

# A Lens on the Universe

Measuring the amount of matter in the universe — including the invisible dark variety thought to account for ~85% of matter — is fundamental to understanding the evolution of the universe. Using a phenomenon called ‘gravitational lensing’ scientific collaborators have produced the most precise matter map to date. The results were obtained using the Atacama Cosmology Telescope (ACT) in Chile.

**Gravitational lensing** occurs when light travels near a massive object — such as a galaxy, galaxy cluster, or clump of dark matter. The gravitational field generated by these huge objects bends the light’s path.

## Mapping Matter with Light

Cosmic microwave background (CMB) radiation — ancient light emitted when the universe was in its infancy — has travelled billions of years, witnessing the formation of stars, galaxies, and galaxy clusters. The gravitational fields of these massive objects have influenced the path of CMB light.

Light/dark Universe, The: Light From Galaxies, Dark Matter And Dark Energy Paul S Wesson, James M Overduin, 2008-08-20 To the eyes of the average person and the trained scientist the night sky is dark even though the universe is populated by myriads of bright galaxies Why this happens is a question commonly called Olbers Paradox and dates from at least 1823 How dark is the night sky is a question which preoccupies astrophysicists at the present The answer to both questions tells us about the origin of the universe and the nature of its contents luminous galaxies like the Milky Way plus the dark matter between them and the mysterious dark energy which appears to be pushing everything apart In this book the fascinating history of Olbers Paradox is reviewed and the intricate physics of the light dark universe is examined in detail The fact that the night sky is dark a basic astronomical observation that anybody can make turns out to be connected with the finite age of the universe thereby confirming some event like the Big Bang But the space between the galaxies is not perfectly black and data on its murkiness at various wavelengths can be used to constrain and identify its unseen constituents

A Ray of Light in a Sea of Dark Matter Charles Keeton, 2014-04-30 What is in the dark Countless generations have gazed up at the night sky and asked this question the same question that cosmologists ask themselves as they study the universe The answer turns out to be surprising and rich The space between stars is filled with an exotic substance called dark matter that exerts gravity but does not emit absorb or reflect light The space between galaxies is rife with dark energy that creates a sort of cosmic antigravity causing the expansion of the universe to accelerate Together dark matter and dark energy account for 95 percent of the content of the universe News reporters and science journalists routinely talk about these findings using terms that they assume we have a working knowledge of but do you really understand how astronomers arrive at their findings or what it all means Cosmologists face a conundrum how can we study substances we cannot see let alone manipulate A powerful approach is to observe objects whose motion is influenced by gravity Einstein predicted that gravity can act like a lens to bend light Today

we see hundreds of cases of this instances where the gravity of a distant galaxy distorts our view of a more distant object creating multiple images or spectacular arcs on the sky Gravitational lensing is now a key part of the international quest to understand the invisible substance that surrounds us and binds the universe together A Ray of Light in a Sea of Dark Matter offers readers a concise accessible explanation of how astronomers probe dark matter Readers quickly gain an understanding of what might be out there how scientists arrive at their findings and why this research is important to us Engaging and insightful Charles Keeton gives everyone an opportunity to be an active learner and listener in our ever expanding universe Watch a video with Charles Keeton Watch video now <http://www.youtube.com/watch?v=Uc3byXNS1G0>

Appreciating the magnificence of Jesus gift is difficult How can you appreciate the magnificence of something that you cannot understand Logic a few recent scientific discoveries and two faith choices tell us the purpose of our mortal bodies provide evidence for the existence of our souls and define the nature of our souls Our mortal bodies provide a critical experience that our souls cannot obtain in any other way The nature of the world in which our souls exist as well as the nature of time is then described as well as why mortals and souls experience time differently The two faith choices used in conjunction with these scientific discoveries are that God is love and that we are being created in the image of God When all these things are considered it then becomes possible to understand the necessity and magnificence of Jesus sacrifice

The book is aiming programmatically at showing that both in science and religious thinking the basic space time entity is ultimately built and defined by light In this sense the book is emphasizing the unique role of light in understanding the world around us The approach is based on the belief that science and religion represent two very different modes of addressing reality both of them being relevant to us as human beings The language of science and religion and the answers they each

give to the same questions differ due to the elementary postulates on which they are built A dialogue and debate in the classical sense is therefore meaningless This is why the book has allowed the voice of Physics and the voice of the Philosophy of Religion to be heard in their distinctiveness and nobility Instead of endless polemics the work proposes to acknowledge with patience and respect the altera pars approach for the same overarching topics highlighting the complexity of both domains and on a transdisciplinary level pointing towards the complexity of our mind and reality The book is illustrated by Valentin Petridean The images mirror and enrich the rigorous game of the intellect illuminating it with sparks of vivid imagination CONTENTS Memories from the past and the need for a new dialogue Experiment versus Experience The Nitty Gritty of Light The Nature of Light Colours and Perception Producing and Absorbing Light The Speed of Light s Propagation Light and Aether Ideal Space Tangible Space Ideal Time Tangible Time The Principle of Relativity The Aftermath Changing Paradigms Memories of the Future Concluding remarks *Light Dark Matter in Theory and Experiment* Martin Wolfgang Winkler, 2012 *Dark Matter Theory* Intro Books, 2019-12-19 Dark matter is an undetected mass form that leaves no light or least light and could be identified through its gravitational forces The existence of the dark energy and the dark matter were found late in the 1930s There were solid evidences in the findings of the early 20th century scientist work for the existence of the dark matter that emits least light Sources of a repulsive force that is undetected by humans so far is the dark energy This dark energy is accelerating the rate at what the universe is expanding The existence of the dark energy and the dark matter were just recent findings There is no depth in the understanding of these matter and energy *How Old Are We* Shirley Scott, 2010-12-20 Ever ask y ourself how big space is Or how long time will go on Or maybe you want to know what is waiting for us after our suns dies and our galaxy turns into nothing but a black hole in space May be you wonder what ghosts are and where aliens come from Or you just seem to have knowledge of something you ve never studied Or maybe you have had a lot of deja Vu moments and you don t know why How old are we explores all these questions and events to help you understand life time and space in an easy to read book Shirley is a student of the Universe and looks at all these subjects from a clairvoyant side She views many things as metaphors supplied by the Universe to help us learn lessons the easy way if we just look at them in a non judgmental way How Old are We shows us how clear life can be when you take the time to step off the stage see what is really going on in our life **Light of the Cosmic Mysteries** Pasquale De Marco, 2025-07-26 Embark on a celestial voyage of discovery with *Light of the Cosmic Mysteries* an illuminating exploration of the enigmatic tapestry of existence Within these pages you will find a symphony of cosmic insights unveiling the profound interconnectedness of all things Journey through the boundless realm of the cosmos where the cosmic dance of energy and matter weaves the fabric of reality Unravel the enigmas of time and space and explore the unseen realms that lie beyond our perception Discover the sacredness of life and the interconnectedness of all beings as we delve into the rhythms of evolution and adaptation *Light of the Cosmic Mysteries* invites you to contemplate the cosmos as a mirror of your inner self revealing

Dark Side of the Universe Iain Nicolson,2007-03-20 Once we thought the universe was filled with shining stars dust planets and galaxies We now know that more than 98 percent of all matter in the universe is dark It emits absolutely nothing yet bends space and time keeps stars speeding around galaxies and determines the fate of the universe But dark matter is only part of the story Scientists have recently discovered that the expansion of the universe is speeding up driven by a mysterious commodity called dark energy Depending on what dark matter and energy happen to be our seemingly quiet universe could end its days in a Big Rip tearing itself apart or a Big Crunch collapsing down to a universe the size of nothing ready to be reincarnated in a Big Bang once again For the general reader and armchair astronomer alike Iain Nicolson s fascinating account shows how our ideas about the nature and the content of the universe have developed He highlights key discoveries explains underlying concepts and examines current thinking on dark matter and dark energy He describes techniques that astronomers use to explore the remote recesses of the cosmos in their quest to understand its composition evolution and ultimate fate

**Light from Dark Stars and Light Through Dark Matter** Veronica Jane Dike,2023 This thesis presents progress in two subfields of astrophysics first in galactic astronomy describing how a large survey of ground state silicon monoxide emission can probe asymptotic giant branch stellar envelope expansion and second in observational cosmology presenting novel constraints on primordial black holes PBH as a fraction of dark matter by leveraging strong gravitational lensing The Galactic project searched the Very Large Array Bulge Asymmetries and Dynamical Evolution BAaDE survey for maser and thermal emission from the  $J\ 1\ 0\ v\ 0$  ground vibrational state transition I present results characterizing these sources as a nearby disk population and derive the expansion velocity of the emission region by fitting thermal components of

lines to an emission model For the small number of sources with corresponding carbon monoxide emission I find the expansion velocities to be similar for both the thermal SiO and CO evidence that both emissions are produced in the same region above the star where the gas has reached terminal velocity In the cosmology portion of the thesis the objective is to use a flux ratio analysis to put constraints on intermediate mass PBH as a possible fraction of dark matter A population of PBH within the dark matter halo of a lensing galaxy would affect the magnification and therefore the flux ratios of the images in a quadruply imaged quasar quad By forward modeling the flux ratios using an Approximate Bayesian Computing technique I obtain a constraint on PBH within the mass range of  $10^4 M_\odot$
