Gaia In Action Science Of The Living Earth:

Gaia in Action Peter Bunyard,1996 James Lovelock s Gaia theory which views the earth as a living organism is widely seen as a vital change in our scientific and cultural outlook on the planet we inhabit As the developed and developing worlds grapple with problems of sustainability on a planetary scale the implications of Gaia theory are both urgent and critically important The contributors include James Lovelock Lynn Margulis Brian Goodwin Mae Wan Ho Peter Saunders Kate Rawles and others They seek to define what is meant by Gaia and to translate the theory into practical ways of relating to the planet as a whole

Gaia's Body Tyler Volk,2012-12-06 If the biosphere really is a single coherent system then it must have something like a physiology It must have systems and processes that perform living functions In *Gaia s Body* Tyler Volk describes the environment that enables the biosphere to exist various ways of looking at its anatomy and physiology the major biogeographical regions such as rainforests deserts and tundra the major substances the biosphere is made of and the chemical cycles that keep it in balance He then looks at the question of whether there are any long term trends in the earth s evolution and examines the role of humanity in Gaia s past and future Both adherents and sceptics have often been concerned that Gaia theory contains too much goddess and too few verifiable hypotheses This is the book that describes for scientists students and lay readers alike the theory s firm basis in science

Raising the Dust Theresa Jones,2018-04-19 *Raising the Dust* explores the relationship between human and ecological health through the lens of African traditional medicine as practiced in the south of Malawi The book employs an ethnographic methodology using the primary methods of semi structured interviews and participant observation The fieldwork for the research was conducted in the Mulanje Mountain Biosphere and the findings are presented as a narrative exploration of insider and outsider positions in this context The conceptual framework for the book encompasses a broad range of ecological ideas focussing mainly on traditional ecological knowledge and radical ecology The holistic theoretical framework for the book emerges in a grounded way from out of the fieldwork experience The book is written in plain language and will appeal to anyone interested in holistic health outlooks particularly cross cultural health and wellbeing narratives

Handbook on Ethics and Marketing Alexander Nill,2015-06-29 Exploring both the theoretical and the applied aspects of the role ethics plays in marketing this Handbook analyzes key issues in order to advance our understanding and provide an overview of the state of the art in this vital field

Animal Others H. Peter Steeves,1999-09-02 Explores questions concerning animals from a continental perspective

Crooked Deals and Broken Treaties John Tully,2016 Draws on contemporary accounts and a wealth of studies to produce this history of the Cuyahoga Valley Tully pays special attention to how settlers notions of private property and the impulse to own and develop the land clashed with more collective social organizations of American Indians He also documents the ecological cost of settlement long before heavy industry laid waste to the region From publisher description

Meaning Of Life And The Universe: Transforming Mae-wan Ho,2017-01-24 The scope of this extraordinary selection of essays distilled from nearly a thousand works that the author has written is literally the entire universe and universe of knowledge It charts the author's quest for the meaning of life faced with a dominant knowledge system she regards as incoherent meaningless and often acting against people and planet She shows how contemporary scientific findings across all disciplines already provide an authentic knowledge system that's coherent with life and the universe The aim is to transform science thoroughly from inspiration to research to applications that work for people and planet This book is simply unique in its scope and content There is no equivalent The author surveys and explains contemporary science in depth ranging over philosophy anthropology quantum physics and chemistry neurobiology psychology genetics and epigenetics cosmology art humanities and mathematics It presents a truly holistic view of nature with profound implications for life in the social political and personal realm

Personal Spirituality Daniel J. Benor,2006 Dr Benor addresses his explorations from the standpoint of an advocate but one who is an open minded explorer neither from a religious nor a conventional medical perspective The breadth and depth of the research reports in this volume on the psychic intuitive and spiritual aspects of healing will engage even the knowledgeable reader This book is destined to take its place among the most influential and controversial in the field of claims reports and experiences of unconventional healing and spiritual awareness

Psychology In India, Volume I: Basic Psychological Processes And Human Development Girishwar Misra,2009-09 Psychology in India Volume I Basic Psychological Processes and Human Development comprises six original essays and analyses research conducted on psychological processes It integrates biological and ecological approaches to the study of behaviour recent research in developmental psychology studies on language acquisition and language processes reading and bilingualism and multilingualism contributions from neuroscience cognitive science and cultural psychology towards the knowledge of cognitive processes research on affective and motivational processes and studying personality Concepts methods and theories have been covered

Ecopsychology Peter H. Kahn (Jr.),Patricia H. Hasbach,2012 This book takes on that

challenge and proposes a reenvisioned ecopsychology **Cooling the Climate** Peter Bunyard, Rob De Laet, 24-11-06 This book highlights an often overlooked factor in climate change water and its movements through ecosystems While greenhouse gases are known to heat the planet the interaction between water plants and the atmosphere plays a much more significant role in regulating and cooling the climate Through processes like photosynthesis and the biotic pump in large forests water cycles stabilize weather and irrigate continents By understanding these dynamics we can confront the climate crisis with new powerful strategies Healthy ecosystems both on land and in oceans are key to stabilizing the climate This book provides the scientific background referencing James Lovelock's Gaia hypothesis and indigenous wisdom to offer a fresh perspective on addressing climate change It proposes strategies for shifting the current climate narrative and outlines the scale and speed of action required to prevent societal collapse The book also offers specific methods for individual and collective action calling for a global movement to regenerate the planet Supported by a Digital Earth platform billions can unite to restore the biosphere and stabilize societies It presents a hopeful roadmap showing how people can take meaningful action to mitigate climate change and build a better future for generations to come **The Anthropocene** Eva Horn, Hannes

Bergthaller, 2019-09-11 The Anthropocene is a concept which challenges the foundations of humanities scholarship as it is traditionally understood It calls not only for closer engagement with the natural sciences but also for a synthetic approach bringing together insights from the various subdisciplines in the humanities and social sciences which have addressed themselves to ecological questions in the past This book is an introduction to and structured survey of the attempts that have been made to take the measure of the Anthropocene and explores some of the paradigmatic problems which it raises The difficulties of an introduction to the Anthropocene lie not only in the disciplinary breadth of the subject but also in the rapid pace at which the surrounding debates have been and still are unfolding This introduction proposes a conceptual map which however provisionally charts these ongoing discussions across a variety of scientific and humanistic disciplines This book will be essential reading for students and researchers in the environmental humanities particularly in literary and cultural studies history philosophy and environmental studies **Gaian Systems** Bruce Clarke, 2020-09-29 A groundbreaking look at Gaia

theory's intersections with neocybernetic systems theory Often seen as an outlier in science Gaia has run a long and varied course since its formulation in the 1970s by atmospheric chemist James Lovelock and microbiologist Lynn Margulis Gaian Systems is a pioneering exploration of the dynamic and complex evolution of Gaia's many variants with special attention to Margulis's foundational role in these developments Bruce Clarke assesses the different dialects of systems theory brought to bear on Gaia discourse Focusing in particular on Margulis's work including multiple pieces of her unpublished Gaia correspondence he shows how her research and that of Lovelock was concurrent and conceptually parallel with the new discourse of self-referential systems that emerged within neocybernetic systems theory The recent Gaia writings of Donna Haraway Isabelle Stengers and Bruno Latour contest its cybernetic status Clarke engages Latour on the issue of Gaia's

systems description and extends his own systems theoretical synthesis under what he terms metabiotic Gaia This study illuminates current issues in neighboring theoretical conversations from biopolitics and the immunitary paradigm to NASA astrobiology and the Anthropocene Along the way he points to science fiction as a vehicle of Gaian thought Delving into many issues not previously treated in accounts of Gaia Gaian Systems describes the history of a theory that has the potential to help us survive an environmental crisis of our own making Slanted Truths Lynn Margulis, Dorion Sagan, 1997-06-20 Lynn Margulis is one of the most successful synthetic thinkers in modern biology This collection of her work enhanced by essays co authored with Dorion Sagan is a welcome introduction to the full breadth of her many contributions EDWARD O WILSON AUTHOR OF THE DIVERSITY OF LIFE An important contribution to the history of the 20th century Read it and you will taste the flavor of real science JAMES LOVELOCK AUTHOR OF GAIA A NEW LOOK AT LIFE ON EARTH Truly inspirational and of fundamental importance This thoughtful series of essays on some of the largest questions concerning the nature of life on earth deserves careful study PETER RAVEN MISSOURI BOTANICAL GARDEN **Global Environmental History** Ian G Simmons, 2008-03-05 Courses which deal with environmental history have long lacked a comprehensive overview I G Simmons has made a significant contribution with a book that looks at the long term history of environment and humanity from 10 000 BC to AD 2000 This far reaching text considers the global picture and recognises the contributions of many disciplines including the natural sciences the social sciences and increasingly the humanities As a starting point this book takes the major phases of human technological evolution of the last 12 000 years and considers how these have affected the natural world It then considers the response to conditions such as climate change putting today s preoccupations into a long term perspective This is a book of history not prophecy and so makes no judgements on current anxieties **Ecocriticism** Greg Garrard, 2004-07-31 This text is one of the first introductory guides to the field of literary ecological criticism It is the ideal handbook for all students new to the disciplines of literature and environment studies ecology and green studies

Science in the Context of Application Martin Carrier, Alfred Nordmann, 2010-11-12 We increasingly view the world around us as a product of science and technology Accordingly we have begun to appreciate that science does not take its problems only from nature and then produces technological applications but that the very problems of scientific research themselves are generated by science and technology Simultaneously problems like global warming the toxicology of nanoparticles or the use of renewable energies are constituted by many factors that interact with great complexity Science in the context of application is challenged to gain new understanding and control of such complexity it cannot seek shelter in the ivory tower or simply pursue its internal quest for understanding and gradual improvement of grand theories Science in the Context of Application will identify explore and assess these changes Part I considers the Changing Conditions of Scientific Research and part II Science Values and Society Examples are drawn from pharmaceutical research the information sciences simulation modelling nanotechnology cancer research the effects of commercialization and many other

fields The book assembles papers from well known European and American Science Studies scholars like Bernadette Bensaude Vincent Janet Kourany Michael Mahoney Margaret Morrison Hans J rg Rheinberger Arie Rip Dan Sarewitz Peter Weingart and others The individual chapters are written to address anyone who is concerned about the role of contemporary science in society including scientists philosophers and policy makers *Calcutta Geographical Review* ,2004 **The Biosphere** Vladimir I. Vernadsky,1998-03-27 Vladimir Vernadsky was a brilliant and prescient scholar a true scientific visionary who saw the deep connections between life on Earth and the rest of the planet and understood the profound implications for life as a cosmic phenomenon DAVID H GRINSPOON AUTHOR OF VENUS REVEALED The Biosphere should be required reading for all entry level students in earth and planetary sciences ERIC D SCHNEIDER AUTHOR OF INTO THE COOL THE NEW THERMODYNAMICS OF CREATIVE DESTRUCTION
