## Limits Of Syntax Vol 29:

Cartography and Explanatory Adequacy Ángel J. Gallego, Dennis Ott, 2024-09-11 This book contributes to the ongoing empirical conceptual and meta theoretical debates regarding the merits and drawbacks of the cartographic program in linguistic theory Although cartography has its roots in the study of the left periphery its empirical scope has expanded significantly over the years and now covers a wide range of domains such as argument structure modification and constituent order The chapters in this volume offer a critical examination of the cartographic assumption that there is a rich array of functional projections whose hierarchical order is fixed and determined by Universal Grammar They discuss the nature of these cartographic hierarchies and their relation to the central theoretical goal of explanatory adequacy are functional hierarchies an irreducible property of Universal Grammar hence constituting part of the residue beyond the scope of principled explanation or are they emergent deriving from independent principles that do not require a further enrichment of Universal Grammar

**Diachronic Studies on Information Structure** Gisella Ferraresi, Rosemarie Lühr, 2010-08-31 In the last few years a lively discussion on information packaging has arisen where traditional dichotomies Theme Rheme Topic Comment and Focus Background have been taken up again and partly reinterpreted The discussion is mainly being held in syntax but also in the fields of semantics and pragmatics Some remarkable progress has been made especially in Focus phonology Even if the role of information conveying and information packaging in the Indoeuropean languages was hinted at as early as in the classical studies of the Neogrammarians this field has remained neglected in today s historical linguistics This volume tries to partly cover this lack with a sample of papers which offer a various range of new empirical data analyzed from the point of view of information structure The novelty of the papers consists in the modern theoretical perspective from which the data are analyzed and in the various phenomena considered which range from the rise of clitic elements to word order change and verb movement Editorial board Dr habil Kai Alter Newcastle University Medical School Prof Dr Ulrike Demske Universit t des Saarlandes Prof Dr Ewald Lang Humboldt Universit t zu Berlin Prof Dr Rosemarie L hr Friedrich Schiller Universit t Jena Prof Dr Thomas Pechmann Universit t Leipzig Prof em Dr Anita Steube Universit t Leipzig

**The Oxford Handbook of Experimental Semantics and Pragmatics** Chris Cummins, Napoleon Katsos, 2019-03-19 This handbook is the first to explore the growing field of experimental semantics and pragmatics In the past 20 years experimental data has become a major source of evidence for building theories of language meaning and use encompassing a wide range of topics and methods Following an introduction from the editors the chapters in this volume offer an up to date account of research in the field spanning 31 different topics including scalar implicatures presuppositions counterfactuals quantification metaphor prosody and politeness as well as exploring how and why a particular experimental method is suitable for addressing a given theoretical debate The volume s forward looking approach also seeks to actively identify questions and methods that could be fruitfully combined in future experimental research Written in a clear and accessible

style this handbook will appeal to students and scholars from advanced undergraduate level upwards in a range of fields including semantics and pragmatics philosophy of language psycholinguistics computational linguistics cognitive science and neuroscience     Final Particles Sylvie Hancil,Alexander Haselow,Margje Post,2015-04-24 This volume brings together sixteen in depth studies of final particles in various languages of the world offering a rich variety of approaches to this still relatively underresearched class of elements The volume is of interest to typologists to experts in syntax and the analysis of spoken language and to linguists studying the form and function of final particles in single languages Final particles offers an overview of the different types of final particles found in typologically distinct languages different methodological approaches to the study of final particles and of typical grammaticalization pathways that these elements have taken in different languages

**The Oxford Handbook of Pragmatics** Yan Huang,2017-01-26 This volume brings together distinguished scholars from all over the world to present an authoritative thorough and yet accessible state of the art survey of current issues in pragmatics Following an introduction by the editor the volume is divided into five thematic parts Chapters in Part I are concerned with schools of thought foundations and theories while Part II deals with central topics in pragmatics including implicature presupposition speech acts deixis reference and context In Part III the focus is on cognitively oriented pragmatics covering topics such as computational experimental and neuropragmatics Part IV takes a look at socially and culturally oriented pragmatics such as politeness impoliteness studies cross and intercultural and interlanguage pragmatics Finally the chapters in Part V explore the interfaces of pragmatics with semantics grammar morphology the lexicon prosody language change and information structure The Oxford Handbook of Pragmatics will be an indispensable reference for scholars and students of pragmatics of all theoretical stripes It will also be a valuable resource for linguists in other fields including philosophy of language semantics morphosyntax prosody psycholinguistics and sociolinguistics and for researchers and students in the fields of cognitive science artificial intelligence computer science anthropology and sociology     Discourse Function & Syntactic Form in Natural Language Generation Cassandre Creswell,2004-12-24 Interest in statistical natural language generation is rapidly increasing This work sheds important light from theoretical linguistics on the type of information crucial to statistical NLG algorithms     *Semantics versus Pragmatics* Zoltan Gendler Szabo,2005-01-06 to follow

**Significance in Language** Jim Feist,2022-01-19 This book offers a unique perspective on meaning in language broadening the scope of existing understanding of meaning by introducing a comprehensive and cohesive account of meaning that draws on a wide range of linguistic approaches The volume seeks to build up a complete picture of what meaning is different types of meaning and different ways of structuring the same meaning across myriad forms and varieties of language across such domains such as everyday speech advertising humour and academic writing Supported by data from psycholinguistic and neurolinguistic research the book combines different approaches from scholarship in semantics including formalist structuralist cognitive functionalist and semiotics to demonstrate the ways in which meaning is expressed

in words but also in word order and intonation The book argues for a revised conceptualisation of meaning toward presenting a new perspective on semantics and its wider study in language and linguistic research This book will appeal to scholars interested in meaning in language in such fields as linguistics semantics and semiotics The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

**Information Structure in Sign Languages** Vadim Kimmelman, 2019-02-19 This book presents a first comprehensive overview of existing research on information structure in sign languages Furthermore it is combined with novel in depth studies of Russian Sign Language and Sign Language of the Netherlands The book discusses how topic focus and contrast are marked in the visual modality and what implications this has for theoretical and typological study of information structure Such issues as syntactic and prosodic markers of information structure and their interactions relations between different notions of information structure and grammaticalization of markers of information structure are highlighted Empirical studies of the two sign languages also showcase different methodologies that are used in such research and discuss their advantages and disadvantages The book contains a general introduction to the field of information structure and thus can be used by linguists new to the field

**Approaches to Language: Data, Theory, and Explanation** Ángel J. Gallego, Aritz Irurtzun, 2020-12-24 The study of language has changed substantially in the last decades In particular the development of new technologies has allowed the emergence of new experimental techniques which complement more traditional approaches to data in linguistics like informal reports of native speakers judgments surveys corpus studies or fieldwork This move is an enriching feature of contemporary linguistics allowing for a better understanding of a phenomenon as complex as natural language where all sorts of factors internal and external to the individual interact Chomsky 2005 This has generated some sort of divergence not only in research approaches but also in the phenomena studied with an increasing specialization between subfields and accounts At the same time it has also led to subfield isolation and methodological a priori with some researchers even claiming that theoretical linguistics has little to offer to cognitive science see for instance Edelman Phillips den Dikken Bernstein Tortora Sprouse Schtze Phillips 2013

**Cognitive Models of Speech Processing** Gerry T. M. Altmann, 1997 This collection of papers and abstracts stems from the third meeting in the series of Sperlonga workshops on Cognitive Models of Speech Processing It presents current research on the structure and organization of the mental lexicon and on the processes that access that lexicon The volume starts with discussion of issues in acquisition and consideration of questions such as What is the relationship between vocabulary growth and the acquisition of syntax and How does prosodic information concerning the melodies and rhythms of the language influence the processes of lexical and syntactic acquisition From acquisition the papers move on to consider the manner in which contemporary models of spoken word recognition and production can map onto neural models of the recognition and production processes The issue of exactly what is recognised and when is dealt with next the empirical findings suggest that the function of something to which

a word refers is accessed with a different time course to the form of that something This has considerable implications for the nature and content of lexical representations Equally important are the findings from the studies of disordered lexical processing and two papers in this volume address the implications of these disorders for models of lexical representation and process borrowing from both empirical data and computational modelling The final paper explores whether neural networks can successfully model certain lexical phenomena that have elsewhere been assumed to require rule based processes

*Topic and Focus* Chungmin Lee, Matthew Gordon, 2006-12-18 During the 2001 Linguistic Summer Institute at University of California Santa Barbara a group of linguists gathered at a workshop to discuss the expression and role of topicalization and focus from a variety of perspectives phonetic phonological syntactic semantic and pragmatic The workshop was designed to lay the groundwork for collaborative efforts between linguists devoted to the study of meaning and linguists engaged in the quantitative study of intonation This volume contains papers emerging from the Santa Barbara Workshop on Topic and Focus A wide variety of methodologies and research interests related to topic and focus are represented in the papers Some works present results of phonetic studies either acoustic or perceptual on the expression of topic and or focus others examine semantic or pragmatic features of topic and or focus while others are concerned with the interface between intonation and meaning Data from several different languages are represented in the papers including several languages with relatively little documentation particularly in the venue of topic and focus e g Basque Chickasaw Indonesian Polish Taiwanese The broad sample of languages coupled with the wide variety of research topics addressed by the papers promise to enrich our typological understanding of topic and focus phenomena and provide an impetus for further research The following paragraphs offer brief summaries of the papers contained in this volume Gorka Elordieta's paper describes prosodic conditions governing focus in a dialect of Basque with pitch accents

*Linguistic Variation: Structure and Interpretation* Ludovico Franco, Paolo Lorusso, 2019-12-16 In this volume scholars honor M Rita Manzini for her contributions to the field of Generative Morphosyntax The essays in this book celebrate her career by continuing to explore inter area research in linguistics and by pursuing a broad comparative approach investigating and comparing different languages and dialects

*Shifting the Focus* Daniel Wedgwood, 2021-10-01 How direct is the mapping between linguistic constructions and their interpretations Much less direct than we commonly assume according to Daniel Wedgwood Extending current ideas from frameworks like Relevance Theory and Dynamic Syntax Wedgwood upholds a radical position on modelling linguistic competence the idea of interfacing static syntactic and semantic representations must be abandoned in favour of models of the incremental construction of meaning during parsing which may involve significant pragmatic enrichment In illustration Wedgwood presents a detailed study of a key meeting point of grammar and pragmatics focus in particular its syntactic expression in Hungarian The result is a strikingly simple explanation of a complex set of syntactico semantic phenomena touching on information structure negation quantification and complex predication For its clear and bold theoretical

argumentation and its novel analysis of some notorious data this book will be of interest to all linguists philosophers and computational linguists concerned with the relationships between syntax semantics pragmatics and information structure This book features a broad theoretical perspective It offers a coherent overall picture of syntax semantics and pragmatics and how they inter relate It combines a bold new approach with the insights of existing theory thorough novel analysis of linguistic phenomena that historically occupy an important place in the literature as illustration of a carefully laid out theoretical position It extends and integrates research from a variety of linguistic domains and frameworks It also includes a comprehensive informal discussion as well as a formalised analysis      On the Compositional Nature of States E. Matthew Husband,2012

This monograph pursues a structural analogy between the availability of an existential interpretation in states and the telicity of events Focusing on evidence from both verbal and adjectival predicates it argues that quantization forms the basis of a unified theory of aktionsart and provides a theory in which the availability of an existential interpretation in states is like the telicity of events determined compositionally by the predicate and the quantization of its internal argument Quantization is further argued to reflect the internal temporal constitution of the stages of an individual which is tied to the generation of an existential interpretation This monograph will be of interest to syntacticians and semanticists who are specifically concerned with compositional approaches to eventualities and to those who have a more general interest in the role linguistic theory can play in determining core properties of the mind      *Experiments at the Interfaces* Jeffrey

Runner,2011-11-24 While experimental data collection has been common in psycholinguistics for some time only relatively recently have experimental methods been employed to collect data for research in formal linguistics Experimental methods can be particularly useful for investigating phenomena at the interfaces of the components of grammar where the sources of multiple types of information need to be carefully controlled Experiments at the Interfaces edited by Jeffrey T Runner from the University of Rochester brings together recent experimental research examining a variety of issues within syntax and semantics and their interfaces with each other and with other domains of language The volume showcases a wide range of experimental methods and illustrates how they can be applied to critical questions relevant to formal linguistics Contributors are Sergey Avrutin Molly Diesing Sam Featherston Micah B Goldwater Martin Hackl Justin Halberda Edwin Howard Tim Hunter Arnout W Koornneef Hadas Kotek Ellen F Lau Jeffrey Lidz Darko Odic Colin Phillips Paul Pietroski Eric Reuland Jeffrey T Runner Yasutada Sudo Klaus von Heusinger Matthew W Wagers Hanna Weiland Frank Wijnen Draga Zec

**Current Contents** Institute for Scientific Information (Philadelphia),1998      *The Oxford Handbook of Information Structure* Caroline Féry,Shinichiro Ishihara,2016-08-25 This book provides linguists with a clear critical and comprehensive overview of theoretical and experimental work on information structure Leading researchers survey the main theories of information structure in syntax phonology and semantics as well as perspectives from psycholinguistics and other relevant fields Following the editors introduction the book is divided into four parts The first on theories of and theoretical

perspectives on information structure includes chapters on focus topic and givenness Part 2 covers a range of current issues in the field including quantification dislocation and intonation while Part 3 is concerned with experimental approaches to information structure including language processing and acquisition The final part contains a series of linguistic case studies drawn from a wide variety of the world s language families This volume will be the standard guide to current work in

information structure and a major point of departure for future research      **Unbounded Dependency Constructions** Rui P. Chaves, Michael T. Putnam, 2020-12-15 This book is about one of the most intriguing features of human communication systems the fact that words that go together in meaning can occur arbitrarily far away from each other In the sentence This is technology that most people think about but rarely consider the implications of the word technology is interpreted as if it were simultaneously next to the words about and of This kind of long distance dependency has been the subject of intense linguistic and psycholinguistic research for the last half century and offers a unique insight into the nature of grammatical structures and their interaction with cognition The constructions in which these unbounded dependencies arise are remarkably difficult to model and come with a rather puzzling array of constraints that have often defied characterization or proper explanation This work provides a detailed survey of these constructions and the factors responsible for their creation and comprehension describes new experimental evidence that sheds light on the nature of the phenomenon and suggests new avenues for future research The volume will be of interest to graduate students and researchers in the fields of morphosyntax psycholinguistics and cognitive science      *The Oxford Handbook of Contemporary Philosophy of Language*

Una Stojnić, Ernie Lepore, 2024-12-27 The Oxford Handbook of Contemporary Philosophy of Language introduces readers to the main issues and theories in the philosophy of language as currently practised Written by leading researchers and covering the central topics in the contemporary philosophical study of language the twenty seven chapters provide an overview of the state of the art and a presentation of cutting edge developments Topics covered include the nature of language the nature and role of semantic and attitudinal content the dynamics of communication and speech acts meta semantics and reference grounding tense and modality discourse dynamics and information structure and the expressive evaluative subjective and social aspects of language Although some of the articles focus directly on technical issues following the recent approach of linguistically oriented philosophy of language the majority of the contributions are primarily focused on foundational questions drawn from traditional philosophy of language The volume offers a reconsideration of these foundational issues in a new light while still bearing in mind the formal developments in recent literature as well as a presentation of new foundational issues that have emerged as a result of these developments
