## **Lighting Technology Developments For Automobiles:**

*Lighting Technology Developments for Automobiles* Society of Automotive Engineers, 2001 Collection of papers from the Lighting Technology and Human Factors in Driver Vision and Lighting sessions of the 2001 SAE World Congress held March 5-8 in Detroit Michigan. Papers provide research and development work results in light source studies, new concepts and applications, and new evaluation and analysis approaches. Results also show a closer relationship between the advantages of new technologies and benefits to driver vision. Paper topics include evaluation of high intensity discharge automotive forward lighting system strategies and technology for improved safety and comfort with adaptive headlamps, calculation of nighttime road image under automotive headlamp lights, automatic vehicle high beam headlamp control system, driving in snow, effect of headlamp color at mesopic and photopic light levels, non planar rearview mirrors, the influence of experience and driver age on gap acceptance and vehicle detection, considerations in LED photometry, solid light guide optics for thin lamp applications, contour lighting for safety and appearance, and signal image enhancement of projection type headlamps by additional optics.

**Automotive Lighting and Human Vision** Burkard Wördenweber, Jörg Wallaschek, Peter Boyce, Donald D.

Hoffman, 2007-03-13 It is possible to buy excellent books on human vision as well as about automotive lighting. Unfortunately these books have little or no common content. But in fact these fields do overlap. Providing optimal conditions for human vision is what automotive lighting is all about. Our motivation for writing this book arises from interdisciplinary studies of human vision and lighting. Initially we intended the book to provide background information on human vision to engineers working in automotive lighting. At the same time we planned to introduce basic concepts of automotive lighting to experts in human vision. However because of the intricate connections between human vision and automotive lighting it turns out that the book provides new insights to anyone interested in either or both subjects. The subject matter is complex and spans a number of disciplines from psychology to mechatronics. Hence there are very few individuals who are experts in all fields. Looking at the nature of human vision it is surprising to find out how much every one of us takes it for granted. Rarely are we aware of how we use vision predominantly to verify our internal model of our surroundings. Many accidents, particularly at night, stem from the fact that our internal model misrepresented a significant part of our surroundings. Taking knowledge on human vision into account in the design of future automotive lighting systems reduces the risk of accidents at night.

*Lighting for Driving* Peter R. Boyce, 2008-12-04 By considering vehicle signal and road lighting as integrated means of communication, this unique authoritative work explains the thinking and scientific reasoning behind various forms of lighting and analyzes their contribution to the driver's understanding of real and potential road hazards. Attention is also given to how these forms of lighting are likely to evolve in response to the development of new technology and an improved understanding of ergonomics.

importance of understanding the mechanism of the rebound effect on different scopes has implications for both economic theory and climate policy *Annual Energy Outlook* ,2005 **Light Vehicle Tyres** Neil Mullineux,2004 The tyre industry is the largest single rubber manufacturing industry in the world The high performance demanded of tyres has led to extensive research and development in this field and constant innovation This report takes an overview of the latest technology combined with the market situation worldwide Three large companies Bridgestone Goodyear and Michelin now dominate the world tyre market with a share of about 56 per cent There then follow four mid sized companies which have about 18 per cent of the world market Continental Sumitomo Pirelli and Yokohama with a combined share of 17.6 per cent In total eleven companies account for 81.6 per cent of the world market Even though the largest companies have a turnover well in excess of USD10bn they remain largely specialist tyre manufacturers Many of the smaller companies also concentrate almost exclusively on tyres However the medium sized companies are diversifying away from tyre manufacturing Unusually if not uniquely in the automotive components industry the tyre manufacturers only sell a minority of their output to OEMs component is the size of the replacement market or aftermarket three quarters of road tyres are sold as replacement tyres and only one quarter as original equipment The big three tyre manufacturers dominate the OE market but other large regional players also have a share particularly in Europe Worldwide the replacement tyre market for light vehicles represents about 714m tyres The replacement tyre market is certainly more profitable for the tyre manufacturers but it has distinct problems The general problems of slow growth and market maturity are exacerbated by cyclical growth in supply to OEMs Despite the poor profitability of sales to OE customers and even though the replacement market represents over 70 per cent of the passenger car tyre industry's sales tyre makers profitability is also cyclical The replacement market is a relatively profitable sector of the overall tyre market but it cannot compensate for the vagaries of the OE market A traditional indication of market maturity is continual pricing pressure in the market small competitors to keep continual pressure on prices In broad terms a tyre which cost USD69.90 in 1979 sold for USD41.02 in 2003 The major companies within the tyre industry are all constrained by the laws of economics and subject to similar commercial pressures In very broad terms the cost of tyre manufacture breaks into three parts raw materials labour and fixed costs The tyre industry has high fixed costs making it extremely difficult to improve returns unless costs are cut or market share gained Raw materials typically represent 25 per cent of the selling price of a car tyre Labour costs represent about 30 per cent of sales and this has led to a move for manufacture in lower labour cost countries This has been helped by relatively low transportation costs for the inter regional movement of tyres about USD1.2 for a passenger tyre In the last decade all manufacturers have tried to increase productivity in existing operations in order to become low cost producers The continuing drive for improved productivity has resulted in excess capacity in many areas and product sectors than demand There is a close relationship between aggregate supply and profitability for individual tyre companies As a result there have been gradual moves towards

consolidation Before 1985 a dozen large companies dominated the world tyre market but after a rapid series of mergers and acquisitions seven companies emerged with three quarters of the market
