Hybridomas in Cancer Diagnosis and Treatment Malcolm S. Mitchell, Herbert F. Oettgen, 1982-01-01 **Cancer Treatment Symposia**, 1985 **Biological Responses in Cancer** Enrico Mihich, 2013-03-09 The series of volumes entitled **Biological Responses in Cancer Progress toward Potential Applications** provides information on approaches through which the interaction between neoplastic and normal cells may be modified Each annual volume contains contributions in areas where significant progress has been made Topics to be dealt with include immunologic and host defense systems control mechanisms of cell and population growth cell differentiation and cell transformation The regulatory mechanisms controlling the interactions between normal and tumor cells may be immunologic in nature or they may relate to diverse biological characteristics of tumor and normal cells and their response to micro environmental factors While the central question of tumor immunology addresses the nature and uniqueness of tumor associated antigens in humans the identification of the stages of differentiation and functions of the various cell types involved in immunity is advancing rapidly The development of monoclonal antibody methodologies together with progress in the biochemical characterization of cell markers cell separation and measurement of cell functions has significantly aided in the identification and quantitation of different cell types Establishing the role of these cells in the regulation of human immune mechanisms offers a means for evaluating the status of the immune responses in cancer patients and for assessing the effects that tumor and antitumor treatments may exert on their functionality which in turn may alter the effects of antitumor treatments **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1982 **JNCI, Journal of the National Cancer Institute** National Cancer Institute (U.S.), 1986 Current Catalog National Library of Medicine (U.S.), 1982 First multi year cumulation covers six years 1965-70 **Methods of Hybridoma Formation** Arie H. Bartal, Yashar Hirshaut, 2012-12-06 Laymen often consider modern laboratory research to be based on an endless array of sophisticated technologies whose complex capabilities are as important to the outcome of any project as the inventiveness and creativity of the scientists who employ them Scientists at times may share this point of view until they are confronted by unexpected findings that demand new approaches and they discover that yesterday's sophisticated tools are today's blunt instruments This experience provides a more sobering view of the current state of our scientific methods It also serves as an impetus for the further development of technology that prepares us for the next stage of advance Immunologists were confronted by such a technological crises in the late 1970s when they finally were forced to admit that polyclonal antibodies although quite sensitive reagents were not specific enough to answer many of the questions then confronting virologists and tumor biologists The answer to the need for specificity came with the development of monoclonal antibody technology In the last ten years there have been considerable advances in monoclonal antibody techniques Today these reagents are much more versatile than they were initially and can be applied to a broad range of problems Still most workers who are using these antibodies are convinced

that their potential is far from exhausted and that at least in some fields we are currently in the early stages of learning how to use them properly Journal of the National Cancer Institute ,1995-05 **Clinical and Biological Evaluation of the Immunomodifiers** ,1985 *JNCI, Journal of the National Cancer Institute* National Cancer Institute (U.S.),1986
