Prediction Using Deterministic-Probabilistic Approach Baranovskiy, Nikolay Viktorovich,2021-05-21 Forest fires cause
ecological economic and social damage to various states of the international community The causes of forest fires are rather
varied but the main factor is human activity in settlements industrial facilities objects of transport infrastructure and
intensively developed territories in other words anthropogenic load In turn storm activity is also a basic reason for forest
fires in remote territories Therefore scientists across the world have developed methods approaches and systems to predict
forest fire danger including the impact of human and storm activity on forested territories An important and comprehensive
point of research is on the complex deterministic probabilistic approach which combines mathematical models of forest fuel
ignition by various sources of high temperature and probabilistic criteria of forest fire occurrence Forest Fire Danger
Prediction Using Deterministic Probabilistic Approach provides a comprehensive approach of forest fire danger prediction
using mathematical models of forest fuel with consideration to anthropogenic load storm activity and meteorological
parameters Specifically it uses the deterministic probabilistic approach to predict forest fire danger and improve forest
protection from fires The chapters will cover various tree types mathematical models and solutions for reducing the
destructive consequences of forest fires on ecosystems This book is ideal for professionals and researchers working in the
field of forestry forest fire danger researchers executives computer engineers practitioners government officials
policymakers academicians and students looking for a new system to predict forest fire danger *Handbook of Atmospheric
Electrodynamics, Volume I* Hans Volland,2017-11-22 The participation of such diverse scientific and technical disciplines as
meteorology astronomy atmospheric electricity ionospheric and magnetospheric physics electromagnetic wave propagation
and radio techniques in the research of atmospheric means that results are published in scientific papers widely spread
throughout the literature This Handbook collects the latest knowledge on atmospheric and presents it in two volumes Each
chapter is written by an expert in his or her field Topics include the physics of thunderclouds thunder global atmospheric
electric currents biological aspects of sferics and various space techniques for detecting lightning within our own atmosphere
as well as in the atmospheres of other planets Up to date applications and methodology are detailed Volumes I and II offer a
comprehensive discussion that together will serve as an important resource for practitioners professionals and students alike
