International Encyclopedia Of The Social Volume 13:

International Encyclopedia of the Social Sciences, 1968 *The Growth of Economic Thought* Henry William Spiegel, 1991 In a new and updated edition of this classic textbook Henry William Spiegel brings his discussion and analysis of economic thought into the 1990s A new introductory chapter offering an overall view of the history of economics and a bibliographic survey of the economic literature of the 1980s and early 1990s have been added Maintaining the link between economics and the humanities Spiegel's text will continue to introduce students to a wide range of topics in the history of economic thought From reviews of previous editions The history of economic thought to end all histories of economic thought Robert D Patton *Journal of Economic Literature* The book is in the grand tradition of the history of doctrines It is a history of economic thought broadly conceived and superbly written to boot It is not too much to say that Spiegel's book will become and remain a leading text in the field Warren J Samuels *Social Science* The author conveys the essence of an idea simply and clearly yet in a graceful style William F Kennedy *Journal of Economic Literature* *Domains and Major Transitions of Social Evolution* Jacobus J. Boomsma, 2023-05-24 Evolutionary change is usually incremental and continuous but some increases in organizational complexity have been radical and divisive Evolutionary biologists who refer to such events as major transitions have not always appreciated that these advances were novel forms of pairwise commitment that subjugated previously independent agents Inclusive fitness theory convincingly explains cooperation and conflict in societies of animals and free living cells but to deserve its eminent status it should also capture how major transitions originated from prokaryote cells to eukaryote cells via differentiated multicellularity to colonies with specialized queen and worker castes As yet no attempt has been made to apply inclusive fitness principles to the origins of these events *Domains and Major Transitions of Social Evolution* develops the idea that major evolutionary transitions involved new levels of informational closure that moved beyond looser partnerships Early neo Darwinians understood this principle but later social gradient thinking obscured the discontinuity of life's fundamental organizational transitions The author argues that the major transitions required maximal kinship in simple ancestors not conflict reduction in already elaborate societies Reviewing more than a century of literature he makes testable predictions proposing that open societies and closed organisms require very different inclusive fitness explanations It appears that only human ancestors lived in societies that were already complex before our major cultural transition occurred We should therefore not impose the trajectory of our own social history on the rest of nature This thought provoking text is suitable for graduate level students taking courses in evolutionary biology behavioural ecology organismal developmental biology and evolutionary genetics as well as professional researchers in these fields It will also appeal to a broader interdisciplinary audience including the social sciences and humanities **Re-theorising Learning and Research Methods in Learning Research** Crina Damşa, Antti Rajala, Giuseppe Ritella, Jasperina Brouwer, 2023-09-22 *Re Theorising Learning and Research Methods in Learning Research* explores the latest developments in the field of learning theory

offering an overview of emerging methods and demonstrating how recent research contributes to furthering understanding of learning This book illustrates how theory and methods inform one another facilitating advancements in the field while addressing the ways in which societal and technological change create a need for adapting approaches to examining learning Drawing on an international team of contributors this book comprises 17 chapters and three commentaries thematically organised into three broad sections emerging theories and conceptualisations of learning and how they drive methodological development new methods or innovative use of existing methods and their contribution to theory development theories and methods that emerge in connection with societal changes Both novice researchers and more experienced scholars will benefit from an overview of recent theoretical and methodological advances in the learning research field This is an invaluable resource for researchers in the learning and educational research field and will also support Masters and PhD students to understand how learning theories and research methodology in the field have been evolving in recent years

Choosing Models of Society and Social Norms Adolfo Critto, 1999 Choosing Models of Society and Social Norms offers an innovative approach to social norms and decision making that encourages the identification of social norms along with their causes and consequences Adolfo Critto points out that social norms condition behavior but are also conditioned by human decisions He notes that social norms generally only provide partial and temporary solutions to human needs and problems so must be critically analyzed in order to understand their relationship to decision making Critto approaches this relationship through sacred focused on transcendent ends and expedient focused on efficient means value

orientations warning that a one sided focus on either of these orientations leads to inconsistency He stresses the importance of language communication and education showing how they relate to social norms Through his analysis the author provides an understanding of the creation of social norms what influences them and the evaluation of those that already exist **The**

Kamalipour, 2019-08-12 This eclectic and multicultural volume contains 17 papers authored or co authored by 25 scholars and doctoral students representing 11 countries They discuss a wide range of global issues including immigration marginalization identity mass media politics social networking education digital media advertising and globalization This book will be an excellent supplement to senior and graduate level courses in international communication cultural studies mass media journalism global studies political communication intercultural communication and related subjects Social Control in Europe: 1500-1800 Herman Roodenburg, 2004 This first volume of a two volume collection of essays provides a comprehensive examination of the idea of social control in the history of Europe The uniqueness of these

volumes lies in two main areas First the contributors compare methods of social control on many levels from police to shaming church to guilds Second they look at these formal and informal institutions as two way processes Unlike many studies of social control in the past the scholars here examine how individuals and groups that are being controlled necessarily participate in and shape the manner in which they are regulated Hardly passive victims of discipline and control these folks instead claimed agency in that process accepting and resisting and thus molding the controls under which they functioned The essays in this volume focus on the interplay of ecclesiastical institutions and the emerging states examining discipline from a bottom up perspective Book jacket **The Social Psychology of Everyday Politics** Caroline

Howarth, Eleni Andreouli, 2016-11-03 *The Social Psychology of Everyday Politics* examines the ways in which politics permeates everyday life from the ordinary interactions we have with others to the sense of belonging and identity developed within social groups and communities. Discrimination, prejudice, inclusion and social change politics is an on going process that is not solely the domain of the elected and the powerful. Using a social and political psychological lens to examine how politics is enacted in contemporary societies, the book takes an explicitly critical approach that places political activity within collective processes rather than individual behaviors. While the studies covered in the book do not ignore the importance of the individual, they underscore the need to examine the role of culture, history, ideology and social context as integral to psychological processes. Individuals act but they do not act in isolation from the groups and societies in which they belong. Drawing on extensive international research with contributions from leaders in the field as well as emerging scholars, the book is divided into three interrelated parts which cover: The politics of intercultural relations; Political agency and social change; Political discourse and practice. Offering insights into how psychology can be applied to some of the most pressing social issues we face, this will be fascinating reading for students of psychology, political science, sociology and cultural studies as well as anyone working in the area of public policy.
