Association for Computing Machinery (US) ; 1988 ,1988 Parallel Evolution of Parallel Processors G. Lerman,L. Rudolph,2013-03-07 Study the past if you would divine the future CONFUCIUS A well written organized and concise survey is an important tool in any newly emerging field of study This present text is the first of a new series that has been established to promote the publications of such survey books A survey serves several needs Virtually every new research area has its roots in several diverse areas and many of the initial fundamental results are dispersed across a wide range of journals books and conferences in many different sub fields A good survey should bring together these results But just a collection of articles is not enough Since terminology and notation take many years to become standardized it is often difficult to master the early papers In addition when a new research field has its foundations outside of computer science all the papers may be difficult to read Each field has its own view of elegance and its own method of presenting results A good survey overcomes such difficulties by presenting results in a notation and terminology that is familiar to most computer scientists A good survey can give a feel for the whole field It helps identify trends both successful and unsuccessful and it should point new researchers in the right direction *Scientific Directory and Annual Bibliography* National Institutes of Health (U.S.),1988 Presents the broad outline of NIH organizational structure the professional staff and their scientific and technical publications covering work done at NIH

The Cache Coherence Problem in Shared-Memory

Multiprocessors Igor Tartalja,Veljko Milutinović,1996-02-13 Almost all software solutions are developed through academic research and implemented only in prototype machines leaving the field of software techniques for maintaining the cache

coherence widely open for future research and development This book is a collection of all the representative approaches to software coherence maintenance including a number of related efforts in the performance evaluation field The book presents a selection of 27 papers dealing with state of the art software solutions for cache coherence maintenance in shared memory multiprocessors It begins with a set of four introductory readings that provides a brief overview of the cache coherence problem and introduces software solutions to the problem The text defines and illustrates static and dynamic software schemes techniques for modeling performance evaluation mechanisms and performance evaluation studies The book is intended for the experienced reader in computer engineering but possibly a novice in the topic of cache coherence It also provides an in depth understanding of the problem as well as a comprehensive overview for multicomputer designers computer architects and compiler writers In addition it is a software coherence reference handbook for advanced undergraduate and typical graduate students in multiprocessing and multiprogramming areas
