

Fighting water scarcity in the Arab countries

The Arab countries account for more than 5 per cent of the world's population, but less than 1 per cent of global water resources. And as a consequence of the phenomena associated with climate change, the region is facing an even greater water shortage.

For 30 years now, IFAD and its partners in the region have worked to develop effective, replicable solutions to help poor rural communities manage their scarce water resources. More than half of IFAD's programmes and projects in the region include a focus on water.

IFAD's integrated approach supports water infrastructure development, rational use of available surface water and groundwater resources, whether fresh, brackish or saline, and promotes recycling grey water in marginal areas. Improved small-scale irrigation technologies, effective rain harvesting techniques, appropriate conservation infrastructure and improved varieties of drought-resistant seeds also help poor rural people cope with increasing water scarcity.

Current situation

Water supplies in the Arab countries are under severe stress. Demographic growth (2.6 per cent), economic growth, urbanization, industrialization and the expansion of irrigated agricultural lands have all contributed to a dramatic and unsustainable increase in water consumption over the past few decades. Frequent droughts, in conjunction with an overuse of groundwater and major aquifers, have greatly reduced the availability of both renewable and non-renewable water resources.

Resources and Hydrometeorology of the Arab Region Mamdouh Shahin,2007-05-10 The great importance of detailed data and their use in generating interdisciplinary scientific knowledge on the development and utilisation of the water systems of the Arab region with its widespread water stress and desert areas is well established With increasing consumption of water in the region backed up by the growing population the per capita availability of freshwater in the coming years is expected to cause severe scarcity unless some fundamental and anticipatory changes are introduced in the management of their water systems Towards that end such a rich book will prove to be a great help The book is the last one written by the author and the depth of data presentation and analysis clearly indicates the professional maturity with which it has been written Accordingly the book is the final expression of the lifelong work and scholarship of Professor Mamdouh Shahin The Arab Region has been the home of some of the earliest human civilisations and their history is also a continuum of human endeavours towards ensuring the access to water over an expanding space and time The presentation of the important elements of history of the region as related to water will prove to be a rich reference **World Water Resources at the**

(Three-Volume Set) Saeid Eslamian,2018-10-03 While most books examine only the classical aspects of hydrology this three volume set covers multiple aspects of hydrology and includes contributions from experts from more than 30 countries It examines new approaches addresses growing concerns about hydrological and ecological connectivity and considers the worldwide impact of climate change **Water Resources of Lebanon** Amin Shaban,2020-07-06 Water has become a

challenging resource that many countries worldwide are concerned with. Thus water is often linked with health, society, development, national income, and even international geo-politics. Sometimes water resources are unavailable but successful management involves developing approaches and projects to assure water supply. However, there are some countries with available water resources but unsatisfactory management and thus complain about water supply becoming a national problem. This situation is prevalent in Lebanon, a country characterized by abundant water resources, whether on the surface or sub-surface. It is a paradox that there is still imbalance in water supply demand in Lebanon and water resources are now under stress due to chaotic use. This has been exacerbated by the oscillating climatic conditions, increased population, and improper management. Therefore, people receive less than one third of their water needs and most water supplied is of poor quality. The current status shows a descending trend. Undoubtedly, if the water sector in Lebanon continues this way, we should anticipate unfavourable and may be severe consequences. Many studies have been conducted on water and related disciplines in Lebanon, however, all of them focus on specific themes and sometimes defined regions. Nevertheless, the occurred changes on the influencers, natural and man-made, have not been considered. This book is the first of its type for Lebanon and it shows all aspects of water resources with updated measurements and findings obtained by adopting new techniques. It diagnoses in depth the major elements of water flow storage mechanism that have never been covered in such a comprehensive manner before. Also, this book introduces and analyses the existing challenges and proposes solutions. It represents a comprehensive investigation of the water resources in Lebanon.

The Water, Energy, and Food Security Nexus in the Arab Region Kamel Amer, Zafar Adeel, Benno Böer, Walid Saleh, 2016-12-01. This book investigates the need for a more open and interdisciplinary dialogue on the nexus of food, water, and energy security in the Arab region. It argues that achieving sustainable economic development is irretrievably tied to the security of the water-energy-food nexus, which is in turn essential for bringing about sustained peace. Further, it discusses various approaches to achieving these lofty objectives and offers the following take-away messages: The Arab region is currently under considerable water stress and the situation will continue to get worse with a number of global changes, most notably those related to climate and regional water distribution. Viable solutions are available in the Arab region and can be implemented through innovative policies, judicious use of new technologies, and stimulating public opinion. Integration across water, energy, and food sectors is obviously needed but achieving it in practice is extremely challenging. There are some gaps in the scientific understanding but at the same time, there is a wealth of data and synthesized information that can guide decision making.

Water Management, Purification, and Conservation in Arid Climates Mattheus F. A. Goosen, Walid H. Shayya, 2000-01-05. This three-volume series presents a broad and integrated approach to water management, purification, and conservation in arid climates. Volume one includes an introductory chapter on water problems and water resources in arid climates, followed by specific chapters covering various aspects of water management. Volumes two and three deal with water purification and water conservation respectively. Many

textbooks on water issues normally deal with only one of these areas This series covers all three areas with an emphasis on the problems faced by arid regions The three volume series will appeal to industry specialists in desalination and wastewater treatment irrigation engineers graduate and undergraduate students in hydrology water management and conservation professionals government personnel involved in water resources development decision makers environmentalists employees of the petrochemical industry and individuals wishing to specialize in water management purification and conservation
