Sherwin, G. J. Weston, 2016-05-13 Chemistry of the Non Metallic Elements is concerned with the non metals and is to be read in conjunction with The Chemistry of the Metallic Elements by D M McC Steele The object has not been to provide an encyclopedic coverage of all the chemical reactions of non metals but rather to select those which will enable the student to appreciate better the similarities and differences between the elements The book discusses the chemistry of the non metals in relation to their positions in the periodic groups It covers the noble gases hydrogen the halogens Group VIB oxygen sulfur Group VB nitrogen phosphorus carbon and silicon Where the groups contain metals as in Group IVA their chemistry is briefly discussed to show the properties which occur This book provides a comprehensive treatment of chemistry at the intermediate level that is the sixth form first year university level Readers are assumed to have a background of O level chemistry and of O or A level physics and a working knowledge of elementary mathematics      **Inorganic chemistry, non-metallic & metallic elements, revised by J. Castell-Evans** Raphael Meldola, 1901      **The Chemistry of the Metallic Elements** David J. Steele, 2017-05-04 The Chemistry of the Metallic Elements provides a concise yet comprehensive discussion of the structural principles of metallic elements The book also provides tables that layout the data concerning the more common metals and their compounds The text first covers the general information about the metallic elements such as their physical properties chemical properties occurrence and extraction The subsequent chapters detail the elements and their compounds in context to their structure and position in the periodic table and in the electrochemical series The book will be of great use to researchers and practitioners of chemistry and chemical engineering      **Proceedings of the American Pharmaceutical Association at the Annual Meeting** American Pharmaceutical Association. **Chemistry of the Elements** N. N. Greenwood, A. Earnshaw, 2012-12-02 When this innovative textbook first appeared in 1984 it rapidly became a great success throughout the world and has already been translated into several European and Asian languages Now the authors have completely revised and updated the text including more than 2000 new literature references to work published since the first edition No page has been left unaltered but the novel features which proved so attractive have been retained The book presents a balanced coherent and comprehensive account of the chemistry of the elements for both undergraduate and postgraduate students This crucial central area of chemistry is full of ingenious experiments intriguing compounds and exciting new discoveries The authors specifically avoid the term inorganic chemistry since this evokes an outmoded view of chemistry which is no longer appropriate in the final decade of the 20th century Accordingly the book covers not only the inorganic chemistry of the elements but also analytical theoretical industrial organometallic bio inorganic and other cognate areas of chemistry The authors have broken with recent tradition in the teaching of their subject and adopted a new and highly successful approach based on descriptive chemistry The chemistry of the elements is still discussed within the context of an underlying theoretical framework giving cohesion and structure to the text but at all times the chemical facts are emphasized Students are invited to enter the exciting world of chemical phenomena with a sound knowledge and understanding of the subject to approach experimentation with an open mind and to assess observations reliably This is a book that students will not only value during their formal education but will keep and refer to throughout their careers as chemists Completely revised and updated Unique approach to the subject More comprehensive than competing titles *Elementary inorganic chemistry, the non-metallic elements* Raphael Meldola, 1873
