Mind Without a Home Kristina Morgan, 2013-08-13 This book brings readers straight inside the tortuous nature of the disease of schizophrenia chronicled in short journal like chapters that narrate the author s

incredible story Experience the inner world of a woman with schizophrenia in this brutally honest lyrical memoir Have you ever wondered what it is like in the mind of a person with schizophrenia How can one survive day after day unable to distinguish between one's inner nightmares and the everyday realities that most of us take for granted In her brutally honest highly original memoir Kristina Morgan takes us inside her head to experience the chaos fragmented thinking and the startling creativity of the schizophrenic mind With the intimacy of private journal like entries and the language of a poet she carries us from her childhood to her teen years when hallucinations began to hijack her mind and into adulthood where she began abusing alcohol to temper the punishing voices that only she could hear This is no formulaic tale of tragedy and triumph We feel Kristina's hope as she pursues an education and career and begins to build strong family connections friendships and intimacy and her devastation as the insistent voices convince her to throw it all away destroying herself and alienating everyone around her Woven through the pages of her life are stories of recovery from alcoholism and the search for her sexual identity in relationships with both women and men Eventually her journey takes her to a place of relative peace and stability where she finds the inner resources and support system to manage her chronic illnesses and live a fulfilling life

All in the Mind Prince D. Ekwedike, 2020-10-12 The universal laws work but not because the individual is knowledgeable of or an expert in the process The laws do not measure your understanding of its principles but your application of it is measurable Your mind is the master and your thoughts are the messengers Whatever you instruct your thoughts it will deliver to the universe which is the storage of abundance also called the store of infinite Doubt on its own is a very strong negative energy that brings a heavy chain of clouds to the universal law which needs every principle of faith and belief to complete the process This will be addressed in the book

The Minds and Manners of Wild Animals William Temple Hornaday, 1923

Complex Responsive Processes in Organizations Ralph Stacey, 2003-09-02 The past decade has seen increasing focus on the importance of information and knowledge in economic and social processes the so called knowledge economy This is reflected in the popularity amongst practicing managers and organizational theorists of notions of learning sense making knowledge creation knowledge management and intellectual capital in organizations and more recently of emotional intelligence as an important management skill This insightful book argues that the information processing view of knowledge creation held by systems thinkers is no longer tenable develops the alternative perspective of Complex Responsive Processes of relating drawing on the complexity sciences as a source for analogies with human action places self organizing interaction at the centre of the knowledge creating process in organizations Learning and knowledge creation are seen as qualitative processes of power relating that are emotional as well as intellectual creative as well as destructive enabling as well as constraining and the result is a radical questioning of the belief that organizational knowledge is essentially codified and centralized Instead organizational knowledge is understood to be in the relationships between people in an organization and has to do with the qualities of those relationships

The Scope and Limits of Folk Psychology David E. Ohreen, 2004 Explaining behaviour is ubiquitous in our society. We are constantly trying to figure out what other people are doing and will do. This study is a comprehensive investigation of the main philosophical and psychological problems regarding how and why humans explain behaviour. The author answers key questions about how folk psychology develops in children, its roots in evolution, its status within society, its relation to philosophy of mind and what sorts of folk psychological explanations should be considered rational. This assessment focuses on such theoretical positions as anti-realism, eliminativism, theory theory, simulation theory and modular theory in relation to folk psychology. The author argues for a radical, albeit intuitive, alternative that folk psychology should be seen as product of the culture in which one is raised.

Science Fiction and Philosophy Susan Schneider, 2010-06-03 A timely volume that uses science fiction as a springboard to meaningful philosophical discussions, especially at points of contact between science fiction and new scientific developments. Raises questions and examines timely themes concerning the nature of the mind, time travel, artificial intelligence, neural enhancement, free will, the nature of persons, transhumanism, virtual reality and neuroethics. Draws on a broad range of books, films and television series including *The Matrix*, *Star Trek*, *Blade Runner*, *Frankenstein*, *Brave New World*, *The Time Machine* and *Back to the Future*. Considers the classic philosophical puzzles that appeal to the general reader while also exploring new topics of interest to the more seasoned academic.

Animals as Persons Gary L. Francione, 2008-06-17 A prominent and respected philosopher of animal rights, law and ethical theory. Gary L. Francione is known for his criticism of animal welfare laws and regulations, his abolitionist theory of animal rights and his promotion of veganism and nonviolence as the baseline principles of the abolitionist movement. In this collection, Francione advances the most radical theory of animal rights to date. Unlike Peter Singer, Francione maintains that we cannot morally justify using animals under any circumstances and, unlike Tom Regan, Francione's theory applies to all sentient beings, not only to those who have more sophisticated cognitive abilities.

Philosophy through Film Amy Karofsky, 2025-03-31 This fifth edition of *Philosophy through Film* uses recently released, well-received movies to explore answers to classic questions in philosophy in an approachable yet philosophically rigorous manner. Author Amy Karofsky uses two films in each chapter to examine one long-standing philosophical question and assess some of the best solutions to it that have been offered. The chosen movies are not mere add-ons to an otherwise straightforward introductory text; instead, they are fully integrated into the discussion of the issues and the various positions. Each chapter also includes discussion questions, an annotated list of films related to the chapter topic, and two or three historically significant primary sources which are collected together at the end of the book. Changes to the fifth edition:

include The replacement of older movies with four new focus films Anatomy of a Fall Everything Everywhere All at Once Get Out and The Time Traveler's Wife The addition of new primary readings from Roderick Chisholm Jerry Fodor Baron d Holbach and Susan Wolf Important new sections added to Chapter 1 on Truth The Identity Theory of Truth and Chapter 5 on Artificial Intelligence The I in AI A major overhaul of Chapter 6 on free will determinism and moral responsibility Updated notes throughout The films examined in depth are Ad Astra Anatomy of a Fall Arrival Beautiful Boy Crimes and Misdemeanors Divergent Equilibrium Everywhere Everything All at Once Ex Machina Get Out Gone Baby Gone Her Inception Edge of Tomorrow The Matrix Memento A Serious Man Silence The Time Traveler's Wife For a collection of Story Lines of the Discussed Films by Elapsed Time visit www.routledge.com/9781032544595 A Primer on Unified Feel Theory Jerome Jacob Rappoport, 2006-06-02 For each of us life's dilemma can be reduced to two positions 1 The universe always existed you exist for a fleeting moment and the universe continues on 2 The universe was created when you were born and it will cease to exist when you die Both of these perspectives are absolutely true and they pose for the inquirer a dichotomous enigma Religion or what is purported to be so should be involved with these two aspects but it's not Unified Feel Theory is not religion but a religious process to be experienced and struggled with by every inquiring mind singularly and alone Not until the quintessential self is known by its own inquiring mind can it be of any meaningful service to its self or to others Society has managed to intimidate and encapsulate each inner self to such a degree that only those aspects and qualities needed and wanted by the collective are nurtured and allowed to make their presence known and be seen as the outer self The Equilibrium Texts outfit and encourage an inward journey to seek rescue and bring forth one's own inner being *The Oxford Handbook of Jonathan Edwards* Douglas A. Sweeney, Jan Stievermann, 2021-02-02 The Oxford Handbook of Jonathan Edwards offers a state of the art summary of scholarship on Edwards by a diverse international and interdisciplinary group of Edwards scholars many of whom serve as global leaders in the burgeoning world of research and writing on America's theologian As an early modern clerical polymath Edwards is of interest to historians theologians and literary scholars He is also an interlocutor for contemporary clergy and philosophical theologians All such readers and many more will find here an authoritative overview of Edwards' life ministry and writings as well as a representative sampling of cutting edge scholarship on Edwards from across several disciplines The volume falls into four sections which reflect the diversity of Edwards studies today The first section turns to the historical Edwards and grounds him in his period and the relevant contexts that shaped his life and work The second section balances the historical reconstruction of Edwards as a theological and philosophical thinker with explorations of his usefulness for constructive theology and the church today In part three the focus shifts to the different ways and contexts in which Edwards attempted to realize his ideas and ideals in his personal life scholarship and ministry but also to the ways in which these historical realities stood in tension with limited or resisted his aspirations The final section looks at Edwards' widening renown and influence as well as diverse appropriations This Handbook serves as an

authoritative guide for readers overwhelmed by the enormity of the multi lingual world of Edwards studies It will bring readers up to speed on the most important work being done and then serve them as a benchmark in the field of Edwards scholarship for decades to come

Initiation and Control of Gait from First Principles: A Mathematically Animated Model of the Foot Craig Nevin, 2010-05-21 This thesis examines the anatomical locations of the dynamic pressures that create the first five footprints when a standing person starts to walk It is hypothesized that the primary activity starts with the dorsiflexion or lifting of the great toe Consequently the metatarsophalangeal region of the forefoot was studied from three directions Viewed side on the great toe free body is found from a detailed post hoc analysis of previous kinematic data obtained from cadavers to operate as a cam The cam model also follows closely from Aristotle s ancient description of the hinged instrument of animate motion Viewed in coronal cross section the first metatarsal torsion strength was estimated in 13 humans 1 gorilla 3 chimpanzees 1 orangutan and 1 baboon set of dry bone specimens of the hands and feet The first metatarsal bone alone contributes 43% of the total strength of all the metatarsal bones A result unique amongst the hominids and apes studied Viewed in horizontal plan the dynamic components and principle axes of the footprints of 54 barefoot humans 32 male 22 female age 32 11 years were studied whilst standing on a 0.5m pressure plate and then immediately when walking over a 2m plate 4 sensors per cm² sampled at 100hz Two footprints were obtained during the initial stance posture and the first three footprints of the initial walk Three new principles of animate motion were deduced from the divergent results obtained from complete and dissected cadavers The metatarsal cam from the sagittal side view the ground reaction torque from the frontal coronal view and the amputation artifact The philosophy of experimenting on inanimate cadavers rather than living subjects was intensively researched Instead of assuming that gait is a uniform or regular motion as is usual the foot was analyzed rather as if it was a beam attached to the ground Engineering equations were used to determine the flexural properties of the foot every 0.01 seconds including the principle axes radius of gyration and the local shear stresses on the sensors spaced 5.7mm apart A sequence of these impressions creates a mathematically animated model of the footprint The local force under the foot was normalized against both the total force and contact duration The forces under the foot were each divided between 10 anatomical regions using individual masks for each foot strike Producing a 54 subject database from which the normal behavior of the foot could be quantified The group showed a surprisingly low right foot step off dominance of only 54% The combination of the radius of gyration and impulse in particular produces a succinct but powerful summary of the footprint during dynamic activity The initial angle and magnitudes of the loads that are applied and removed demonstrates that the body first rocks onto the heels after the instruction to walk is given The feet simultaneously invert and their arches rise off the ground as anticipated The principle axes were then animated in a mathematical four dimensional model The horizontal radius of gyration is on average 5 cm during heel strike but increases to 20 cm as the forefoot comes into contact with the ground finally rising to 25 cm at toe off Significantly the applied load

during the fore foot loading phase is more widely distributed than the load being removed A new and unanticipated result that is believed to be a special characteristic of the animate foot The standard deviation of the force under the great toe is the first mechanical parameter to converge in the 54 subjects conclusively verifying the hypothesis that the great toe both initiates and controls gait
