Light Scattering In Solids:

Light Scattering in Solids 1 M. Cardona, 2013-06-05 This book is devoted to the problem of inelastic light scattering in semiconductors i.e. to processes in which a photon impinges upon a semiconductor creating or annihilating one or several quasi particles and then emerges with an energy somewhat different from that of the incident photon In light scattering spectroscopy the incident photons are monochromatic one measures the energy distribution of the scattered photons with a spectrometer Because of its monochromaticity power and collimation lasers are ideal sources for light scattering spectroscopy Consequently developments in the field of light scattering have followed in recent years the developments in laser technology The scattering efficiencies are usually weak and thus light scattering spectroscopy requires sophisticated double and triple monochromators with high stray light rejection ratio Both powerful lasers and good monochromators are specially important for studying the scattering of light to which the samples of interest are opaque as is the case in most semiconductors This explains why these materials are relatively late comers to the field of light scattering In spite of these difficulties the field of light scattering in semiconductors has experienced a boom in recent years and reached a certain degree of maturity Because of space limitations the editor was faced with the necessity of making a choice in the subjects to be included In spite of the natural bias towards his own research interests he hopes to have gathered a number of articles representative of present day research in the field Light Scattering in Solids Manuel Cardona, 1983 **Light Scattering in Solids** Bernard Bendow, Joseph L.
