Fuzzy Approach To Reasoning And Decision Making:

Fuzzy Approach to Reasoning and Decision-Making Vilém Novák, 1992 The papers presented at the Symposium focused mainly on two fields of interest First there were papers dealing with the theoretical background of fuzzy logic and with applications of fuzzy reasoning to the problems of artificial intelligence robotics and expert systems Second quite a large number of papers were devoted to fuzzy approaches to modelling of decision making situations under uncertainty and vagueness and their applications to the evaluation of alternatives system control and optimization Apart from that there were also some interesting contributions from other areas like fuzzy classifications and the use of fuzzy approaches in quantum physics This volume contains the most valuable and interesting papers presented at the Symposium and will be of use to all those researchers interested in fuzzy set theory and its applications

Fuzzy Approach to Reasoning and Decision-making Vilém Novák, 1992 **Soft Computing and Intelligent Systems** Madan M. Gupta, 1999-10-28 The field of soft computing is emerging from the cutting edge research over the last ten years devoted to fuzzy engineering and genetic algorithms The subject is being called soft computing and computational intelligence With acceptance of the research fundamentals in these important areas the field is expanding into direct applications through engineering and systems science This book cover the fundamentals of this emerging field as well as direct applications and case studies There is a need for practicing engineers computer scientists and system scientists to directly apply fuzzy engineering into a wide array of devices and systems

Fuzzy Reasoning in Decision Making and Optimization Christer Carlsson,Robert Fuller,2012-08-27 Many decision making tasks are too complex to be understood quantitatively however humans succeed by using knowledge that is imprecise rather than precise Fuzzy logic resembles human reasoning in its use of imprecise information to generate decisions Unlike classical logic which requires a deep understanding of a system exact equations and precise numeric values fuzzy logic incorporates an alternative way of thinking which allows modeling complex systems using a higher level of abstraction originating from our knowledge and experience Fuzzy logic allows expressing this knowledge with subjective concepts such as very big and a long time which are mapped into exact numeric ranges Since knowledge can be expressed in a more natural way by using fuzzy sets many decision and engineering problems can be greatly simplified Fuzzy logic provides an inference morphology that enables approximate human reasoning capabilities to be applied to knowledge based systems The theory of fuzzy logic provides a mathematical strength to capture the uncertainties associated with human cognitive processes such as thinking and reasoning The conventional approaches to knowledge representation lack the means for representing the meaning of fuzzy concepts As a consequence the approaches based on first order logic do not provide an appropriate conceptual framework for dealing with the representation of commonsense knowledge since such knowledge is by its nature both lexically imprecise and non categorical

Intelligent Systems and Soft Computing Behnam Azvine,Nader Azarmi,Detlef D. Nauck,2006-12-30 Artificial intelligence has traditionally focused on solving human centered problems like natural language processing or common sense reasoning On the other hand for a while now soft computing has been applied successfully in areas like pattern recognition clustering or automatic control The papers in this book explore the possibility of bringing these two areas together This book is unique in the way it concentrates on building intelligent software systems by combining methods from diverse disciplines such as fuzzy set theory neuroscience agent technology knowledge discovery and symbolic artificial intelligence The first part of the book focuses on foundational aspects and future directions the second part provides the reader with an overview of recently developed software tools for building flexible intelligent systems the final section studies developed applications in various fields

Mathematical Modelling for Sustainable Development Marion Hersch,2006-01-02 This reference offers both a basic introduction and advanced technical details of available mathematical and computing methods for modeling sustainable development closing an existing gap in this field as well as illustrating their use through case studies and examples The methods and case studies presented here are targeted at sustainable development although they have a wide range of other applications including economics medicine and control systems

Integrating Soft Computing into Strategic Prospective Methods Raúl

Trujillo-Cabezas, José Luis Verdegay, 2019-08-28 This book discusses how to build optimization tools able to generate better future studies. It aims at showing how these tools can be used to develop an adaptive learning environment that can be used for decision making in the presence of uncertainties. The book starts with existing fuzzy techniques and multicriteria decision making approaches and shows how to combine them in more effective tools to model future events and take therefore better decisions. The first part of the book is dedicated to the theories behind fuzzy optimization and fuzzy cognitive map while the second part presents new approaches developed by the authors with their practical application to trend impact analysis, scenario planning and strategic formulation. The book is aimed at two groups of readers interested in linking the future studies with artificial intelligence. The first group includes social scientists seeking for improved methods for strategic prospective. The second group includes computer scientists and engineers seeking for new applications and current developments of Soft Computing methods for forecasting in social science but not limited to this. Human and Machine Perception 3

Virginio Cantoni, Vito di Gesù, Alessandra Setti, Domenico Tegolo, 2012-12-06 The following are the proceedings of the Fourth International Workshop on Human and Machine Perception held in Palermo, Italy, on June 20-23, 2000, under the auspices of three Institutions: the Cybernetic and Biophysics Group GNCB of the Italian National Research Council CNR and the two Inter-Department Centers of Cognitive Sciences of Palermo and Pavia University respectively. A broad spectrum of topics are covered in this series ranging from computer perception to psychology and physiology of perception. The theme of this workshop on Human and Machine Perception was focused on Thinking, Deciding and Acting. As in the past editions, the final goal has been the analysis and the comparison of biological and artificial solutions. The focus of the lectures has been on presenting the state of the art and outlining open questions. In particular, they sought to stress links suggesting possible synergies between the different cultural areas. The panel discussion has been conceived as a forum for an open debate briefly introduced by each panelist and mainly aimed at deeper investigation of the different approaches to perception and strictly related topics. The panelists were asked to prepare a few statements on hot points as a guide for discussion. These statements were delivered to the participants together with the final program for a more qualified discussion. Applications of Interval Computations

R. Baker Kearfott, V. Kreinovich, 2013-12-01 Primary Audience for the Book: Specialists in numerical computations who are interested in algorithms with automatic result verification. Engineers, scientists and practitioners who desire results with automatic verification and who would therefore benefit from the experience of successful applications. Students in applied mathematics and computer science who want to learn these methods. Goal of the Book: This book contains surveys of applications of interval computations, i.e., applications of numerical methods with automatic result verification that were presented at an international workshop on the subject in El Paso, Texas, February 23-25, 1995. The purpose of this book is to disseminate detailed and surveyed information about existing and potential applications of this new growing field. Brief Description of the Papers: At the most fundamental level, interval arithmetic operations work with sets. The

result of a single arithmetic operation is the set of all possible results as the operands range over the domain For example 0.91129313842 where 3.842×0.911 and $y \in 3.842$ The power of interval arithmetic comes from the fact that i the elementary operations and standard functions can be computed for intervals with formulas and subroutines and ii directed roundings can be used so that the images of these operations e g
