How To Make Neural Networks Work Tips And Tricks Of The Trade:

   Neural Networks: Tricks of the Trade Grégoire Montavon,Geneviève Orr,Klaus-Robert Müller,2012-11-14 The twenty last years have been marked by an increase in available data and computing power In parallel to this trend the focus of neural network research and the practice of training neural networks has undergone a number of important changes for example use of deep learning machines The second edition of the book augments the first edition with more tricks which have resulted from 14 years of theory and experimentation by some of the world s most prominent neural network researchers These tricks can make a substantial difference in terms of speed ease of implementation and accuracy when it comes to putting algorithms to work on real problems   Neural Networks: Tricks of the Trade Genevieve B. Orr,Klaus-Robert Müller,2003-07-31 It is our belief that researchers and practitioners acquire through experience and word of mouth techniques and heuristics that help them successfully apply neural networks to di cult real world problems Often these tricks are theo tically well motivated Sometimes they are the result of trial and error However their most common link is that they are usually hidden in people s heads or in the back pages of space constrained conference papers As a result newcomers to the eld waste much time wondering why their networks train so slowly and perform so poorly This book is an outgrowth of a 1996 NIPS workshop called Tricks of the Trade whose goal was to begin the process of gathering and documenting these tricks The interest that the workshop generated motivated us to expand our collection and compile it into this book Although we have no doubt that there are many tricks we have missed we hope that what we have included will prove to be useful particularly to those who are relatively new to the eld Each chapter contains one or more tricks presented by a given author or authors We have attempted to group related chapters into sections though we recognize that the di erent sections are far from disjoint Some of the chapters e g 1 13 17 contain entire systems of tricks that are far more general than the category they have been placed in   **Modeling Complexity in Economic and Social Systems** Frank Schweitzer,2002 Economics and the social sciences are in fact the hard sciences as Herbert Simon argued because the complexity of the problems dealt with cannot simply be reduced to analytically solvable models or decomposed into separate subprocesses Nevertheless in recent years the emerging interdisciplinary sciences of complexity have provided new methods and tools for tackling these problems ranging from complex data analysis to sophisticated computer simulations In particular advanced methods developed in the natural sciences have recently also been applied to social and economic problems The twenty one chapters of this book reflect this modern development from various modeling perspectives such as agent based models evolutionary game theory reinforcement learning and neural network techniques time series analysis non equilibrium macroscopic dynamics and for a broad range of socio economic applications market dynamics technological evolution spatial dynamics and economic growth decision processes and agent societies They jointly demonstrate a shift of perspective in economics and the social sciences that is allowing a new outlook in this field to emerge   **Operations Research Proceedings 2001** Peter
