**Interactions Of Photons And Neutrons With Matter (2nd Edition)** Michael Kotlarchyk, Sow-hsin Chen, 2007-03-09

This invaluable book is based on lecture notes developed for a one semester graduate course entitled Interaction of Radiation with Matter taught in the Department of Nuclear Science and Engineering at the Massachusetts Institute of Technology. The main objective of the course is to teach enough quantum and classical radiation theory to allow students in engineering and the applied sciences to understand and have access to the vast literature on applications of ionizing and non ionizing radiation in materials research. Besides presenting the fundamental physics of radiation interactions the book devotes individual chapters to some of the important modern day experimental tools such as nuclear magnetic resonance photon correlation spectroscopy and the various types of neutron x ray and light scattering techniques. End of chapter problems have been added for the new edition making the book more appropriate as a course textbook.

**Outdoor Lighting: Physics, Vision and Perception** Duco Schreuder,2008-08-15 The present book is based on the experience of the author The experience is mainly the result of years of research of consulting work and in participation in policy decision making in many fields most but not all related to outdoor lighting To some degree the book represents the preference of the author The selection of the subjects is based on more than 50 years of experience of what is desirable to know for persons engaged in scientific research or practical application in the fields of lighting and vision The subjects deal with a number of fundamental aspects The theorists must have them at their fingertips whereas the practical engineers may assume them as known in their daily work The selection of subjects is based in part by the questions that came to the author over the years but even more by the preference of the author himself In this respect it is a personal book Thus it should be

stressed that the book is not a handbook or even a textbook many subjects that commonly are treated in such books are not included here Not because they lack importance but because the author feels that they are adequately treated elsewhere Some relevant works are mentioned in the References Over the years the author has been engaged in giving courses on vision and lighting lately more in particular on Masterclasses on a post graduate or post doctorate level *Catalogue* Pharmaceutical Society of Great Britain.
