Spin This! Bill Press, 2002-01-03 We're all familiar with the warning Don't believe everything you see or hear Bill Press the popular co host of CNN's Crossfire will have you wondering whether you should believe anything at all Spin intentional manipulation of the truth is everywhere It's in the White House in the courtrooms in headlines and advertising slogans Even couples on dates not to mention book jackets are guilty of spin Now analyst Bill Press freeze frames the culture of spin to investigate what exactly spin is who does it and why and its impact on American society as a whole Depending upon who is doing it spinning can mean anything from portraying a difficult situation in the best possible light to completely disregarding the facts with the intent of averting embarrassment or scandal Using examples drawn from recent history the Clinton presidency the Florida recount and the Bush White House Press first probes spin's favorite haunt politics In addition to surveying the incarnations of spin in the fields of journalism law and advertising Press also chews on the spin of sex and dating a word that has become the very embodiment of spin Perhaps surprisingly however Press argues that spin isn't all bad and that without it the harsh truths of our times might be too tough to swallow With the same keen sense of humor that helped make CNN's Crossfire television's premier debate show and the limited run of The Spin Room so popular Press turns the tables on the prime purveyors of spin called spin doctors noting some of their biggest guffaws and blunders As Press notes it has become abundantly clear that the twenty first century beginning as it has with a president who was spun into office will be a fertile stomping ground for spin

active controversies for all readers **Physics Fixes All the Facts** Liam Graham, 2025-01-16 Complex systems seem to magically emerge from the interactions of their parts A whirlpool emerges from water molecules A living cell from organic molecules You emerge from the cells of your body Not since chaos has a concept from physics spread like wildfire to other disciplines Emergence can be found from chemistry to economics from psychology to ecology At its heart is the alluring idea that there s more to the world than physics that there is a holistic component to nature an edge of mystery Physics Fixes All the Facts starts by taking you on a tour through a fascinating world of complexity exploring phenomena from the inside of an atomic nucleus to bacterial behaviour to the ability of your thoughts to affect the world These examples are used along with a thorough exploration of the philosophical literature to untangle the notoriously poorly defined concept of emergence This reveals something surprising the term emergence is redundant In its weak form it is so weak that it applies to everything In its strong form it is so restrictive that it is like the belief that there are pixies in your garden impossible to exclude but not worth spending your time on Emergence either applies to all systems or to none Rather than telling us something about the nature of the world it is an illusion an artefact of our cognitive limitations The past decade has seen a dozen or so monographs and collections about emergence almost all resolutely supportive of the concept This book aims to redress the balance But it is more than just a campaign against the idea of emergence Graham presents a framework called Austere Physicalism and argues that it is the only coherent way to view the world He uses this framework to reinterpret so called emergent phenomena and investigates its wider implications for science In this radically materialist view we are nothing but physical systems among others Physics Fixes All the Facts ends by exploring what this means for our sense of free will and consciousness The book will appeal to academics in fields which use the concepts of complexity or emergence Scientists and philosophers alike will find unexpected and exciting ideas in these pages But the target audience is much broader including students who want to add context to their studies and the intellectually curious with some scientific background
