Factorization Theory Of Meromorphic Functions:

Fix-points And Factorization Of Meromorphic Functions: Topics In Complex Analysis Chung-chun Yang, Qitai Zhuang, 1990-01-01 The fix points and factorization of meromorphic functions have become two research topics that have attracted many complex analysts attention throughout the world notably in U S China and Japan The first two chapters reintroduce Nevanlinna s theory of meromorphic functions and Montel s normal families theory for entire functions Based on these several theorems on fix points were derived The last two chapters introduce the factorization theory and the relationships between the fix points and factorization many recent results in factorization theory were reported and related open questions were raised for further study This book provides a timely introduction to some of the topics that are currently pursued by many complex analysts For instance the fix points of iterates of functions is closely related to the fractal mathematics which has just been realized to be useful in many branches of engineering and physics as well as in computer graphics

Factorization Theory of Meromorphic Functions, and Related Topics Chung-Chun Yang, 1982 **Further Results on Factorization Theory of Meromorphic Functions** , In this thesis we shall prove some results which in turn will allow us to solve some factorization problems in a systematic way Also we shall utilize new methods from theory of complex analytic sets and local holomorphic dynamics to solve some factorization problems In Chapter 3 by using an extended version of Steinmetz s theorem we prove that certain class of meromorphic functions is pseudo prime Hence we can prove that under certain conditions $R \circ H$ is pseudo prime where R is a non constant rational function and H is a finite order periodic function In Chapter 4 we try to find out all possible factorizations of $p \circ H$ when H is an exponential type periodic function and p is a non constant polynomial This confirms a conjecture of G D Song and C C Yang In Chapter 5 we shall use results from theory of complex analytic sets to prove certain criteria on the existence of a non linear entire common right factor of two entire functions Applying these criteria we can then prove that if f is an entire function which is pseudo prime and not of the form $H \circ Q$ where H is a periodic entire function and Q is a polynomial then $R \circ f$ is also pseudo prime for any non

constant rational function R This result essentially solves a problem of G D Song and is a fundamental property of pseudo prime function We also give other applications of these criteria to unique factorization problems In Chapter 6 we consider the unique factorization problems of $f \circ p$ and $p \circ f$ where f is a prime transcendental entire function and p is prime polynomial We shall use methods from local holomorphic dynamics to solve these problems *Factorization of Meromorphic Functions* Fred Gross,1973 Hypercomplex Analysis Irene Sabadini,Michael Shapiro,Franciscus Sommen,2009-04-21 Contains selected papers from the ISAAC conference 2007 and invited contributions This book covers various topics that represent the main streams of research in hypercomplex analysis as well as the expository articles It is suitable for researchers and postgraduate students in various areas of mathematical analysis **Factorization in Integral Domains** Daniel Anderson,2017-11-13 The contents in this work are taken from both the University of Iowa s Conference on Factorization in Integral Domains and the 909th Meeting of the American Mathematical Society s Special Session in Commutative Ring Theory held in Iowa City The text gathers current work on factorization in integral domains and monoids and the theory of divisibility emphasizing possible different lengths of factorization into irreducible elements Nevanlinna Theory and Complex Differential Equations Ilpo Laine,2011-06-01 The series is devoted to the publication of monographs and high level textbooks in mathematics mathematical methods and their applications Apart from covering important areas of current interest a major aim is to make topics of an interdisciplinary nature accessible to the non specialist The works in this series are addressed to advanced students and researchers in mathematics and theoretical physics In addition it can serve as a guide for lectures and seminars on a graduate level The series de Gruyter Studies in Mathematics was founded ca 30 years ago by the late Professor Heinz Bauer and Professor Peter Gabriel with the aim to establish a series of monographs and textbooks of high standard written by scholars with an international reputation presenting current fields of research in pure and applied mathematics While the editorial board of the Studies has changed with the years the aspirations of the Studies are unchanged In times of rapid growth of mathematical knowledge carefully written monographs and textbooks written by experts are needed more than ever not least to pave the way for the next generation of mathematicians In this sense the editorial board and the publisher of the Studies are devoted to continue the Studies as a service to the mathematical community Please submit any book proposals to Niels Jacob **Uniqueness Theory of Meromorphic Functions** Chung-Chun Yang,Hong-Xun Yi,2003 *Proceedings Of The Second Asian Mathematical Conference 1995* S Tangmanee,E Schulz,1998-02-17 This proceedings volume covers the main fields of mathematics analysis algebra and number theory geometry and topology combinatorics and graphs applied mathematics numerical analysis and computer mathematics probability and statistics teaching and popularization of mathematics *Asian Mathematical Conference, 1990 - Proceedings Of The Conference* Zhong Li,Kar Ping Shum,Chung-chun Yang,Le Yang,1992-03-31 Number Theory with an Emphasis on the Markoff Spectrum Andrew Pollington,2017-10-05 Presenting the proceedings of a recently held conference
