributions are the two set theoretic systems NF 1936 and ML 1940 1 These systems were alternatives to the type theory of Principia Mathematica or Zermelo s set theory and are still being studied by 2 mathematicians An indirect contribution to the field of logic is his strong resistance to modal logic Quine s objections to the notions of necessity and analyticity have influenced the development of modal logic Quine has had an enormous influence on philosophy of mathematics When Quine entered philosophy there was a discussion on the foundations of mathematics between the schools of intuitionism formalism and conventionalism Quine soon took issue with Carnap s conventionalism in Truth by convention 4 1936 Quine has never joined one of the other schools but has added new elements that are the basic ones of the 5 contemporary schools of nominalism platonism and structuralism Quine has long been in the shadow of Benacerraf and Putnam in this field At the moment there seems to be a renewed interest in Quine s work and most philosophers explicitly refer to Quine s work      Abductive Reasoning Atocha Aliseda, 2006-02-16

Abductive Reasoning Logical Investigations into Discovery and Explanation is a much awaited original contribution to the study of abductive reasoning providing logical foundations and a rich sample of pertinent applications Divided into three parts on the conceptual framework the logical foundations and the applications this monograph takes the reader for a comprehensive and erudite tour through the taxonomy of abductive reasoning via the logical workings of abductive inference ending with applications pertinent to scientific explanation empirical progress pragmatism and belief revision      The Withdrawal of Rights O. Ezra, 2013-06-29

Like most discussions within the tradition of rights talk this study is motivated by the desire to promote the idea that rights are moral assets that people should acquire in the course of their membership within social and political frameworks However while most participants in rights talk concentrate on the safety and protection constraints required for a successful exercising of rights the present study inquires into the circumstances under which people s rights lose their validity The author believes that if we want to prevent the erosion of the role of rights within society and to

encourage their obligatory status we should prevent their misuse or their unjustified or excessive use Those who have interests in rights and are concerned about their withdrawal or denial will find a unique and inventive way of dealing both with the use as well as the abuse of rights *Philosophical Lectures on Probability* Bruno de Finetti, 2008-05-01 Bruno de Finetti 1906-1985 is the founder of the subjective interpretation of probability together with the British philosopher Frank Plumpton Ramsey His related notion of exchangeability revolutionized the statistical methodology This book based on a course held in 1979 explains in a language accessible also to non mathematicians the fundamental tenets and implications of subjectivism according to which the probability of any well specified fact F refers to the degree of belief actually held by someone on the ground of her whole knowledge on the truth of the assertion that F obtains Theoretical Knowledge Viacheslav Semenovitch Stepin, 2005-07-12 He shows direct and inverse links between foundations of science and new theories and empirical facts evolved from those how among many potentially possible histories of science a culture selects just those directions which become a real history of science The author analyses mechanisms of the generation of scientific theories and shows that those are changed in the process of historical development of science He displays three historical types of scientific rationality classical non classical and post non classical which appears in modern science and shows features of their coexistence and interplay It is shown that along with the emerging of post non classical rationality science increases the sphere of its worldview applications Science begins to correlate not only with the basic values of technogenic civilization but also with some values and patterns of traditional cultures **Attitudes and Changing Contexts** Robert van Rooij, 2006-03-30 In this book the author defends a unified externalists account of propositional attitudes and reference and formalizes this view within possible world semantics He establishes a link between philosophical analyses of intentionality and reference and formal semantic theories of discourse representation and context change Stalnakerian diagonalization plays an important role here Anaphora are treated as referential expressions while presupposition is seen as a propositional attitude The relation between belief change and the semantic analyses of conditional sentences and evidential knowledge and buletic desire propositional attitudes is discussed extensively **Formal Ontology and Conceptual Realism** Nino B. Cocchiarella, 2007-09-05 Theories about the ontological structure of the world have generally been described in informal intuitive terms This book offers an account of the general features and methodology of formal ontology The book defends conceptual realism as the best system to adopt based on a logic of natural kinds By formally reconstructing an intuitive informal ontological scheme as a formal ontology we can better determine the consistency and adequacy of that scheme Optic Flow and Beyond L.M. Vaina, Scott A. Beardsley, Simon K. Rushton, 2004-04-30 Optic flow provides all the information necessary to guide a walking human or a mobile robot to its target Over the past 50 years a body of research on optic flow spanning the disciplines of neurophysiology psychophysics experimental psychology brain imaging and computational modelling has accumulated Today when we survey the field we find independent lines of research have now

converged and many arguments have been resolved simultaneously the underpinning assumptions of flow theory are being questioned and alternative accounts of the visual guidance of locomotion proposed At this critical juncture this volume offers a timely review of what has been learnt and pointers to where the field is going
